Nothing can take your business to the next level like great search engine optimization (SEO). Unfortunately, it's not always easy to know what will successfully drive traffic, leads, and sales. If you want to stand out from your competition, your SEO needs a distinctive blend of creativity and logic. Maybe you're a marketing manager or executive who is responsible for SEO growth but do not fully understand how it works. Or maybe you are a seasoned SEO

pro looking to optimize further. Either way, this book is your behind-the-scenes guide to online visibility. When it comes to SEO, success often depends not on what you do but on how you do it. That is why Product-Led SEO digs deep into the logic and theory of SEO instead of offering step-by-step guidelines and techniques. You will learn to develop your own best practices and see where most SEO strategies go astray. If your main goal is driving traffic, you are leaving sales on the table.

Invisible Search and Online Search Engines considers the use of search engines in contemporary everyday life and the challenges this poses for media and information literacy. Looking for mediated information is mostly done online and arbitrated by the various tools and devices that people carry with them on a daily basis. Because of this, search engines have a significant impact on the structure of our lives, and personal and public memories. Haider and Sundin consider what this means for society, whilst also uniting research on information retrieval with research on how people actually look for and encounter information. Search engines are now one of society's key infrastructures for knowing and becoming informed. While their use is dispersed across myriads of social practices, where they have acquired close to naturalised positions, they are commercially and technically centralised. Arguing that search, searching, and search engines

have become so widely used that we have stopped noticing them, Haider and Sundin consider what it means to be so reliant on this all-encompassing and increasingly invisible information infrastructure. Invisible Search and Online Search Engines is the first book to approach search and search engines from a perspective that combines insights from the technical expertise of information science research with a social science and humanities approach. As such, the book should be essential reading for academics, researchers, and students working on and studying information science, library and information science (LIS), media studies, journalism, digital cultures, and educational sciences.

"Search Engine Optimization, also known as SEO, is how people search and find your website on the Internet. ... SEO is a key growth channel for your business, but the rules of SEO have changed dramatically in recent years. To grow your business in today's economy, you need a strong online presence. But what does that entail exactly? Marketing is no longer about mass-market advertising and outbound

sales; it's about capturing demand -- grabbing the attention of people already looking to make a purchase or acquire specific knowledge. To do that, your content needs to be at the top of Internet search results"--Amazon.com.

This Special Issue book focuses on the theory and practice of search engine optimization (SEO). It is intended for anyone who publishes content online and it includes five peer-reviewed papers from various researchers. More specifically, the book includes theoretical and case study contributions which review and synthesize important aspects, including, but not limited to, the following themes: theory of SEO, different types of SEO, SEO criteria evaluation, search engine algorithms, social media and SEO, and SEO applications in various industries, as well as SEO on media websites. The book aims to give a better understanding of the importance of SEO in the current state of the Internet and online information search. Even though SEO is widely used by marketing practitioners, there is a relatively small amount of academic

research that systematically attempts to capture this phenomenon and its impact across different industries. Thus, this collection of studies offers useful insights, as well as a valuable resource that intends to open the door for future SEO-related research.

Ever wonder how businesses rank locally when performing a Google Search? I did, so I set off on a mission to uncover a consistent method to help boost a business's local ranking. In my very first publication, Local SEO - A Roadmap To Successful Local Ranking I am going to walk you through some of the best Local SEO techniques to get a business not only discovered locally, but ranked. Whenever you perform a Google Search, Google's algorithm takes over and provides result listings that best match the criteria according to Google's page and domain

ranking factors. For those that don't quite understand ranking factors, let me explain. Each page and domain has a ranking value. These are typically called Page and Domain Authority. The higher the authority the higher the page will rank. Google and other search engines determine a pages rank or authority based on various search metrics including content, keywords, number of backlinks, age of the website, title, header tags, images and so on. For any given localized search, the results are usually broken out by Paid Advertising - Shown at the top and bottom of the listings Local Business listings - Business listings from Google Maps Organic Search Results - Everything else In this book, Local SEO - A Roadmap To Successful Local Ranking, I am focusing on the Local Business Listings and how anyone using my methods can boost their local presence on the web. A little bit about me. My first experience with computers was on Christmas day when I opened up a game called Pong. It was one of the first TV computer games and at the time, it was cutting edge. Fast forward a bit and my dad bought an Atari 800 computer that I somehow convinced him

was better than the Apple alternative. Needless to say, I used the Atari more than he did. Fast forward a bit more and I was in college studying computer science. When I graduated my first real job was programming expert systems. That job only lasted a short while and then I became a System Analyst working on all sorts of Government Projects. In 2008 I moved to a place called Austin and really got my feet wet designing websites for clients. During that time I also became interested in all things SEO, but never really got to flex my muscles. It wasn't until 2016 that I found myself unemployed and wondering what I should do in life. After countless resumes failed to get traction in the job market for positions I was interested in, a realization hit me that maybe I don't need a company to work for, but rather work for myself. My wife Kathleen and our pug Olaf were very supportive of the idea. So I started a company called <http://HangTenSEO.com> with the goal to help clients out rank their competition. Along the way I also started writing articles on SEO best practices, which were in many ways teaching moments for me. In writing the articles I

really had to understand the subjects I was writing about and how to use the techniques to get the best results.
