Why doesn't your home page appear on the first page of search results, even when you query your own name? How do other web pages always appear at the top? What creates these powerful rankings? And how? The first book ever about the science of web page rankings, Google's PageRank and Beyond supplies the answers to these and other questions and more. The book serves two very different audiences: the curious science reader and the technical computational reader. The chapters build in mathematical sophistication, so that the first five are accessible to the general

academic reader. While other chapters are much more mathematical in nature, each one contains something for both audiences. For example, the authors include entertaining asides such as how search engines make money and how the Great Firewall of China influences research. The book includes an extensive background chapter designed to help readers learn more about the mathematics of search engines, and it contains several MATLAB codes and links to sample web data sets. The philosophy throughout is to encourage readers to experiment with the ideas and algorithms in the text. Any business seriously interested in improving its rankings in the major search engines can benefit from the clear examples, sample code, and list of resources provided. Many illustrative examples and entertaining asides MATLAB code Accessible and informal style Complete and self-contained section for mathematics review

Exploring Sociology is a "students first" resource written with millennial students in mind, and with their help. Bruce Ravelli and Michelle Webber, the authors of Exploring Sociology, believe that theory provides the foundation for sociology and that students need to explore both classical and modern theory to grasp the sociological endeavour fully. Accordingly, this text provides the most comprehensive overview of classical and modern social theories of any textbook. This is the first mainstream introductory sociology text to devote an entire chapter to contemporary theory, and the first to integrate postmodern and post-structural theoretical insights meaningfully throughout the book. The authors inspire students to think sociologically , to engage their sociological imaginations, and to foster an appreciation for how social factors such as income level, gender, and minority status influence who they are and the people they become. Through its distinctive approach to the field, its readability, and its relevance to Canadian students' lives, Exploring Sociology: A Canadian Perspective supports professors in developing their students' sociological imaginations and encouraging them to see sociology from multiple perspectives. Rarely does the student, the person who uses the textbook and technology, participate in the writing and development process. For the second edition of Exploring Sociology, students had an opportunity to offer feedback and to have 'their say'. Students offered their suggestions for improvement through anonymous online surveys, manuscript reviews, and in-class evaluations. The authors addressed students' comments with respect to the presentation of theory and the pedagogical features. MySocLab is not included with the purchase of this product. Sentiment analysis research has been started long back and recently it is one of the demanding research topics. Research activities on Sentiment Analysis in natural language texts and other media are gaining ground with full swing. But, till date, no concise set of factors has been yet defined that really affects how writers' sentiment i.e., broadly human sentiment is expressed, perceived, recognized, processed, and interpreted in natural languages. The existing reported solutions or the available systems are still far from perfect or fail to meet the satisfaction level of the end users. The reasons may be that there are dozens of conceptual rules that govern sentiment and even there are possibly unlimited clues that can convey these concepts from realization to practical implementation. Therefore, the main aim of this book is to provide a feasible research platform to our ambitious researchers towards developing the practical solutions that will be indeed beneficial for our society, business and future researches as well.
