 This monograph provides a field-proven approach to analyze industrial production with a cross-company scope as well as regarding all hierarchical system levels of manufacturing enterprises. The book exemplifies this approach in the context of aluminum die casting, and presents a set of measures which allow a 30 percent energy reduction along the value chain. The target audience primarily comprises researchers and experts in the field but the book may also be beneficial for graduate students.

 The two volume-set, LNCS 9215 and LNCS 9216, constitutes the refereed proceedings of the 35th Annual International Cryptology Conference, CRYPTO 2015, held in Santa Barbara, CA, USA, in August 2015. The 74 revised full papers presented were carefully reviewed and selected from 266 submissions. The papers are organized in the following topical sections: lattice-based cryptography; cryptanalytic insights; modes and constructions; multilinear maps and IO; pseudorandomness; block cipher cryptanalysis; integrity; assumptions; hash functions and stream cipher cryptanalysis; implementations; multiparty computation; zero-knowledge; theory; signatures; non-signaling and information-theoretic crypto; attribute-based encryption; new primitives; and fully homomorphic/functional encryption.  
**Life of Vittoria Colonna** Springer Nature  
 This is the first major collection of essays to look at the literature of the entire Tudor period, from the reign of Henry VII to death of Elizabeth I. It pays particularly attention to the years before 1580. Those decades saw, amongst other things, the establishment of print culture and growth of a reading public; the various phases of the English Reformation and process of political centralization that enabled and accompanied them; the increasing emulation of Continental and classical literatures under the influence of humanism; the self-conscious emergence of English as a literary language and determined creation of a native literary canon; the beginnings of English empire and the consolidation of a sense of nationhood. However, study of Tudor literature prior to 1580 is not only of worth as a context, or foundation, for an Elizabethan 'golden age'. As this much-needed volume will show, it is also of artistic, intellectual, and cultural merit in its own right. Written by experts from Europe, North America, and the United Kingdom, the forty-five chapters in *The Oxford Handbook to Tudor Literature* recover some of the distinctive voices of sixteenth-century writing, its energy, variety, and inventiveness. As well as essays on well-known writers, such as Philip Sidney or Thomas Wyatt, the

volume contains the first extensive treatment in print of some of the Tudor era's most original voices.

In this book, Louise Revell examines questions of Roman imperialism and Roman ethnic identity and explores Roman imperialism as a lived experience based around the paradox of

similarity and difference. Her case studies of public architecture in several urban settings provides an understanding of the ways in which urbanism, the emperor and religion were part of the daily encounters of the peoples in these communities. Revell applies the ideas of agency and practice in her examination of the structures that held the empire together and how they were implicated within repeated daily activities. Rather than offering a homogenized "ideal type" description of Roman cultural identity, she uses these structures as a way to understand how these encounters differed between communities and within communities, thus producing a more nuanced interpretation of what it was to be Roman. Bringing an innovative approach to the problem of Romanization, Revell breaks from traditional models and cuts across a number of entrenched debates such as arguments about the imposition of Roman culture or resistance to Roman rule.

Hydrogen Fuel Cells for Road Vehicles addresses the main issues related to the application of hydrogen fuel cell technology in the road transportation sector. A preliminary treatment is given on fuel resources and atmospheric pollution concerns which are closely related to the current technology (internal combustion engine) used for moving people and goods. The authors deal, in particular, with the problems that can hinder a widespread hydrogen market (production, storage and distribution), as well as giving an analysis of fuel cell technologies available for utilization of this energy carrier in the automotive field. Hydrogen Fuel Cells for Road Vehicles also examines the concerns faced during the design and realization of a PEM fuel cell system with optimal size and efficiency, evidencing the impact of the individual auxiliary components on energy losses and dynamic stack performance. The book ends with the analysis of two practical case studies on fuel cell propulsion systems. Hydrogen Fuel Cells for Road Vehicles is a useful text for researchers, professionals and advanced students in the fields of automotive and environmental engineering.
