Hydrogeology, Chemical Weathering, and Soil Formation Letts and Lonsdale

Soils are affected by human activities, such as industrial, municipal and agriculture, that often result in soil degradation and loss. In order to prevent soil degradation and to rehabilitate the potentials of degraded soils, reliable soil data are the most important prerequisites for the design of appropriate land-use systems and soil management practices as well as for a better understanding of the environment. The availability of reliable information on soil morphology and other characteristics obtained through examination and description of the soil in the field is essential, and the use of a common language is of prime importance. These guidelines, based on the latest internationally accepted systems and classifications, provide a complete procedure for soil description and for collecting field data. To help beginners, some explanatory notes are included as well as keys based on simple test and observations.--Publisher's description.

Interpretation of Micromorphological Features of Soils and Regolith, 2nd edition, provides researchers and students with a global tool for interpretation of micromorphological features of regoliths and soils. After an introduction and general overview by the editors, micromorphological aspects of regoliths (e.g. saprolites, unconsolidated sediments, transported materials) are highlighted, followed by a systematic and coherent discussion of the micromorphological expression of various pedogenic processes. This is done by discussing diagnostic horizons, materials and processes. The following topics are also treated: freeze-thaw features, redoximorphic features, calcareous and gypsiferous formations, textural features, spodic and oxic horizons, andic and volcanic materials, organic and surface horizons, laterites, surface crusts, salts, biogenic and inorganic siliceous materials, authigenic silicates, phosphates, thionic and derived materials, and features related to faunal activity. The last chapters address the impact of anthropic activities, with regard to archaeology and palaeopedology. Interpretation of Micromorphological Features of Soils and Regolith, 2nd edition, is written by a team of well-known, global experts in the field who all used a single set of concepts and terminology, making it a valuable interdisciplinary reference. The first exhaustive publication on interpretation of micromorphological features Covers related topics, making micromorphology more attractive and accessible for geographers, archaeologists and quaternary geologists Thematic treatment of a range of soil micromorphology fields broadens the content's applications Authored by a multi-disciplinary team, ensuring thorough coverage of archaeological, geological, and earth science disciplines

Tropical Radioecology is a guide to the wide range of scientific practices and principles of this

multidisciplinary field. It brings together past and present studies in the tropical and sub-tropical areas of the planet, highlighting the unique aspects of tropical systems. Until recently, radioecological models for tropical environments have depended upon data derived from temperate environments, despite the differences of these regions in terms of biota and abiotic conditions. Since radioactivity can be used to trace environmental processes in humans and other biota, this book offers examples of studies in which radiotracers have been used to assess biokinetics in tropical biota. Features chapters, co-authored by world experts, that explain the origins, inputs, distribution, behaviour, and consequences of radioactivity in tropical and subtropical systems. Provides comprehensive lists of relevant data and identifies current knowledge gaps to allow for targeted radioecological research in the future. Integrates radioecological information into the most recent radiological consequences modelling and best-practice probabilistic ecological risk analysis methodology, given the need to understand the implications of enhanced socio-economic development in the world's tropical regions.

Weathering, Soils & Paleosols Physical Geology"Physical Geology is a comprehensive introductory text on the physical aspects of geology, including rocks and minerals, plate tectonics, earthquakes, volcanoes, glaciation, groundwater, streams, coasts, mass wasting, climate change, planetary geology and much more. It has a strong emphasis on examples from western Canada, especially British Columbia, and also includes a chapter devoted to the geological history of western Canada. The book is a collaboration of faculty from Earth Science departments at Universities and Colleges across British Columbia and elsewhere"--BCcampus website.Hydrogeology, Chemical Weathering, and Soil Formation

Mineral Exploration: Principles and Applications, Second Edition, presents an interdisciplinary approach on the full scope of mineral exploration. Everything from grass root discovery, objective base sequential exploration, mining, beneficiation, extraction, economic evaluation, policies and acts, rules and regulations, sustainability, and environmental impacts is covered. Each topic is presented using theoretical approaches that are followed by specific applications that can be used in the field. This new edition features updated references, changes to rules and regulations, and new sections on oil and gas exploration and classification, air-core drilling, and smelting and refining techniques. This book is a key resource for both academics and professionals, offering both practical and applied knowledge in mineral exploration. Offers important updates to the previous edition, including sections on the cyclical nature of mineral industry, exploration for oil and gas, CHIM-electro-geochemical survey, air-core drilling, classification of oil and gas resources, smelting, and refining technologies Presents global case studies that allow readers to quickly apply exploration concepts to real-world scenarios Includes 385 illustrations and photographs to aid the reader in understanding key procedures and applications

This volume is intended to provide an up-to-date overview of the approaches, methodologies and techniques devoted to better understanding of the weathering conditions of rock masses on slopes. According to the local conditions, a variety of slope movements may take place and involve weathered rock masses. Shallow and rapid soil slips evolving to debris flows are probably the most common type of slope movement. At the same time, deep-seated, intermittent landslides can also affect large volumes of weathered rocks and soils. Despite the high frequency of landslides in weathered materials, and the damage and casualties they repeatedly cause, little is known about the relationship between weathering and slope movements. This book presents worldwide case studies, where a variety of geological and geomorphological settings are discussed. The content is divided into three sections: the first is devoted to broad aspects of the weathering/landslide processes; the second and third sections include papers dealing with igneous/metamorphic and sedimentary weathered rocks, respectively.

Factors of Soil Formation Newnes

Differences In Natural Fertility Of Soils Are Governed By Factors And Conditions Of Soil Formation, As Well As The Composition, Properties And The Structure Of Soil. Also, The Natural Fertility Is Different In Different Soil Zones. The Most Important Problem Facing The Soil Science Today, Is The Raising Of Soil Fertility. Encapsulated In This Book Is The Basic Scientific Information On Soil Formation, Composition (Chemical Composition, Organic Matter, Colloids, Gases) And Properties (Physico-Chemical And Biological) Of Soil And Also The Classification Of Soils. This Is Followed By A Brief Description Of The Soils Of Some Soil Zones And Regions. And Finally, How Under The Influence Of The Appropriate Complex Of Meliorative Measures, Any Soil Can Be Converted Into A Highly Tame, Fertile One? - Is Discussed. Various Steps Involved In Agricultural Melioration, Forest Improvement, Hydromelioration, Reclamation Of Salined Soils And Fight Against Soil Erosion Are Explained In A Simple And Easy To Understand Manner. The Text Of The Book Is Appropriately Illustrated Through Diagrams, Graphs And Tables Of Scientific Data. A Wide Cross-Section Of Students, Scholars And Researchers From The Field Of Soil Sciences Will Find The Book As A Useful Reference Source.

Contents Part 1: Soil Formation, Composition And Properties Of Soil, Chapter 1: Weathering; Major (Geological And Minor (Biological) Cycles Of Changes, Chapter 2: Factors And Conditions Of Soil Formation; Soil-Forming Rocks, Climate And Soil Formation, The Importance Of Relief In Soil Formation, The Role Of Biosphere In Soil Formation, The Role Of Time And Space In Soil Formation, Soil Formation, Chapter 3: Composition Of Soil; Mineralogical Composition, Chemical Composition, Mechanical And Microaggregatory Composition, Organic Matter, Chapter 4: Soil Colloids And Absorbing Power Of Soil; Soil Colloids, Absorbing Power Of Soils, Chapter 5: Soil Morphology; Soil Structure Formation And Its Significance, Texture Inclusions And Neogeneses, Structure Of Soil Profile, Chapter 6: Chemical And Physical Properties Of Soil; Chemical Properties, Physical Properties, Chapter 7: Water Properties Of Soil; Forms Of Water In Soil, Soil Moisture, Water Capacity Of Soils, Chapter 8: Movement Of Water In Soil; Movement Of Gaseous Moisture, Movement Of Molecular Water, Capillary Movement Of Water, Gravitational Movement Of Water, Soil-Ground

Water, Chapter 9: Water Regime And Water Balance Of Soils; Elements Of Water Balance Of Soils, Types Of Water Regimes Of Soils, Types And Subtypes Of Water Regime, Chapter 10: Thermal And Air Regimes Of Soil; Thermal Properties And Thermal Regime, Soil Air And Air Regime, Chapter 11: Classification Of Soils And Type Of Soil Formation; Classification Of Soils, Types Of Soil Formation, Part 2: Elements Of Soil Geography, Soils Of The Earth And Their Utilisation, Chapter 12: Soils Of The Tundra And Forest Zones; Soils Of The Tundra And Forest-Zone, Soils Of The Forest-Meadow Zone, Chapter 13: Soils Of Forest-Steppes And Chernozemic Steppes; Soils Of Forest-Steppes, Soils Of The Chernozem-Steppe Zone, Classification Of Chernozems, Chapter 14: Soils Of Dry Steppes, Semideserts And Deserts; Soils Of Dry And Desertic Steppes, Soils Of Desertic Steppes And Deserts Sands, Chapter 15: Soils Of Humid Subtropics, Tropics And Mountain Regions; Soils Of Humid Subtropics And Tropics, Soils Of Mountain Regions, Chapter 16: Flood Plain Soils; Flood Plains And Their Elements, Flood Plain Soil Formation, Soils Of Plain Segments, Classification And Description Of Flood Plain Soils, Agricultural Value And Melioration Of Flood Plains, Chapter 17: Bog Soils; Reasons For The Formation Of Bogs And Origin Of Bog Soils, Giesation, Peat Formation Composition And Properties Of Peat, Classification And Description Of Bog Soils, Agricultural Significance And Utilisation Of Bog Soils, Deswamping Of Soils, Chapter 18: Salined Soils; Origin Of Salts And Salined Soils, Solonchaks And Saline Soils, Solonetztes And Solonetzic Soils, Solods, Distribution Of Saline Soils, Secondary Salinisation Of Soils, Part 3: Improvement Of Soils, Chapter 19: Improvement And Taming Of Soils; Agricultural Amelioration Forest Improvement And Sand Fixation, The Role Of Hydromelioration In The Taming Of Soils, Taming Of Soils Through Sewage Application, Drainage And Its Significance, Land Levelling, Chapter 20: Reclamation Of Salined Soils; Reclamation Of Solonchokous Soils, Leaching Of Salined Soils, Melioration Of Solonetzic Soils, Melioration Of Takyr, Chapter 21: Soil Erosion And How To Fight It.

Explores soil as a nexus for water, chemicals, and biologically coupled nutrient cycling Soil is a narrow but critically important zone on Earth's surface. It is the interface for water and carbon recycling from above and part of the cycling of sediment and rock from below. Hydrogeology, Chemical Weathering, and Soil Formation places chemical weathering and soil formation in its geological, climatological, biological and hydrological perspective. Volume highlights include: The evolution of soils over 3.25 billion years Basic processes contributing to soil formation How chemical weathering and soil formation relate to water and energy fluxes The role of pedogenesis in geomorphology Relationships between climate soils and biota Soils, aeolian deposits, and crusts as geologic dating tools Impacts of land-use change on soils The American Geophysical Union promotes discovery in Earth and space science for the benefit of humanity. U.S. Geological Survey Professional Paper John Wiley & Sons

Several important developments in our understanding of the chemistry of weathering have occurred in the last few years: 1. There has been a major breakthrough in our understanding of the mechanisms controlling the kinetics of silicate dissolution, and there have been major advances in computer modeling of weathering processes. 2. There has been a growing recognition of the importance of organic solutes in the weathering process, and hence of the inter-relationships between mineral weathering and the terrestrial ecosystem. 3. The impact of acid deposition ("acid rain") has been widely recognized. The processes by which acid deposition is neutralized are closely related to the processes of normal chemical weathering; an understanding of the chemistry of weathering is thus essential for predicting the effects of acid deposition. 4. More high-quality data have become available on the chemical dynamics of small watersheds and large river systems, which represent the integrated effects of chemical weathering.

Proceedings of the Workshop, Maratea, 38-30 June 2001 Courier Corporation

For the past 200 years, geological scientists have used the present as a key to unlocking the past. This volume continues the tradition by exploring the processes of weathering and soil formation as indicators of the present environment of the Earth's land surface. Examined are the various ways in which this information can be used to interpret past environments which have produced the soils now preserved as paleosols. Because the surface environment of the earth may now be undergoing rapid change (the greenhouse effect), the book is a timely one for those researchers looking for evidence of analogous changes in the Earth's past. The work is divided into three major sections. The first deals with fundamental considerations of weathering, clay mineralogy and diagenesis. The second deals with the formation of soils from various starting materials and in various surficial environments. And the final section is an interpretation of paleosols. This volume provides valuable reading material for graduate and senior-undergraduate courses.
