 describes a sample of the varied applications of crowdsourcing to improve transportation systems
 management and operations. Focus applications include the following: • Traveler information. •
 Incident management. • Arterial traffic management .Sample Crowdsourcing for Operations
 ApplicationsCrowdsourcing software development or software crowdsourcing is an emerging area
 of software engineering.It is an open call for participation in any task of software development,
 including documentation, design, coding and testing.These tasks are normally conducted by either
 members of a software enterprise or people contracted by the enterprise.Crowdsourcing software
 development - WikipediaCrowdsourcing mobile applications entails a move away from salaried
 forms of exchange within an internal labor market to an external market of competing developers,
 thus allowing Apple to avoid the incurred costs of the employment contract while profiting from the
 productivity of what is effectively a volunteer workforce.The Apple business model: Crowdsourcing

mobile applicationsCrowdsourcing is a sourcing model in which individuals or organizations obtain
 goods and services, including ideas and finances, from a large, relatively open and often rapidly-
 evolving group of internet users; it divides work between participants to achieve a cumulative
 result. The word crowdsourcing itself is a portmanteau of crowd and outsourcing, and was coined
 in 2006.Crowdsourcing - WikipediaCrowdsourcing Application Development. Back in January I
 talked with Eric Knipp, who manages Gartner's Application Platform Strategies research team,
 about some of the opportunities and challenges he saw on the horizon for application developers.
 During that conversation, he mentioned an intriguing idea that he was exploring: That
