Competition law underpins the market economy by prohibiting anti-competitive agreements and practices, and the abuse of dominant positions in the market. Until the financial crisis it was widely assumed that the financial services industry was highly competitive. This book explores the extent to which this is the case. By analysing crisis and pre-crisis competition law cases and examples from the UK, the EU and around the world, David Harrison asks whether there exists good reason for financial services to be treated differently from the rest of the market economy. The theory of market efficiency is not borne out in practice. He particularly draws upon John Maynard Keynes in examining the differences between price mechanisms in product markets for "normal" goods, and price mechanisms in financial and investment markets where expectations of the future tend to play a greater role, leading to greater price fluctuations. In this evaluation, the book examines aspects of the practical functioning of capital markets such as the phenomenon of herding behaviour by financial participants, how short-term behaviour by intermediaries can be to the disadvantage of savers and productive investment, the relationship between investment markets and product markets and the extent to which the same competition rules apply to undertakings involved in both. The book will be invaluable to students, researchers and practitioners of banking and finance law, and commercial and competition law.

Reflecting this development, *Numerical Methods in Finance and Economics: A MATLAB?-Based Introduction, Second Edition* bridges the gap between financial theory and computational practice while showing readers how to utilize MATLAB?-the powerful numerical computing environment-for financial applications. The new M&A bible. Few actions can change the value of a company—and its competitive future—as quickly and dramatically as an acquisition. Yet most companies fail to create shareholder value from these deals, and in many cases they destroy it. It doesn't have to be this way. In *The Synergy Solution*, Deloitte's Mark Sirower and Jeff Weirens show acquirers how to develop and execute an M&A strategy—end to end—that not only avoids the pitfalls that so many companies fall into but also creates real, long-term shareholder value. This strategy includes how to: Become a prepared "always on" acquirer Test the investment thesis and DCF valuation of a deal Plan for a successful Announcement Day, and properly communicate synergy promises to investors and other stakeholders Realize those promised synergies through integration planning and post-close execution Manage change and build a new, combined organization Sirower and Weirens provide invaluable background to those considering M&A, laying out the issues they have to consider, how to analyze them, and how to plan and execute the deal effectively. They also show those who have already started the process of M&A how to maximize their chances of success. There's an art and a science to getting mergers and acquisitions right, and this powerful book provides the insights and strategies acquirers need to find success at every stage of an often complex and perilous process.

Globalization is transforming the world at an accelerated pace. Integration of the world continues, widening and intensifying international linkages in economic, political and social relations. Liberalization of trade and finance, lubricated by revolutionary changes in information technology, has resulted in significant economic growth at the global level. On the other hand, the process of globalization is changing the nature of production relations, threatening the traditional roles of the nation-state, and carrying with it far-reaching implications for sustainable growth, development and the environment. Although both developed and developing countries are actively participating in this saga of globalization, nearly ninety countries, as the United Nations' Human Development Report, 1996 indicates, are worse off economically than they were ten years ago, leading to "global polarization" between haves and have nots. The report further indicates that the gap between the per capita incomes of the industrialized world and the developing countries, far from

narrowing, has more than tripled during the last thirty years. Further, a majority of the countries benefitting from this globalization drive have seen a rise in inequality and poverty. This failure of market driven globalization to reward the benefits equitably led the United Nations to proclaim 1996 as the International Year for the Eradication of Poverty (IYEP) and the decade of 1997-2006 as the international decade for the eradication of poverty, and to promote "people-centered sustainable development".
