Employees are an organization's most valuable asset. However, getting employees to perform at optimal levels is determined by the quality of the administrators. "Tips for Administrators" is a practical guide for those who are new to administrative and managerial roles, or who feel they can become better at running their departments. Written

in an easy-to-read style, "Tips for Administrators" incorporates psychological principles of organizational behavior and relationship building to help administrators optimize the performance of their departments and institutions.

Publisher's description: This book describes eight different models of decision-making, compares the models, and illustrates how to use each model with actual cases from schools. The frameworks include classical, administrative, incremental, mixes scanning, political, and

garbage-can models, as well as two models of shared decision-making. After illustrating the use of these decision-making models to analyze and develop solution strategies, students have the opportunity to explore about fifty actual cases to build their own analyses and solution strategies.

This book is a call to education officials and professionals to address the need to provide ongoing mentoring for all teachers, especially veteran teachers, who are often overlooked.

Management and Leadership for Nurse Administrators

Routledge

Leadership is an

activity that not only manifests itself in formal positions, but also bubbles up in various places within an organization. Perhaps given the importance of leadership to any endeavor, the literature on this topic has burgeoned. Yet among these titles, *Learning to Lead* stands out as one of the best texts available on leadership for college and university administrators. Critical skills such as managing people, resolving conflict, and making rational (and legal) decisions are explored within the context of the campus. The book also addresses the needs of those who facilitate leadership workshops, serve as mentors to potential leaders, and

teach courses on higher education leadership and administration. While presenting all sides of key issues, the author calls for the reader to define his or her own position through a series of provocative reflection questions in each chapter. Thus the book invites interaction and teaches administrators not what to think about leadership, but how to think about it.

A few of the cases are: a tenured teacher needs to improve performance; handling interracial physical violence; a teacher is assaulted by a student;

an overcrowded detention hall; parental opposition to bilingual education; and charges of racial discrimination.

In the Prospective Principals' Program at Stanford University, students are engaged in problem-based learning (PBL), a cooperative, small-group approach providing opportunities to resolve problems likely to confront real-world professionals. To illustrate PBL's background and rationale, chapter 1 briefly describes how the topic of teacher selection might be introduced using traditional, case-method, and PBL approaches. Chapter 2 focuses on the students' role and how

instructors can minimize the frustration and difficulties students experience in Stanford's PBL curriculum. Chapter 3 describes a field test of the teacher selection project, focusing on valuable lessons for student and instructor. Chapter 4 explains the instructor's role in PBL and how to deal with potential challenges arising while implementing a PBL project. The fifth chapter contains six student essays to illustrate what students report learning about leadership and various administrative skills. Chapter 6 describes possible obstacles hindering PBL implementation and outlines a strategy for overcoming these impediments. The last

chapter focuses on future challenges, including explicating student-centered learning, facilitating administrators' lifelong learning, conducting research on PBL effectiveness, and exploring other PBL contexts for educating administrators. Appendices provide a description of Stanford's PBL program, samples of problem-stimulated learning projects, and a project checklist. (50 references) (MLH)

Problems of Administration in Social Work IAP

This collection of chapters presents research focused on emerging strategies, paradigms, and theories on the sources, experiences, and consequences of stress, coping, and

prevention pertaining to students, teachers and administrators. Studies analyze data collected through action research, program evaluation, surveys, qualitative interviewing, auto ethnography, and mixed methods gathered from students and educators in the United States, Italy, Holland, Turkey, and Australia.

John Wiley & Sons
Research has shown that adult learners prefer a problem solving approach to learning rather than subject centered. This text provides a non-traditional approach to teaching and learning

the basics of human resource management through a series of 120 'in-basket' exercises and guided questions. The in-basket exercises focus on real-life problems and issues that confront school administrators on a daily basis. As a result, it scores very high in student interest and satisfaction. A brief history of assessment centers and a synopsis of recognized adult learning theories are also included. Covering 12 HR categories, the exercises are devoted to: recruitment; legal/policy; selection/credentials; collective bargaining; data analysis/budgeting; investigations; employee relations/public relations/counseling; evaluation; contract

administration;
discipline;
planning/problem
solving; and

School Administrator's
Factomatic Timeshare

This book immerses prospective administrators in the realities of practice. Problem solving and decision-making skills are addressed through the use of open-ended case studies. Effective practice in school administration requires both leadership and management. In today's reform-minded, information-based society, practitioners must be able to frame problems correctly and then make effective decisions to ameliorate them. As leaders, district and school-level administrators are expected to focus on what should be done to improve schools; as managers; they are expected to focus on how to do things successfully.

The cases in this book are designed to make students think about common problems of practice by encouraging them to bridge theory and practice. More precisely, the cases are intended to hone four essential practitioner skills: 1. The ability to frame a problem correctly 2. The ability to develop and evaluate alternative solutions to a defined problem 3. The ability to use data and other facts to counter the influence of politics and emotion in decision making 4. The ability to grow professionally by engaging in reflective practice

**The Effective

This concise text is a reader friendly primer

to the fundamentals of administrative responsibility and ethics. Your students will come away with a clear understanding of why ethics are important to administrators in governmental and non-profit organizations, and how these administrators can relate their own personal values to the norms of the public sector. Since the publication of the first edition of *The Ethics Primer*, there has been significant change in the climate of public affairs that impacts the discussion of ethics for those who serve the public in governmental and nonprofit organizations. The new edition reflects those changes in three major areas: • Ethics in an era of increasing

tension between political leaders and administrators over the role and size of government. • Ethical choices in making fiscal cuts or imposing new taxes in the face of the greatest economic crisis since the Depression. • Ethical challenges to established practices in public organizations. The Second Edition also offers thoroughly updated data and sources throughout, as well as examples that incorporate new research and new developments in government and politics. The Second Edition of *The Ethics Primer for Public Administrators in Government and Nonprofit Organizations*: • Introduces readers to the fundamentals of

administrative responsibility and provides comprehensive coverage of the important elements of ethics. • Features an accessible and interactive approach to maximize understanding of the subject. • Includes information on the nature of public service and the ethical expectations of public administrators, as well factors that may lead to unethical behavior. • Written from a political perspective, the book addresses questions that are highly salient to persons working in government and nonprofits. • Offers helpful ways to link ethics and management in order to strengthen the ethical climate in a public organization.

You've got Linux installed and running, but what do you do when the printer spits out a bunch of gibberish? Or you set up a network but only guests can login and users can't? Or it just won't connect to the Web--no matter what you try? Solving the innumerable problems that arise on a Linux machine or network can be a full-time job. Fortunately, Brian Ward has written "The Linux Problem Solver" to ease the pain. "The Linux Problem Solver" helps solve difficult Linux snafus by integrating troubleshooting techniques with clear explanations and tutorials of Linux tools. With the first half of the book focusing on configuration tools, and

the second half focusing on maintenance, this book guides you through the maze of advanced problems that confront any Linux user or system administrator. An indispensable quick reference, "The Linux Problem Solver" covers solutions to over 100 problems, including how to: Troubleshoot problems with printing, filesharing, and connecting to a network. Configure and install software from source code. Compile and install a new Linux kernel. Debug a network connection and secure a system. Recover from a system crash and prevent serious damage in the future. Each chapter covers a specific Linux issue with a clear treatment of common pitfalls including the

symptom, the problem, and the fix, and you'll soon understand problems as they arise. The CD-ROM directly supports the book's contents, with configuration files and many programs not included with most Linux distributions. The CD also doubles as an emergency boot disk with diagnostic recovery tools. Together with the book, this package is a must for anyone serious about starting or maintaining a Linux network. Contrary to the license agreement in the book, all programs on the CD (except for nvi) are GPL and covered by the GNU Public License. Case studies are a
 wonderful way to
 engage future
 educators in real-life
 problem solving. Unlike
 most textbooks, which
 give the students
 information and
 provide answers for
 future examinations,
 case studies are open-
 ended and require

active thinking and learning forcing future educators to think and act like an actual school administrator. All New Real-Life Case Studies for School Administrators details topics that are paramount in today's schools and provides educators advice in dealing with the issues. The case studies in this book include: -Pressure caused by the testing requirements of No Child Left Behind - Difficulties in meeting federal requirements for handicapped children under the pressure of providing the "least restrictive environment" -The challenge of providing and maintaining effective security plans for school buildings - Making sense out of contradictory educational research

studies -Establishing priorities when considering the importance of electives and extra curricular activities -Poor teacher morale as a result of testing pressures

This text provides educational administrators with a working knowledge of the problem-solving techniques of PERT (planning, evaluation, and review technique), Linear Programming, Queueing Theory, and Simulation. The text includes an introduction to

decision-making and operations research, four chapters consisting of indepth explanations of each technique, and instructions on the use of computer programs. PERT is used for planning and analyzing stages or activities in project development. The chapter includes step-by-step instruction in its use--with illustrated charts and examples--and an explanation of the GCPATH program for a PERT computer analysis. The third chapter centers on the use of Linear Programming, a mathematical technique designed to solve mathematically stated problems. It contains examples of the computer program LPRG and illustrates its use in several different

situations. Queueing Theory, the subject of the fourth chapter, is a method for analyzing waiting line problems. Presented are the basic elements of the theory, discussion of its use, and an outline of solutions to waiting problems with the QUEUE computer program. The final chapter introduces Simulation Technique, where a variety of simulated solutions to problems are used instead of real life situations. Practical examples illustrate the application of the technique and the use

of the computer programs ENROLL, SUBST, and BUSRTE. (MD)
