*Soil mechanics - Wikipedia*

The International Society for Soil Mechanics and Geotechnical Engineering (ISSMGE) is an international professional association, presently based in London, representing engineers, academics and contractors involved in geotechnical engineering. It is a federation of 89 member societies representing 90 countries around the world, which together give it a total of some 19,000 individual members.

*Geotechnical engineering - Wikipedia*

The International Society had its origins in the First International Conference on Soil Mechanics and Foundation Engineering held in Harvard in 1936. A total of 206 delegates attended from 20 countries. In order to ensure continuation of this very successful initiative, an Executive Committee was set up with Karl Terzaghi as President and Arthur Casagrande as Secretary; but war intervened and ...

Soil mechanics is used to analyze the deformations of and flow of fluids within natural and man-made structures that are supported on or made of soil, or structures that are buried in soils. Example applications are building and bridge foundations, retaining walls, dams, and buried pipeline systems.

The Australian Geomechanics Society was founded in 1970. Its origins lie in the National Committee of Soil Mechanics of the Institution of Engineers, Australia established in 1953 and the call for a corresponding society in rock mechanics.

### **Soil Mechanics Geotechnical Engineering**

Geotechnical engineering embraces the fields of soil mechanics and rock mechanics, and has applications in the fields of geology, geophysics, hydrology, and other related sciences. Geotechnics is practiced by both engineering geologists and geotechnical engineers.

*Online Library | ISSMGE*

Geotechnical engineering is the science that explains mechanics of soil and rock and its applications to the development of human kind. It includes, without being limited to, the analysis, design and construction of foundations, slopes, retaining structures, embankments, roadways, tunnels, levees, wharves, landfills and other systems that are made of or are supported by soil or rock.
