Bringing together a diverse array of property law specialists, this timely

Research Agenda explores the theoretical and doctrinal dimensions of the main subareas of property law. It examines the current tensions between the protection of existing property interests and the need to tackle societal challenges, such as digitalisation, the creation of energy communities, and the climate crisis.

Legal Foundations of Land Use Planning John Wiley & Sons

This text is divided into a series of discussion topics, offering descriptions of the American response to specific urban

problems and contrasting the American experience with approaches from other nations. Kushner offers readers, including those with no experience in the field, a wide range of discussion topics to suit their interests. The selected subjects range from traditional planning techniques such as zoning and "smart growth" management systems, to affordable housing, transportation, economic development, and urban revitalization. Other topics such as land use controls and land development laws in different

countries are also included. This book can be read by those simply interested in the field, or by readers searching for a lively discussion of contemporary problems. Zoned in the USA Bloomsbury Publishing Urban planning is a community process, the purpose of which is to develop and implement a plan for achieving community goals and objectives. In this process, planners employ a variety of disciplines, including law. However, the law is only an instrument of urban planning, and cannot solve all urban problems or meet all social needs. The ability of the legal system to implement the planning process is limited by philosophical, historical, and constitutional constraints. Jurisprudence is concerned with societal values and relationships that limit the effectiveness of the law as an instrument of urban planning. When law is definite and certain, freedom is enhanced within the boundaries created by the law. This doctrine of Anglo-American law imposes an obligation on courts to be guided by prior judicial decision or precedents and, when deciding similar matters, to follow the previously established rule unless the case is distinguishable due to facts or changed social, political, or economic conditions. The author focuses on seven specific areas of law in relation to land use planning: law as an instrument of planning, zoning, exclusionary zoning and managed growth, subdivision regulations, site plan review and planned unit development, eminent domain, and the transfer of development rights. Jerome G. Rose cites more than one hundred court cases, and the indexed list serves as a useful encyclopedia of land use law. This is a valuable sourcebook for all legal experts, urban planners, and government officials. Takings International Van Nostrand Reinhold Company

COMPARATIVE URBANISM 'Comparative Urbanism fully transforms the scope and purpose of urban studies today, distilling innovative conceptual and methodological tools. The theoretical and empirical scope is astounding, enlightening, emboldening. Robinson peels away conceptual labels that have anointed some cities as paradigmatic and left others as mere copies. She recalibrates overly used theoretical perspectives, resurrects forgotten ones long in need of a dusting off, and brings to the fore those often marginalised. Robinson's approach radically re-distributes who speaks for the urban, and which urban conditions shape our theoretical understandings. With *Comparative Urbanism* in our hands, we can start the practice of urban studies anywhere and be relevant to any number of elsewhere.' Jane M. Jacobs, Professor of Urban Studies, Yale-NUS College, Singapore 'How to think the multiplicity of urban realities at the same time, across different times and rhythmic arrangements; how to move with the emergences and stand-stills, with conceptualisations that do justice to all things gathered under the name of the urban. How to imagine comparatively amongst differences that remain different, individualised outcomes, but yet exist in-common. No book has so carefully conducted a specifically urban philosophy on these matters, capable of beginning and ending anywhere.' AbdouMalik Simone, Senior Research Fellow, Urban Institute, University of Sheffield

The rapid pace and changing nature of twenty-first century urbanisation as well as the diversity of global urban experiences calls for new theories and new methodologies in urban studies. In *Comparative Urbanism: Tactics for Global Urban Studies*, Jennifer Robinson proposes grounds for reformatting comparative urban practice and offers a wide range of tactics for researching global urban experiences. The focus is on inventing new concepts as well as revising existing approaches. Inspired by postcolonial and decolonial critiques of urban studies she advocates for an experimental comparative urbanism, open to learning from different urban experiences and to expanding conversations amongst urban scholars across the globe. The book features a wealth of examples of comparative urban research, concerned with many dimensions of urban life. A range of theoretical and philosophical approaches ground an understanding of the radical revisability and emergent nature of concepts of the urban. Advanced

students, urbanists and scholars will be prompted to compose comparisons which trace the interconnected and relational character of the urban, and to think with the variety of urban experiences and urbanisation processes across the globe, to produce the new insights the twenty-first century urban world demands. Reporting on the innovative, transdisciplinary research on sustainable urbanisation being undertaken by Mistra Urban Futures, a highly influential research centre based in Sweden, this book builds on the Policy Press title *Rethinking Sustainable Cities* to make a significant contribution to evolving theory about comparative urban research. Highlighting important methodological experiences from across a variety of diverse contexts in Africa and Europe, this book surveys key experiences and summarises lessons learned from the MUF's global research platforms. It demonstrates best practice for developing and deploying different forms of transdisciplinary co-production, covering topics including neighbourhood transformation and housing justice, sustainable urban and transport development, urban food security and cultural heritage.

Comparative Approaches to Informal Housing Around the Globe brings together historians, anthropologists, political scientists, sociologists, urban planners and political activists to break new ground in the globalisation of knowledge about informal housing. Providing both methodological reflections and practical examples, they compare informal settlements, unauthorised occupation of flats, illegal housing construction and political squatting in different regions of the world. Subjects covered include squatter settlements in Kyrgyzstan and Kazakhstan, squatting activism in Brazil and Spain, right-wing squatting in Germany, planning laws and informality across countries in the Global North, and squatting in post-Second World War UK and Australia.

This book provides a critical assessment of the New South Wales Land and

Environmental Court (NSWLEC). Effective adjudication has become a key consideration for environmental lawyers. One of the most important questions is whether environmental law frameworks need their own courts, with the conclusion being: yes they do. Here, a pioneer of such a court, the NSWLEC is forensically examined to see what it might teach other such courts. Showing a court 'in action' it suggests models that practitioners and policy makers might follow. It also speaks to the environmental law scholars, setting out a conceptual framework for studying such courts as legal institutions. This multi-faceted collection is invaluable to scholars and practitioners alike.

"After decades of evolving practice often tested in court, development impact fees have become institutionalized in the American planning and local government finance systems. But they remain contentious especially as they continue to evolve. This book is the third in a series of impact fee guidebooks for practitioners, following *A Practitioner's Guide to Development Impact Fees and Impact Fees: Proportionate Share Development Fees. Proportionate Share Impact Fees and Development Mitigation* is the culmination of the authors' careers devoted to pioneering applications of the dual rational nexus test. That test requires (1) establishing the rational nexus between the need for infrastructure, broadly defined, to mitigate the impacts of development and (2) ensuring that development mitigating its infrastructure impacts benefits proportionately. The book elevates professional practice in two ways. First, it shows how the rational nexus test can be applied to all forms of development infrastructure impact mitigation. Second, it establishes the link between professional ethics and equity as applied to proportionate share impact fees and development mitigation. The book is divided into four parts with the first reviewing policy and legal foundations, the second detailing the planning, calculation, and implementation requirements, the third exploring economic, ethical, and equity implications, and the fourth presenting state-of-the-art case studies. *Proportionate Share Impact Fees and Development Mitigation* sets new standards for professional practice"--

This book highlights current concepts of Social Urbanism, the contemporary set of multiple and interdisciplinary urban studies that have emerged mainly from the complex realities of Latin American cities. The discussion that follows places special emphasis on public land policy and the innovative urban instruments developed in that region to promote social and territorial inclusion. Critical reflections throughout the pages of this book shed light into the local context of each case-study in order to understand their specific set of challenges and opportunities.

Relevant lessons are extracted from the three cities here analyzed, the medium-scale city of Medellin, the large-scale city of Bogota, and the megacity of Sao Paulo, as well as from local innovative experiences in Argentina and Uruguay. These cities underwent promising transformation processes over two decades, applying planning and financing instruments of land policy which have produced significant shifts in the urban development paradigm in the region. The quest for social inclusion has emerged as the common denominator in these cities, awakening growing interest across several fields of urban studies, from public policies and city management to urban law, city financing, urban development, and innovative community participation processes. The book brings implications on urban land policy for transition cities in the Global South. The question of social inclusion in Global South cities is however far from being solved; the analysis presented in this book shows advances and hope, besides a long path still ahead, which can only be faced through a continuous and challenging incremental process. May this book be an incremental step.

Proportionate Share Impact Fees and Development Mitigation

Taylor & Francis
Throughout the world, city planners and governments grapple with the challenges of urban planning using remarkably similar land use regimes. Yet the realisation is increasing that real urban problems – crime, decay, drug abuse, inequality, depression and alienation – are not easily

solved by the classic devices of a strategic plan and a zoning map. Planning regimes are therefore in constant flux, as planners and governments adjust and experiment to address these problems, often with little awareness as to what they are trying to accomplish. In *Comparative Urban Land Use Planning: Best Practice*, Leslie A. Stein digs deeper, drawing on examples from around the world to discover the best practice responses to the critical issues of planning and urban social problems. Although every city has its own cultural and political milieu, patterns of change and levels of success can be discerned and universal lessons learned. By comparing different urban planning approaches and considering their underlying ideologies and assumptions, he proposes a more insightful approach to the role of land use planning. This book is both scholarly and emotional, expressing a great love of cities and calling for a more clear-eyed approach for their care.

This is an introduction to the secrets of Urban Design Management (UDM). The book examines the roles of the players involved in land-use projects and describes good collaborative methods of practice in project-based urban design and planning, putting emphasis on the creative co-operative skills and the wide knowledge of the participants in a working group. The role of the architect is examined in relation to design, planning and project management with particular emphasis on collaboration and negotiation skills. Specific issues considered include: The make-up of a good project team Ways to make the project team function together Objectives and benefits of project-orientated planning The need to take local characteristics into account in project-orientated planning The preparation required for a co-operative planning process and how initial information can be collected and used How to define project content, and outlining the project itself Partner-specific strategies *Urban Design Management* contains international examples and many diagrams and photographs, making it a useful and accessible guide for all built environment professionals working in the public realm and those studying architecture, urban design and planning at a graduate level.

While the role of comparative law in the courts was previously only an exception, foreign sources are now increasingly becoming a source of law in regular use in supreme and constitutional courts. There is considerable variation between the practices of courts and the role of comparative law, and methods remain controversial. In the US, the issue has been one of intense public debate and it is still one of the major dividing issues in the discussion about the role of the courts. Contributing to the existing discussion of the use of comparative law in the courts, this book provides an inclusive, coherent, and practical analysis of the relevant law and jurisprudence in comparative law in the courts. It examines the consequences for court procedures and the form of judgments, as well as how foreign sources are drawn upon in private international law, European law, administrative law, and constitutional law as well as before general courts. The book also includes case studies of comparative law used in particular spheres of the law, such as tort law and consumer law. Written by practising judges and lawyers as well as leading academics, this book serves as a central reference point concerning the role of comparative law before the courts.

In her study of the interactions between tools of urban sustainability governance in key cities, Lisa Pettibone argues that a new factor-sustainability-minded groups-may be critical to building momentum for sustainability. The book presents in-depth case studies of six cities in the USA and Germany: New York, Portland, Seattle, Berlin, Hamburg, and Heidelberg. Drawing on 75 interviews, document analysis, and a bilingual literature review, the book analyzes how sustainability is politically

constructed in city strategic plans and sustainability indicators. The volume provides a comprehensive introduction to the principles of sustainability, discusses the key governance instruments relevant to urban sustainability, and delivers new empirical and theoretical material on their role in a sustainability transition. It concludes that despite the national-level differences, cities' experiences in both countries are similar. Political sustainability at the city level differs in several important ways from academic principles of sustainability. Finally, it proposes that sustainability-minded groups may be a key link to connect urban sustainability in practice to theoretical concepts.

The adoption of the Sustainable Development Goals (SDGs) by the UN General Assembly in 2015 represents the latest attempt by the international community to live up to the challenges of a planet that is out of control. Sustainable Development Goal 11 envisages inclusive, safe, resilient and sustainable cities around the world by the year 2030. This globally agreed vision is part of a trend in international policy toward good urban governance, and now awaits implementation. Fourteen original contributions collectively examine how this global vision has been developed on a conceptual level, how it plays out in various areas of (global) urban governance and how it is implemented in varying local contexts. The overarching hypothesis presented herein is that SDG 11 proves that local governance is recognised as an autonomous yet interrelated part of the global pursuit of sustainable development. The volume analyses three core questions: How have the normative ideals set forth in SDG 11 been developed? What are the meanings of the four sub-goals of SDG 11 and how do these relate to each other? What does SDG 11 imply for urban law and governance in the domestic context and how are local processes of urban governance internationalised? The *Globalisation of Urban Governance* makes an important scholarly contribution by linking the narrative on globalisation of

good urban governance in various social sciences with legal discourse. It considers global governance and connects the existing debate about cities and their place in global governance with some of the most pertinent questions that lawyers face today.

The perception of smart cities encompasses a strategy that uses different types of technologies, artificial intelligence (AI), and machine learning and in which, through the internet of things (IoT) and sensor-based data collection, the strategy extrapolates information using insights gained from that data to manage or monitor or track assets, resources, and services efficiently in an urban area. Both these models deeply affect the localities where they are applied and can create together immense possibilities for urban recovery, better quality of life, physical and mental health protection, and economic and social redevelopment. *Smart Cities and Machine Learning in Urban Health* promotes interdisciplinary work that develops and illustrates the concept of resilience in relation to smart city and machine learning. The book examines the ability of an area and its communities to recover quickly from difficulties; the rigidity and resistance of an area and its communities to possible crisis; the ability of an area, its communities, infrastructure, and business to spring back into shape; and the responsiveness and mitigation towards the crisis with a special look at the impact of the COVID-19 pandemic. The research's theoretical foundation rests on a wide range of non-architectural sources, primarily AI, sociology, urban studies, and technological development, but it explores everything on cases taken from real cities, thus transforming them into pieces of architectural interest. Covering topics such as carbon emissions, digital healthcare systems, and urban transformation, this book is an essential resource for graduate and post-graduate students, policymakers, researchers, university faculty, engineers, public management, hospital administration, professors, and academicians.
