Classical electromagnetism or classical electrodynamics is a branch of theoretical physics that studies the interactions between electric charges and currents using an extension of the classical Newtonian model. The theory provides a description of electromagnetic phenomena whenever the relevant length scales and field strengths are large enough that quantum mechanical effects are negligible. Paramagnetismo - Wikipedia En physique, le vecteur de Poynting est la densité de flux lié à la propagation de l'onde électromagnétique. Sa direction est la direction de propagation. On le note \vec{S} , \vec{P} , \vec{P} ou \vec{S} . Le flux du vecteur de Poynting à travers une surface (fermée ou non) est égal à la puissance véhiculée par l'onde à travers cette surface. Vecteur de Poynting — Wikipédia In fisica, la corrente di spostamento è una grandezza fisica che rappresenta la variazione temporale del campo elettrico introdotta per descrivere la formazione di un campo magnetico in presenza di un campo elettrico variabile nel tempo.
