ANDREW SHEPPARD

Astronautics & Aeronautics OUP Oxford
In *A Medicated Empire*, Timothy M. Yang explores the history of Japan's pharmaceutical industry in the early twentieth century through a close account of Hoshi Pharmaceuticals, one of East Asia's most influential drug companies from the late 1910s through the early 1950s. Focusing on Hoshi's connections to Japan's emerging nation-state and empire,

and on the ways in which it embraced an ideology of modern medicine as a humanitarian endeavor for greater social good, Yang shows how the industry promoted a hygienic, middle-class culture that was part of Japan's national development and imperial expansion. Yang makes clear that the company's fortunes had less to do with scientific breakthroughs and medical innovations than with Japan's web of social, political, and economic relations. He lays bare Hoshi's business strategies and its connections with politicians and

bureaucrats, and he describes how public health authorities dismissed many of its products as placebos at best and poisons at worst. Hoshi, like other pharmaceutical companies of the time, depended on resources and markets opened up, often violently, through colonization. Combining global histories of business, medicine, and imperialism, *A Medicated Empire* shows how the development of the pharmaceutical industry simultaneously supported and subverted regimes of public health at home and abroad.

Francis

This introduction to politics is designed for first-year students in social sciences and for the general reader interested in the basics of contemporary politics. The text's various sections and lecture summaries deal with the important areas of political science, different systems of democratic government, the fall of communism and post-communist politics, as well as issues in Caribbean politics such as globalization, constitutional reform and regional integration.

The New NHS Cornell University Press
Discusses the main issues, challenges, opportunities, and trends related to this explosive range of new developments and applications, in constant evolution, and impacting every organization and society as a whole. This two volume handbook supports post-graduate students, teachers, and researchers, as well as IT professionals and managers.

Academic literacy - prepare to learn is different from traditional courses in that it is task-based: it requires of language learners who are developing their

academic literacy to do authentic academic tasks and to solve real academic problems.

Library Journal MIT Press

Conservation Biology for All provides cutting-edge but basic conservation science to a global readership. A series of authoritative chapters have been written by the top names in conservation biology with the principal aim of disseminating cutting-edge conservation knowledge as widely as possible. Important topics such as balancing conservation and human needs, climate change, conservation planning, designing and analyzing conservation research, ecosystem services, endangered species management, extinctions, fire, habitat loss, and invasive species are covered. Numerous textboxes describing additional relevant material or case studies are also included. The global biodiversity crisis is now unstoppable; what can be saved in the developing world will require an educated constituency in both the developing and developed world. Habitat loss is particularly acute in developing countries, which is of special concern because it tends to be these locations

where the greatest species diversity and richest centres of endemism are to be found. Sadly, developing world conservation scientists have found it difficult to access an authoritative textbook, which is particularly ironic since it is these countries where the potential benefits of knowledge application are greatest. There is now an urgent need to educate the next generation of scientists in developing countries, so that they are in a better position to protect their natural resources.

To date, the notion of repatriation has been formulated as a highly polarized debate with museums, archaeologists, and anthropologists on one side, and Native Americans on the other. This volume offers both a retrospective and a prospective look at the topic of repatriation. By

juxtaposing the divergent views of native peoples, anthropologists, museum professionals, and members of the legal profession, it illustrates the complexity of the repatriation issue.

Guide to Microforms in Print How2Become Ltd

A landmark comparative history of Europe and China that examines why the Industrial Revolution emerged in the West. The Great Divergence sheds light on one of the great questions of history: Why did sustained industrial growth begin in Northwest Europe? Historian Kenneth Pomeranz shows that as recently as 1750, life expectancy, consumption, and product and factor markets were comparable in Europe and East Asia. Moreover, key regions in China and Japan were no worse off ecologically than those in Western Europe, with each region facing corresponding shortages of land-intensive products. Pomeranz's comparative lens reveals the two critical factors resulting in Europe's nineteenth-century divergence—the fortunate location of coal and access to trade with the New World. As East Asia's economy stagnated, Europe narrowly escaped the same fate largely

due to favorable resource stocks from underground and overseas. This Princeton Classics edition includes a preface from the author and makes a powerful historical work available to new readers.

The Death and Life of Great American Cities Van Schaik Publishers

Includes, beginning Sept. 15, 1954 (and on the 15th of each month, Sept.-May) a special section: School library journal, ISSN 0000-0035, (called Junior libraries, 1954-May 1961). Also issued separately.

This is an open access book. Central Themes: “Administrative Reform Toward Collaborative and Digital Governance Era”. The main objective of the international conference is to identify and understand the opportunities and challenge of the sustainable development goals in the new normal era. Formulating the knowledge and experiences in regard to the sustainable development goals in the new normal era. Understanding the effect in multiple perspectives such as social, politics, political economy, governance, paradigm shift, economy, business, environmental, security, human resources

management etc. Creating innovation in public policy and administration which is adaptive and sensitive to the multiplier effect of decision making and process made by the public sector governance in the pandemic era. Developing networking and partnership with international academicians, expertise and professionals in arrange of filed in business, public policy, administration, political economy, development etc.

501 Writing Prompts McFarland

A classic examination of superb design through the centuries. Widely regarded as a classic in the field, *Experiencing Architecture* explores the history and promise of good design. Generously illustrated with historical examples of designing excellence—ranging from teacups, riding boots, and golf balls to the villas of Palladio and the fish-feeding pavilion of Beijing's Winter Palace—Rasmussen's accessible guide invites us to appreciate architecture not only as a profession, but as an art that shapes everyday experience. In the past, Rasmussen argues, architecture was not just an individual pursuit, but a community undertaking. Dwellings were built with a

natural feeling for place, materials and use, resulting in “a remarkably suitable comeliness.” While we cannot return to a former age, Rasmussen notes, we can still design spaces that are beautiful and useful by seeking to understand architecture as an art form that must be experienced. An understanding of good design comes not only from one's professional experience of architecture as an abstract, individual pursuit, but also from one's shared, everyday experience of architecture in real time—its particular use of light, color, shape, scale, texture, rhythm and sound. Experiencing Architecture reminds us of what good architectural design has accomplished over time, what it can accomplish still, and why it is worth pursuing. Wide-ranging and approachable, it is for anyone who has ever wondered “what instrument the architect plays on.”

Department of State Appropriations Authorization, Fiscal Year 1973 Cambridge University Press

This is an open access book. The start of the 21st century has seen the world shaken by protests, from the Arab Spring to the Yellow Vests, from the Occupy

movement to the social uprisings in Latin America. There are periods in history when large numbers of people have rebelled against the way things are, demanding change, such as in 1848, 1917, and 1968. Today we are living in another time of outrage and discontent, a time that has already produced some of the largest protests in world history. This book analyzes almost three thousand protests that occurred between 2006 and 2020 in 101 countries covering over 93 per cent of the world population. The study focuses on the major demands driving world protests, such as those for real democracy, jobs, public services, social protection, civil rights, global justice, and those against austerity and corruption. It also analyzes who was demonstrating in each protest; what protest methods they used; who the protestors opposed; what was achieved; whether protests were repressed; and trends such as inequality and the rise of women's and radical right protests. The book concludes that the demands of protestors in most of the protests surveyed are in full accordance with human rights and internationally agreed-upon UN development goals. The book

calls for policy-makers to listen and act on these demands.

Academic Literacy Springer Nature
This Element brings together the history of emotions and temporalities, offering a new perspective on both. Time was often imagined as a movement from the past to the future: the past is gone and the future not yet here. Only present-day subjects could establish relations to other times, recovering history as well as imagining and anticipating the future. In a movement paralleling the emphasis on the porous self, constituted by emotions situated not inside but between subjects, this Element argues for a porous present, which is open to the intervention of ghosts coming from the past and from the future. What needs investigating is the flow between times as much as the creation of boundaries between them, which first banishes the ghosts and then denies their existence. Emotions are the most important way through which subjects situate and understand themselves in time.

NASA SP. Princeton University Press
Foreword by Ward Churchill; cover design by Sue Coe The first anthology of writings on the history, ethics, politics and tactics

of the Animal Liberation Front, Terrorists or Freedom Fighters? features both academic and activist perspectives and offers powerful insights into this international organization and its position within the animal rights movement. Calling on sources as venerable as Thomas Aquinas and as current as the Patriot Act--and, in some cases, personal experience--the contributors explore the history of civil disobedience and sabotage, and examine the philosophical and cultural meanings of words like "terrorism," "democracy" and "freedom," in a book that ultimately challenges the values and assumptions that pervade our culture. Contributors include Robin Webb, Rod Coronado, Ingrid Newkirk, Paul Watson, Karen Davis, Bruce Friedrich, pattrice jones and others.

Experiencing Architecture, second edition Routledge

While Americans are generally aware of China's ambitions as a global economic and military superpower, few understand just how deeply and assertively that country has already sought to influence American society. As the authors of this volume write, it is time for a wake-up call. In documenting the extent of Beijing's

expanding influence operations inside the United States, they aim to raise awareness of China's efforts to penetrate and sway a range of American institutions: state and local governments, academic institutions, think tanks, media, and businesses. And they highlight other aspects of the propagandistic "discourse war" waged by the Chinese government and Communist Party leaders that are less expected and more alarming, such as their view of Chinese Americans as members of a worldwide Chinese diaspora that owes undefined allegiance to the so-called Motherland. Featuring ideas and policy proposals from leading China specialists, *China's Influence and American Interests* argues that a successful future relationship requires a rebalancing toward greater transparency, reciprocity, and fairness. Throughout, the authors also strongly state the importance of avoiding casting aspersions on Chinese and on Chinese Americans, who constitute a vital portion of American society. But if the United States is to fare well in this increasingly adversarial relationship with China, Americans must have a far better sense of that country's ambitions and

methods than they do now.

Department of State Appropriations

Authorization, Fiscal Year 1973 IGI Global

Most histories of the Cherokee nation focus on its encounters with Europeans, its conflicts with the U. S. government, and its expulsion from its lands during the Trail of Tears. This work, however, traces the origins of the Cherokee people to the third century B.C.E. and follows their migrations through the Americas to their homeland in the lower Appalachian Mountains. Using a combination of DNA analysis, historical research, and classical philology, it uncovers the Jewish and Eastern Mediterranean ancestry of the Cherokee and reveals that they originally spoke Greek before adopting the Iroquoian language of their Haudenosaunee allies while the two nations dwelt together in the Ohio Valley.

A Medicated Empire

The X-31 Enhanced Fighter

Maneuverability Demonstrator was unique among experimental aircraft. A joint effort of the United States and Germany, the X-31 was the only X-plane to be designed, manufactured, and flight tested as an international collaboration. It was also the

only X-plane to support two separate test programs conducted years apart, one administered largely by NASA and the other by the U.S. Navy, as well as the first X-plane ever to perform at the Paris Air Show. *Flying Beyond the Stall* begins by describing the government agencies and private-sector industries involved in the X-31 program, the genesis of the supermaneuverability concept and its initial design breakthroughs, design and fabrication of two test airframes, preparation for the X-31's first flight, and the first flights of Ship #1 and Ship #2. Subsequent chapters discuss envelope expansion, handling qualities (especially at high angles of attack), and flight with vectored thrust. The book then turns to the program's move to NASA's Dryden Flight Research Center and actual flight test data. Additional tasking, such as helmet-mounted display evaluations, handling quality studies, aerodynamic

parameter estimation, and a "tailless" study are also discussed. The book describes how, in the aftermath of a disastrous accident with Ship #1 in 1995, Ship #2 was prepared for its outstanding participation in the Paris Air Show. The aircraft was then shipped back to Edwards AFB and put into storage until the late 1990s, when it was refurbished for participation in the U. S. Navy's VECTOR program. The book ends with a comprehensive discussion of lessons learned and includes an Appendix containing detailed information. *AIAA Aerospace Sciences Meeting and Exhibit, 42nd*
Dr Alison Talbot-Smith, an experienced doctor and researcher, and Professor Allyson M. Pollock, one of the UK's leading authorities on the NHS, give a lucid and incisive account of the new NHS - which has emerged from a far-reaching programme of market-oriented changes. Providing an authoritative and accessible

overview of the new NHS, the book describes: the structures and functions of the new organizations in each of the devolved countries the funding of NHS services, education, training and research and resource allocation the regulation of the new NHS systems and workforce the relationships between the NHS, the Department of Health, local authorities and regulatory bodies, and between the NHS and the private sector the future implications of current policies. This is an indispensable resource for those working in healthcare today as clinicians, academics, researchers and managers. It will also be essential reading for academics, students, and researchers in related fields, as well as the general public.
