Caring for Populations Lippincott
Williams & Wilkins
The second edition of Community Health

Nursing in Canada has been extensively revised and is informed by the most current research available. This comprehensive textbook introduces undergraduate nursing students to community health nursing concepts, skills, and practice. This text also addresses the increasing awareness of social justice and the impact of society

on individual health, with a shift from individual-centred care to population- and community-centred care. A completely new chapter includes specific, practical information in helpful case studies with questions for students to address and example nursing reflections. Critical View boxes with discussion questions on contemporary issues have been strengthened to include a social justice and equity lens. Determinants of Health boxes have been expanded to explore more critically the meaning and impact of facts presented to stimulate class discussion. Extensive new section on Aboriginal Peoples in Canada; updated section on working with newcomers. Updated information includes SARS, the H1N1 pandemic, updated global TB statistics, and global

and Canadian HIV/AIDS information. WebLinks at the end of each chapter and a robust student and instructor website on Evolve point the way to further resources for research and study. *Leading Change, Advancing Health* Little Brown GBR. Facilitating Community Research for Social Change asks: what does ethical research facilitation look like in projects that seek to move toward social change? How can scholars weave political and social justice through multiple levels of the research process? This edited collection presents chapters that investigate research facilitation in ways that specifically attempt to disrupt and challenge anti-Indigenous and anti-Black racism, ableism, homophobia, transphobia, patriarchy, and sexism to

work toward social change. It also explores what it means to develop facilitation practices across multiple contexts and research settings, including specific facilitation methods considered by researchers working with visual and community-based methods with Black, Indigenous, and racialized communities. The complexities of how scholars negotiate decisions within their research with people and communities have an effect not only on how researchers construct their participants and communities, but also on the overall purpose of projects, the ways their projects are shared and disseminated, and what is learned in the doing of facilitation. This book will be of great interest to both emerging and established researchers working within

the social sciences. It specifically attends to diverse fields within the social sciences that include health, media studies, environmental studies, social work, sociology, education, participatory visual research methodologies, as well as the evolving field of digital humanities.

How do communities protect and improve the health of their populations? Health care is part of the answer but so are environmental protections, social and educational services, adequate nutrition, and a host of other activities. With concern over funding constraints, making sure such activities are efficient and effective is becoming a high priority. *Improving Health in the Community* explains how population-based performance monitoring programs can help communities point their efforts in the right direction. Within a broad definition of community health, the committee addresses factors surrounding the implementation of

performance monitoring and explores the "why" and "how to" of establishing mechanisms to monitor the performance of those who can influence community health. The book offers a policy framework, applies a multidimensional model of the determinants of health, and provides sets of prototype performance indicators for specific health issues. Improving Health in the Community presents an attainable vision of a process that can achieve community-wide health benefits.

Professional Issues in Nursing

Community & Public Health Nursing: Promoting the Public's Health
Public health practice focuses on the prevention of disease and disability as a means of promoting the health of individuals and their communities.

Achieving this is dependent on nurses and public health practitioners implementing the core functions of practice—assessment, assurance, and policy development. Because the public health workforce is composed of individuals from a number of disciplines with varying areas of expertise, there is a clear need for a thorough examination of the core competencies necessary for successful public health based on community needs. Developed as an advanced text for students in public and community health nursing, *Public and Community Health Nursing Practice* presents a comprehensive summary of the core functions of population-based practice. This practice is the cornerstone of the Healthy People 2010 national objectives, and the foundation upon

which the health of a given community may be ensured. The book's population-based approach, theoretical content, and emphasis on evidence-based research are perfectly suited for faculty and students in nursing, public health, and behavioral medicine. Author Demetrius James Porche also includes current public health and nursing practice, making this a unique and indispensable reference for public and community health nurses and nursing administrators, as well as practitioners in other specialties, such as family or primary care nursing. The book also includes appendices, illustrations, tables, and chapter summaries that reiterate important public and community population-based health nursing content.

Ensuring students meet the competencies outlined in the Quad Council of Public Health Nursing Organizations (ACHNE, 2011) and AACN's (2008) publication *Essentials of Baccalaureate Education for Professional Nursing Practice Community and Public Health Nursing*, the 3rd Edition of *Community & Public Health* is a primer to community, public, and population health nursing that develops students' abstract critical thinking skills and complex reasoning abilities through case studies, exercises, and examples throughout the highly illustrated text. Authors DeMarco & Healey-Walsh introduce public health concepts from an evidence-based perspective, allowing students to make connections between

data and practice decisions. Because evidence-based practice guides quality performance improvements, the authors teach students to gather, assess, analyze, apply, and evaluate evidence—derived from epidemiology and other sources— for making public health practice decisions and for planning the care of individuals, families, and groups in the community. Examples assist students in interpreting and applying statistical data. The authors integrate timely topics (major challenges to nursing practice in the community, community and public health nursing specialties, cultural diversity, health disparities, globalism, epidemiology and basic biostatistics, and ethical considerations, Preventative immunizations, political proactiveness,

advanced practice preparation, sustainable health goals, ebola, telehealth, opioid epidemic, veterans and LBGQ as a underserved populations, iPrepare, health literacy, health promotion conferences, and Healthy People 2020.) Special attention will be given to add additional features and ancillaries that allow students to actively learn. Healthy People 2020, and students will complete short active learning activities/questions will allow students apply the goals to real-life scenarios. Community health workers (CHWs) are an increasingly important member of the

healthcare and public health professions who help build primary care capacity. Yet, in spite of the exponential growth of CHW interventions, CHW training programs, and CHW certification and credentialing by state agencies, a gap persists in the literature regarding current CHW roles and skills, scope of practice, CHW job settings, and national standards. This collection of contributions addresses this gap by providing information, in a single volume, about CHWs, the roles CHWs play as change agents in their communities, integration of CHWs into healthcare teams, and support and recognition of the CHW profession. The book supports the CHW definition as defined by the American Public Health Association (APHA), Community Health

Worker Section (2013), which states, “A community health worker is a frontline public health worker who is a trusted member of and/or has an unusually close understanding of the community served.” The scope of the text follows the framework of the nationally recognized roles of CHWs that came out of a national consensus-building project called “The Community Health Worker (CHW) Core Consensus (C3) Project”. Topics explored among the chapters include: Cultural Mediation Among Individuals, Communities, and Health and Social Service Systems Care Coordination, Case Management, and System Navigation Advocating for Individuals and Communities Building Individual and Community Capacity Implementing Individual and Community

Assessments Participating in Evaluation and Research Uniting the Workforce: Building Capacity for a National Association of Community Health Workers Promoting the Health of the Community is a must-have resource for CHWs, those interested in CHW scope of practice and/or certification/credentialing, anyone interested in becoming a CHW, policy-makers, CHW payer systems, CHW supervisors, CHW employers, CHW instructors/trainers, CHW advocates/supporters, and communities served by CHWs.
