Earth and space sciences (ESS) investigate processes that operate on Earth and also address its place in the solar system and the galaxy. Thus ESS involve phenomena that range in scale from the unimaginably large to the invisibly small.7 Dimension 3: Disciplinary Core Ideas - Earth and Space ... About 97.5% of the water is saline; the remaining 2.5% is fresh water. Most fresh water, about 68.7%, is present as ice in ice caps and glaciers.Earth - WikipediaEarth - Earth - The outer shell: Earth's outermost, rigid, rocky layer is called the crust. It is composed of low-density, easily melted rocks; the continental crust is predominantly granitic rock (see granite), while composition of the oceanic crust corresponds mainly to that of basalt and gabbro. Analyses of seismic waves, generated by earthquakes within Earth's interior, show that the ...Earth - The outer shell | BritannicaOceanic crust, the outermost layer of Earth's lithosphere that is found under the oceans and formed at spreading
