Working with Qualitative Data Burns & Oates

A comprehensive guide to carrying out Qualitative Secondary Analysis (QSA) that brings together expert advice and professional insight from leading researchers who have developed innovative theories and methods of QSA. Exploring crucial components of research and analysis—such as where to find resources, how to search within a resource, and working with both paper archives and non-textual data—each chapter offers insightful case studies, links to further reading and applied helpful hints and tips to help effectively apply these innovations to further the reader's own research. A must read for Social Science students, early career researchers and researchers new to the field of QSA, this text will help readers through every aspect of a research process using QSA, from application to implications.

Quantitative Methods in Educational Research World Scientific
 This book is about emotions and reflexivity when doing field research in health and social care settings. Health and social care students often undertake field research in their own area of practice using observation and interviews. All contributing authors have a dual identity as researchers and health or social care professionals. Their chapters draw on research carried out in a number of fields including HIV related infertility and adoption, primary care in Africa, cancer and palliative care, infertility and excluded young people to explore issues relevant to emotions and reflexivity from the perspective of the researcher and research participants. The book was born of the two editors, who are experienced research supervisors, observing that many PhD students struggle to manage the emotions elicited in the field when researching. They identify three main causes - health and social care deals with painful topics; observation and interviews bring student into contact with powerful feelings which need processing; there is very little advice and discussion of how a PhD student manages emotions in the field and students therefore frequently struggle on their own. This insightful volume will be of great interest to scholars and students in all areas of academic study, but particularly to those who chose to study health and social care whether they are professionals or not.

 Questions about change in social and personal life are a feature of many accounts of the contemporary world. While theories of social change abound, discussions about how to research it are much less common. This book provides a timely guide to

qualitative methodologies that investigate processes of personal, generational and historical change. The authors showcase a range of methods that explore temporality and the dynamic relations between past, present and future. Through case studies, they review six methodological traditions: memory-work, oral/life history, qualitative longitudinal research, ethnography, intergenerational and follow-up studies. It illustrates how these research approaches are translated into research projects and considers the practical as well as the theoretical and ethical challenges they pose. Research methods are also the product of times and places, and this book keeps to the fore the cultural and historical context in which these methods developed, the theoretical traditions on which they draw, and the empirical questions they address. **Researching Social Change** is an invaluable resource for researchers and graduate students across the social sciences who are interested in understanding and researching social change.

Emotions and Reflexivity in Health & Social Care Field Research Bloomsbury Publishing
 The Earth has limited material and energy resources. Further development of the humanity will require going beyond our planet for mining and use of extraterrestrial mineral resources and search of power sources. The exploitation of the natural resources of the Moon is a first natural step on this direction. Lunar materials may contribute to the betterment of conditions of

people on Earth but they also may be used to establish permanent settlements on the Moon. This will allow developing new technologies, systems and flight operation techniques to continue space exploration. In fact, a new branch of human civilization could be established permanently on Moon in the next century. But, meantime, an inventory and proper social assessment of Moon's prospective energy and material resources is required. This book investigates the possibilities and limitations of various systems supplying manned bases on Moon with energy and other vital resources. The book collects together recent proposals and innovative options and solutions. It is a useful source of condensed information for specialists involved in current and impending Moon-related activities and a good starting point for young researchers.

This Third Edition of **Doing Research with Children** is practical

introduction to the process of designing, doing and writing up research with children and young people. At the centre is a commitment to engaging with children and young people as active research participants rather than as passive subjects. In the new edition, you'll find up to date information on the fast-changing political and ethical debates around research with children and young people as well as guidance on how to carry out research yourself. Divided into three sections, the new edition covers: -the main theories and approaches of research with children and young people -expanded guidance on research ethics -techniques for conducting both qualitative and quantitative research -more on analysing your research -a brand new chapter on communicating your research findings. This is a must-have guide for students and practitioners who are engaging in research with children and young people.

Remote Compositional Analysis John Wiley & Sons
Audouin Dollfus Observatoire de Paris, Section de Meudon, 92195 Meudon, FRfu~CE The North Atlantic Treaty Organization (NATO) and, in particular, its Department of Scientific Affairs headed by Dr. C. Sinclair, actively supports new fields of science. The recent exploration of the outer parts of the Solar System by spacecraft focused the attention of a large community of scientists on the problem of ices, which play a major role in the accretionary processes in space except for the close neighborhood of the Sun and of other stars. NATO responded to this new interest by agreeing to sponsor an Advanced Research Workshop "Ices in the Solar System", provided a proper organizing body could be set up. It was a pleasure to organize such a workshop jointly with Professor Roman Smoluchowski who had earlier organized similar conferences. I knew from the experience of others who managed such meetings in the past that there would be much work, but the opportunity of cooperating with Smoluchowski was very attractive and convinced me to agree. If well organized, the whole project promised to be more than rewarding for a large community of scientists, both in the short run and in the long run, by clarifying certain outstanding questions in astrophysics. It became clear that a well-organized international conference would attract top scientists and help unravel many fundamental problems.
