The Quest for Health

Reform: A Satirical History brings together two American political traditions - editorial cartooning as a medium for trenchant contemporary commentary and the long-standing effort to achieve universal national health reform. As early as the nineteenth century, caricatures and cartoons parodied the leading personalities and institutions in American politics. This book focuses on national health reform as told through the vision of popular editorial cartoonists.

This book is an analysis of energy and food subsidies in the MENA region between 2010 and 2014. Using the World Bank's

proprietary SUBSIM model, the book studies the distribution of subsidies and the simulation of subsidy reforms across eight countries within in a partial equilibrium framework. The distributional analysis of subsidies provides information on who benefits from existing subsidies, while the simulations of subsidy reforms provide information on the outcomes of the reforms in terms of government budget, household welfare, poverty, inequality, and the trade-offs between these outcomes. This focus provides governments with the essential information they need to make decisions on subsidy reforms and consumers with a clear sense of which

programs and reforms are successful. The book highlights the historical roots of subsidies, the real trigger of subsidy reforms, and the complexity of subsidy reforms. It discusses the pros and cons of radical and gradualist approaches to reforms, the use of compensation mechanisms and their implications, the advantages and disadvantages of public information campaigns, the political economy of targeting different economic populations, the political timing of reforms, and whether, overall, the reforms observed in the MENA region have been successful. The first book on subsidies in the MENA region that is based on primary

micro data, this book is useful for researchers and graduate students studying political economy and working with microsimulation modelling instruments as well as government officials engaged in subsidies reforms, research institutes and private consulting groups advising governments on subsidy reforms.

This book is an examination of post-colonial land reforms across various African states. One of the decisive contradictions of colonialism in Africa was the distortion of use, access to and ownership of land. Land related issues and the need for land reform have consistently occupied a unique position in

public discourse in Africa. The post-colonial African states have had to embark on concerted efforts at redressing historical grounded land policies and addressing the growing needs of land by the poor. However, agitations for land continue, while evidence of policy gaps abound. In many cases, policy change in terms of land use, distribution and ownership has reinforced inequalities and affected power and social relations in respective post-colonial African countries. Land has assumed major causes of structural violence and impediments to human and rural development in Africa; hence the need for holistic assessment of land reforms in post-

colonial African states. The central objective of the text is to identify post-independence and current trends in land reform and to address the grievances in relation to land use, ownership and distribution. The book suggests practicable policy options towards addressing the land hunger and conflict, which could derail the 'moderate' socio-economic achievements and political stability recorded by post-colonial African nation-states. The book draws its strength and uniqueness from its adoption of country-specific case studies, which places the book in context, and utilizes field studies methodology which generate new knowledge on the

continental land question. Taking a holistic approach to understanding Africa's land question, this book will be attractive to academicians and students interested in policy and development, African politics, post-colonial development and policy, and conflict studies as well as policy-makers working in relevant areas.

Many books have been written about tax reform, but none offer the pragmatic and understandable approach that you'll find in this treatise filled with a nonpartisan set of solutions to fix an antiquated and indecipherable tax system. James C. Tanner, a certified public accountant with more than four decades of experience, explores how we can: • Create a fair and logical tax framework by rethinking income exclusions, exemptions, deductions, credits, tax brackets, capital gains, and other tax alternatives; • reform tax expenditures, including health insurance and medical costs, home mortgage

and other interest deductions, retirement plan deductions, charitable donations, and capital gains on assets sold and transferred; • lower the tax rates for most individual and corporate taxpayers while making our US companies more competitive with their foreign counterparts. Tanner also outlines how historical decisions and legislative proposals led to our current tax laws under the premise that we can't fix them without understanding why they were created in the first place. For those who want to participate in the national debate on federal tax reform, it begins with a firm understanding of the system and the practical proposals in

The Quest for Educational Excellence
University of Illinois Press
This book investigates and analyses critical issues in education reform and discusses possible pitfalls in the current global drive to promote excellence. Instead of documenting the successes and frustrations encountered by education reformers in specific jurisdictions, this book aims to offer directions for education reformers, and sets out to be prescriptive rather than descriptive. While the cases covered here are focused on Hong Kong, they are no less useful in throwing light upon the direction of education reform all

over the world. The first section of the volume, “Conceptual Framework”, provides the theoretical underpinnings for the design and implementation of education reform. The next two sections, “Reform of Tertiary Education” and “Experiments, Dilemmas, and Risks in Secondary Schools” look at reform at the tertiary and secondary levels in greater detail. The final section, “Ideals vs. Reality: the Interplay of Diverse Interests and Diverse Perceptions”, looks at the conflicting goals and perceptions of different “stakeholders”, with a concluding chapter that summarizes the main lessons to be learnt. This book will be of interest to

scholars, educators, parents, policymakers, politicians, and all who are concerned about our younger generation and their future. “The editors, Lok Sang Ho, Paul Morris and Yueping Chung are to be congratulated on producing a volume which is both hard-hitting and insightful about education reforms in Hong Kong. The range of experiences of the contributing authors contribute to a most interesting mix of perspectives about education reform. The focus is squarely on Hong Kong, in terms of general policy and reform issues, followed by more specific chapters dealing with issues of graduate teachers, English as a medium of instruction, and the role of the

media. However, the issues raised are very applicable to many countries. This book is a valuable contribution to the literature on education reform.”

The Reform of Governance is a translated collection of articles providing a look at how scholars in China have been assessing their country's recent governmental history. This volume, as well as the others in the SSRC series, provide western scholars with an accessible English language look at the state of current scholarship in China on the interplay of the

country's Democratic reforms, electoral rules, accountability and social welfare.

The series Religion and Society (RS)

contributes to the exploration of religions as social systems – both in Western and non-Western societies;

in particular, it examines religions in their differentiation from, and intersection with, other cultural systems, such as art, economy, law and politics. Due attention is given to paradigmatic case or comparative studies that exhibit a clear theoretical orientation with the empirical and historical data of religion and such aspects of religion as ritual, the religious imagination, constructions of tradition, iconography, or media. In addition, the formation of religious communities, their construction of identity, and their relation to society and the wider public are key issues of this series.

In the early years of the Great Depression, the Marine Workers Industrial Union (MWIU) was a colorful presence on the American Waterfront. In 1935, the MWIU seemed to vanish, closing its halls and stopping its publications. Vernon L. Pedersen convincingly demonstrates that the MWIU did not vanish—instead it was ordered by the Moscow-based Communist International to send its members into mainstream ALF unions and take over from the inside. Initiated by accident on the west coast and deliberately duplicated in the east, the Communists seized control of the west coast longshoremen's union, destroyed the

International Seamen's Union, and created the Communist-dominated National Maritime Union.

Burma Redux

Interorthodox Press
Far from seeing international reform as well-meaning but potentially irresponsible, Progressive Realists like E.H. Carr, John Herz, Hans J. Morgenthau, and Reinhold Niebuhr developed forward-looking ideas which offer an indispensable corrective to many presently influential views about global politics. Progressive Realism, Scheuerman argues, offers a compelling and provocative vision of radical global change which, when properly interpreted, can help buttress current efforts

to address the most pressing international issues. --

A Quest for Reform I.B. Tauris
Examines the structure and progress of local government in Massachusetts. The author shows that contrary to a prevailing sentiment that Massachusetts local government is archaic and outmoded, considerable progress has been made in an incremental fashion. This progress is reflected in modernized local government structures and in a new mood supportive of professionalism in the ranks. An interesting volume for courses on state and local government, particularly Massachusetts.

Contemporary Myanmar faces a number of political challenges, and it is unclear how other nations should act in relation to the country. Prioritizing the opinions of local citizens and reading them against the latest scholarship on this issue, Ian Holliday affirms the importance of foreign

interests in Myanmar's democratic awakening, yet only through committed, grassroots strategies of engagement encompassing foreign states, international aid agencies, and global corporations. Holliday supports his argument by using multiple sources and theories, particularly ones that take historical events, contemporary political and social investigations, and global justice literature into account, as well as studies that focus on the effects of democratic transition, the aid industry, and socially responsible corporate investing and sanctions. One of the only volumes to apply broad-ranging global justice theories to a real-world nation
