Core J2EE Patterns - Data Access Object Context. Access to data varies depending on the source of the data. Access to persistent storage, such as to a database, varies greatly depending on the type of storage (relational databases, object-oriented databases, flat files, and so forth) and the vendor implementation.

Core J2EE Patterns - Data Access Object - Oracle

As with all design patterns, it is just a pattern. Therefore, how you

implement it is up to you, as long as you follow the general guidelines. A Bit of History. The State pattern, like most good patterns, is language-agnostic. I came close to figuring out this pattern a long time ago in a job far, far away, before there were pattern catalogs. The State Pattern | Java Magazine - Oracle Blogs The most popular pattern, up until Java 6 is: Connection conn = null; try { // initialize connection // use connection } catch { // handle exception } finally { if (conn != null) { try { conn.close(); } catch (Exception e) { /* handle close exception, quite usually ignore */ } } } With Java 7 this will become less cumbersome with its try-with-resource

construct. Java / JDBC: Best design pattern to close database ... Hashing a Grid Pattern. More than a dozen members of the global Oracle community participated in the project, including Oracle Vice President and Chief SOA Technologist David Chappell and Senior Principal Product Manager and SOA Architect Clemens Utschig-Utschig. Grid computing was Chappell's point of entry into the SOA Design Patterns project. Ian Darwin. Ian Darwin (@Ian_Darwin) is a Java Champion who has done all kinds of development, from mainframe applications and desktop publishing applications for UNIX and Windows, to a

desktop database application in Java, to healthcare apps in Java for Android. He's the author of Java Cookbook and Android Cookbook (both from O'Reilly). He has also written a few courses and taught many at ...
