Breakthroughs in Research and Practice

Addison-Wesley Professional

Self-regulated learning (SRL) subsumes key aspects of the learning process, such as cognitive strategies, metacognition and motivation, in one coherent construct. Central to this construct are the autonomy and responsibility of students to take charge of their own learning. Skills for self-

regulation can be encouraged both directly and indirectly through a range of learning activities. In this book we look specifically at the ways in which technology enhanced learning environments (TELEs) have been used to support self-regulation. The book provides an overview of recent studies on SRL in TELEs in Europe - a perspective which is new and has not been articulated hitherto. It addresses conceptual and methodological questions as well as practices in technology enhanced learning.

While the focus is on European studies, we are aware that much of the groundwork in the field of SRL has emanated from the United States. The book is divided into three parts: (A) Foundations of SRL in TELEs, (B) Empirical studies on SRL in TELEs and (C) SRL in TELEs: perspectives on future developments. The book presents a rich resource of information for researchers and educators at all levels who are interested in supporting the acquisition of SRL through TELEs. *Evolution and Emerging Technologies*

Hasanraza Ansari

While vols. III/29 A, B (published in 1992 and 1993, respectively) contains the low frequency properties of dielectric crystals, in vol. III/30 the high frequency or optical properties are compiled. While the first subvolume 30 A contains piezooptic and elastooptic constants, linear and quadratic electrooptic constants and their temperature coefficients, and relevant refractive indices, the present subvolume 30 B covers second and third order nonlinear optical susceptibilities. For the reader's convenience an alphabetical formula index and an alphabetical index of chemical, mineralogical and technical names for all substances of volumes 29 A, B and 30 A, B are included.

Essential Business Skills for Succeeding in Health Care IGI Global

Automating Self Evaluations for Software Engineers

Software Management IGI Global

This book explores the domain of software maintenance management and provides road maps for improving software maintenance organizations. It describes full maintenance maturity models organized by levels 1, 2, and 3, which

allow for benchmarking and continuous improvement paths. Goals for each key practice area are also provided, and the model presented is fully aligned with the architecture and framework of software development maturity models of CMMI and ISO 15504. It is complete with case studies, figures, tables, and graphs.

Information Literacy Instruction that Works IOS Press

Computer programs and processes that take into account the goals and needs of the user meet with the greatest success, so it behooves software engineers to consider the human element inherent in every line of code they write. Human Factors in Software Development and Design brings together high quality research on the influence and impact of ordinary people on the software industry. With the goal of improving the quality and usability of computer technologies, this premier reference is intended for students and practitioners of software engineering as well as researchers, educators, and interested laymen.

Online and Distance Learning: Concepts, Methodologies, Tools, and Applications
John Wiley & Sons

This is a book for people who are struggling to find their way out of a cave of anxiety, depression, and suicidal thoughts—and for anyone who cares for someone who's been lost in that cave. Suicide is now the leading cause of death among young adults 18-34, and the fourth-leading cause of death among the middle-aged. Just as a computer's hardware determines its foundational capabilities and its software determines how it interfaces with the world, humans' hardware is tied to our biology and our software dictates how we relate to others and ourselves. Together, these parts of our identity determine our functionality, limitations, and possibilities. We become the story we have decided to live inside. When Jesus said, "I have come to set captives free," He meant that He came to "de-bug" our programming. Jesus invites us to partner with Him to bring to the surface and then move past our debilitating bugs. This book is a conversation between a minister and a psychiatrist. Informed by the clinical realities of anxiety, depression, and suicide, the authors draw from the transformational relational strategies of

Jesus to chart a path into life and freedom.
Delivering Non-Technical Knowledge and Skills Springer Nature

Readers will find strategies and techniques for teaching college and university freshmen, community college students, students with disabilities, and those in distance learning programs.

Evaluations and Frameworks J. Ross Publishing

The book discusses reusable design techniques, "dynamic standardization" and other organizational concepts, as well as computer-aided tools used in Japanese software factories. It also provides numerous suggestions for effectively managing any series of design and engineering projects or "intellectual work," in general, where there is potential sharing across multiple products or operations that are usually managed independently.

Blended Learning Environments for Adults: Evaluations and Frameworks IGI Global

Software engineering is of major importance to all enterprises; however, the key areas of software quality and software process improvement standards and models are currently geared toward large organizations, where most software

organizations are small and medium enterprises. *Software Process Improvement for Small and Medium Enterprises: Techniques and Case Studies* offers practical and useful guidelines, models, and techniques for improving software processes and products for small and medium enterprises, utilizing the authoritative, demonstrative tools of case studies and lessons learned to provide academics, scholars, and practitioners with an invaluable research source.

Rapid Instructional Design John Wiley & Sons

Physicians are increasingly taking on new roles as executives and managers in today's health care delivery system. This work provides an overview of the essential business management skills that physician managers need to succeed.

Software Development IGI Global
 This book will help you to manage and control the quality of your organization's software products. Continually dealing with the problems caused by software defects can be both time-consuming and demanding but Sami Zahran's pragmatic approach will take you from reactive fire-fighting to a preventative culture of

disciplined and continuous process improvement. This book will help you: establish a process-focused software development organization design and implement procedures for developing quality software in time and within budget benchmark your organization against the industry standards for the software process, including the Capability Maturity Model (CMM), ISO 9001, the new standard ISO/IEC 15504 (originally known as SPICE) and Bootstrap.

Automating Self Evaluations for Software Engineers American Library Association

"This book demonstrates the view that Information and Communication Technologies should not be considered as a neutral teaching medium, but instead be implemented under pedagogical conditions; aiming at the development of critical thinking through their creative integration into the social and cultural context"--

Teaches HRM strategies and theories that any manager not just those in HR needs to know about recruiting, selecting, training, and compensating people. CRC Press

This is the second edition of the best-selling book that shows how to get instructional design done fast and get it done right! If you need a basic understanding of what instructional design is and a hands-on, to-the-point method of ensuring that the training and performance interventions you put into place meet the needs of your staff and your organization, this book is for you. It offers a no-nonsense walk through all the steps in the instructional design process and each step is explained in language that is conversational and easy to understand. This new edition addresses such topics as learning analysis, return on investment, and designing asynchronous and synchronous e-learning, as well as a wealth of illustrative examples of storyboards and professional commentary and case studies from professionals in the field.

7th SEI CSEE Conference, San Antonio, Texas, USA, January 5-7, 1994.

Proceedings John Wiley & Sons

Providing essential tools to transform college piano students into professional piano teachers, Courtney Crappell's *Teaching Piano Pedagogy* helps teachers

develop pedagogy course curricula, design and facilitate practicum-teaching experiences, and guide research projects in piano pedagogy. The book grounds the reader in the history of the domain, investigates course materials, and explores unique methods to introduce students to course concepts and help them put those concepts into practice. To facilitate easy integration into the curriculum, Crappell provides example classroom exercises and assignments throughout the text, which are designed to help students understand and practice the related topics and skills. *Teaching Piano Pedagogy* is not simply a book about teaching piano--it is a book about how piano students learn to teach.

Outsourcing Software Development

Offshore John Wiley & Sons

"This book gives a general coverage of learning management systems followed by a comparative analysis of the particular LMS products, review of technologies supporting different aspect of educational process, and, the best practices and methodologies for LMS-supported course delivery"--Provided by publisher.

Springer Science & Business Media
This book presents a comprehensive documentation of the scientific outcome of 14 satellite events held at the 13th International Conference on Model-Driven Engineering, Languages and Systems, MODELS 2010, held in Oslo, Norway, in October 2010. Besides the 21 revised best papers selected from 12 topically focused workshops, the post-proceedings also covers the doctoral symposium and the educators symposium; each of the 14 satellite events covered is introduced by a summary of the respective organizers. All relevant current aspects in model-based systems design and analysis are addressed. This book is the companion of the MODELS 2010 main conference proceedings LNCS 6394/6395.

How to Create and Use Rubrics for Formative Assessment and Grading CRC Press

Technological Developments in Networking, Education and Automation includes a set of rigorously reviewed world-class manuscripts addressing and detailing state-of-the-art research projects in the following areas: Computer Networks: Access Technologies, Medium

Access Control, Network architectures and Equipment, Optical Networks and Switching, Telecommunication Technology, and Ultra Wideband Communications. Engineering Education and Online Learning: including development of courses and systems for engineering, technical and liberal studies programs; online laboratories; intelligent testing using fuzzy logic; taxonomy of e-courses; and evaluation of online courses. Pedagogy: including benchmarking; group-learning; active learning; teaching of multiple subjects together; ontology; and knowledge management. Instruction Technology: including internet textbooks; virtual reality labs, instructional design, virtual models, pedagogy-oriented markup languages; graphic design possibilities; open source classroom management software; automatic email response systems; tablet-pcs; personalization using web mining technology; intelligent digital chalkboards; virtual room concepts for cooperative scientific work; and network technologies, management, and architecture. Coding and Modulation: Modeling and Simulation, OFDM technology, Space-time Coding, Spread

Spectrum and CDMA Systems. Wireless technologies: Bluetooth, Cellular Wireless Networks, Cordless Systems and Wireless Local Loop, HIPERLAN, IEEE 802.11, Mobile Network Layer, Mobile Transport Layer, and Spread Spectrum. Network Security and applications: Authentication Applications, Block Ciphers Design Principles, Block Ciphers Modes of Operation, Electronic Mail Security, Encryption & Message Confidentiality, Firewalls, IP Security, Key Cryptography & Message Authentication, and Web Security. Robotics, Control Systems and Automation: Distributed Control Systems, Automation, Expert Systems, Robotics, Factory Automation, Intelligent Control Systems, Man Machine Interaction, Manufacturing Information System, Motion Control, and Process Automation. Vision Systems: for human action sensing, face recognition, and image processing algorithms for smoothing of high speed motion. Electronics and Power Systems: Actuators, Electro-Mechanical Systems, High Frequency Converters, Industrial Electronics, Motors and Drives, Power Converters, Power Devices and Components, and Power Electronics.

Human Resource Management IGI Global
The capability to design quality software and implement modern information systems is at the core of economic growth in the 21st century. This book aims to review and analyze software engineering technologies, focusing on the evolution of design and implementation platforms as well as on novel computer systems.

Learning Management System Technologies and Software Solutions for Online Teaching: Tools and Applications Automating Self Evaluations for Software Engineers UNBIASED, Useful New Basic Interactive Automated Self-Evaluation Demonstration, is a web application designed to tackle the challenges of performing a self-evaluation by automatically gathering data from existing third party APIs, performing an analysis on the data, and generating a self-evaluation starting point for software engineers to build off. The third party APIs currently supported are: Bitbucket, Gmail, Google Calendar, GitHub, and JIRA. Human Resource Management Teaches HRM strategies and theories that any manager not just those in HR needs to know about recruiting, selecting, training, and

compensating people.

In Offshore Software Development: Making It Work, hands-on managers of Offshore solutions help you answer these questions: What is Offshore and why is it an IT imperative? What do you need to do to successfully evaluate an Offshore solution? How do you avoid common pitfalls? How do you confront security an

Overcoming Challenges in Software Engineering Education: Delivering Non-Technical Knowledge and Skills Springer Science & Business Media
Software Development is the most thorough, realistic guide to "what works" in software development - and how to make it happen in your organization.

Leading consultant Marc Hamilton tackles all three key elements of successful development: people, processes, and technology. From streamlining infrastructures to retraining programmers, choosing tools to implementing service level agreements, Hamilton unifies all of today's best practices - in management, architecture, and software engineering.
