 Satellite Communications Training Workshop course focuses on basics of satellite communications technologies including key concepts, system survey, transponders, payloads, systems engineering and architecture of satellite systems, system requirements, voice, video, imaging, sensor fusion, IP networking, protocols UDP/TCP/IP, concept of operations (ConOps), analyzing end-to-end. satellite payload requirements, constellation, cybersecurity, threat

analysis and mitigation.
 SATCOM Training | Satellite Communications Training | Courses
 This short course is designed to introduce the main concepts behind 5G and satellite communications. This will be considered on a high-level basis, with focus on the key components, 5G and satellite access architecture options and considerations. It will also provide an insight into satellite communications and its application with regards to 5G.
 5G and Satellite Communications Course - Mpirical
 A comprehensive, single-source reference on satellite technology and its applications, Satellite Technology: Principles and Applications, Second Edition includes the latest developments on the topic. Covering the features and facilities of satellites and satellite launch vehicles, with an emphasis on the fundamental principles and concepts, the authors provide readers with a complete understanding of the technology.
