... Basic\_Techniques\_in\_Molecular\_Biology.pdf - See ... One of the

most basic techniques of molecular biology to study protein

function is expression cloning. In this technique, DNA coding for a

protein of interest is cloned (using PGR and/or restriction

enzymes) into a plasmid (known as an expression vector). This

plasmid may have special promoter elements to drive production

of the protein of interest, and may also have antibiotic resistance

markers to help follow the plasmid. Techniques used in Molecular

Biology You'll learn about the concept of genetic engineering and

study various techniques. Our lessons will introduce you to ideas

that include DNA plasmids, recombinant DNA and restriction

enzymes. Basic Molecular Biology Laboratory Techniques - Videos
