C# PROGRAMMING This tutorial is designed for the beginners-intermediate programmer; someone that has seen and used C previously and has a rudimentary understanding of the basics. This tutorial will explore the advanced build-in and user created features of the language. C++ PROGRAMMING C++ is a high level language that is an iteration of C that includes more features and improves upon already existing ones. C++ is designed to provide efficient programs, it has the philosophy of "zero overhead" that effectively means that all extras are removed, this means that there is less support for a programmer with error messages etc and limited functionality in

libraries, but the code will run fast and effectively. This means C++ is really only used in situations where efficiency is crucial, this is why C++ is commonly used in games as well for example, where every ounce of hardware is to be utilized efficiently.
