A Practical Approach to Emergencies Elsevier Health Sciences

Combustion Theory delves deeper into the science of combustion than most other texts and gives insight into combustions from a molecular and a continuum point of view. The book presents derivations of the basic equations of combustion theory and contains appendices on the background of subjects of thermodynamics, chemical kinetics, fluid dynamics, and transport processes. Diffusion flames, reactions in flows with negligible transport and the theory of pre-mixed flames are treated, as are detonation phenomena, the combustion of solid propellents, and ignition, extinction, and flammability phenomena.

Mastering Cloud Computing is designed for undergraduate students learning to develop cloud computing applications. Tomorrow's applications won't live on a single computer but will be deployed from and reside on a virtual server, accessible anywhere, any time. Tomorrow's application developers need to understand the requirements of building apps for these virtual systems, including concurrent programming, high-performance computing, and data-intensive systems. The book introduces the principles of distributed and parallel computing underlying cloud architectures and specifically focuses on virtualization, thread programming, task programming, and map-reduce programming. There are examples demonstrating all of these and more, with exercises and labs throughout. Explains how to make design choices and tradeoffs to consider when building applications to run in a virtual cloud environment Real-world case studies include scientific, business, and energy-efficiency considerations

APLS: The Pediatric Emergency Medicine Resource, Revised Fourth Edition offers the information necessary to assess and manage critically ill or injured children during the first hours in the emergency department. The Revised Fourth Edition of APLS is truly the body of knowledge in pediatric emergency medicine. If you want the newest, most comprehensive reference on pediatric emergency medicine, the Revised Fourth Edition will meet your needs. Developed by expert authors, editors, and faculty from both AAP and ACEP, the new APLS is a unique teaching and learning system for individual physicians, residents, students, and APLS instructors and course directors. The Fourth Edition of APLS has been revised and expanded to cover new conclusions drawn from reason, fact, and experience to the benefit of sick and injured children worldwide. Together, AAP and ACEP developed APLS into a new, stand-alone course, offering continuing medical education units and an APLS course completion card. The course is highly interactive with small group scenarios, hands-on skill stations, and case-based lectures.

The new edition of Major Incident Medical Management and Support is a vital component in the blended learning course from Advanced Life Support Group (ALSG), which aims to provide hospital staff at all levels with essential information on the preparation, management and support elements of dealing with casualties in a major incident. Split into five sections, each focuses on the elements requisite in preparing for, and responding, to a major incident. The first section discusses the epidemiology and incidences of major incidents and the structured approach to the hospital response. The second section contains the preparation required in planning for major incidents, including equipment and training. The third section covers the management of a major incident, concentrating on the clinical, nursing and management hierarchies. The fourth includes the various stages of support in a major incident, including declaring an incident and activating the plan, the reception, triage, definitive care and recovery phases of an incident. The final section focuses on special incidents which require additional consideration, including those involving hazardous chemicals, burns and children. Written in collaboration with the National Emergency Planning, Major Incident Medical Management and Support is an invaluable reference in the emergency department and beyond for staff needing to prepare for the rare, but inevitable, hospital major incidence response.

An acutely observed, evocative collection of short stories blending fiction, biography, and memoir--from a Booker-longlisted author. Evocative, sensual, and tender, these stories confront our reality culture and interrogate our relationship with iconic figures, coming to life at the boundary between reality and fiction. A woman emerging from mourning spends her savings on a fur coat, a coat she will wear to a dance that will change her life. A professor of cardiovascular physiology lingers on the cusp of consciousness as he waits for his new heart to be delivered, still beating, from another body--and is carried on a tidal wave of memories to an attic room half a century ago. Visiting Sylvia Plath's grave in Yorkshire, the author imagines a conversation with the poet, a fellow North American who settled in grey England. She reflects on the treasured photograph of Princess Diana she took as a teenager, one of a multitude taken during a life cut short. And at Charleston, Angelica Garnett, child of the Bloomsbury group, is overpowered by echoes of the past; by all the beloved ghosts that spring to life before her eyes. MacLeod's characters hover on the border of life and death, where memory is most vivid and the present most elusive. Moving from the London riots of 2011 to 1920s

Nova Scotia, from Oscar Wilde's grave to the Brighton Pier, these exquisitely formed stories capture the small tragedies and profound truths of existence.
