Learning Disability Nursing SAGE

'This book provides an essential resource for educators of clinical skills who want to utilise simulation based education to provide optimal learning opportunities for their students.' Andrew Bland, University of Huddersfield 'In this book, a team of experienced authors have put together a much needed text that takes an evidence-based, practical approach to skills development.' Lauren Mawson, University of Cumbria 'A really exciting new text.' Sarah Burden, Leeds Metropolitan University Practice educators and mentors are now expected to have the skills and techniques needed to implement a 'learning skills through simulation' programme into established curricula, yet using simulation to teach - while of huge importance - requires careful and time-consuming planning. This valuable resource takes away some of that burden by providing clear, ready-made activities and guidance from leading practitioners in a range of fields, which healthcare and practice educators and mentors can use to

enhance their teaching of all the essential and commonly-taught clinical and management skills and knowledge. Dedicated chapters, which all follow a defined step-by-step format, provide simulation scenarios, alongside facilitator guidance, which will help develop confidence in the teaching of key skills such as: - Drug administration - Conflict management - Infection control - Breaking bad news - Catheter and bowel care These scenarios and accompanying guidance can be used as a framework for teaching, promoting a greater understanding of the skill being taught, and providing a risk-free opportunity for the student to practice their clinical and managerial skills and judgement.

Clinical Skills SAGE

Today, an increasing number of healthcare professionals (including nurses, midwives and members of many allied professions) have to conduct the vital first stage in a patient's journey – taking a clinical history and conducting an effective physical examination. This book offers clear, practical guidance on the fundamentals of clinical examination for any practitioner who wishes to understand their patient's specific needs and to plan appropriate care. Recognising that readers will come from a diverse range of clinical backgrounds and roles, the opening chapter (on consultation and the skills needed to take an

accurate clinical history) underpins the systems-based approach. This, combined with the use of case study examples, allows healthcare professionals to focus on the principles of examining the system or systems that are most relevant to their specific area of practice. The book also includes a helpful glossary and list of abbreviations. This new, updated edition contains revised chapters on genitourinary assessment, obstetric assessment and mental health assessment. There is also a completely new chapter on eye, ear, nose and throat assessment, covering the EENT conditions most commonly encountered in primary healthcare. Contents include: • Consultation and clinical history-taking skills • Respiratory assessment • Cardiovascular assessment • Gastrointestinal assessment • Neurological assessment • Genitourinary assessment • Musculoskeletal assessment • Obstetric assessment • Mental health assessment • Perioperative assessment • Eye, ear, nose and throat assessment

Supported by relevant theory, research, policy, and philosophy, this second edition of Psychiatric and Mental Health Nursing: The craft of caring provides a comprehensive overview of the practice of psychiatric and mental health nursing. The concept of "the craft of caring" dictates that the basis of good nursing practice is a combination of both art and science, encouraging nurses to take a holistic approach to the practice of psychiatric and mental health nursing. Reflecting current developments in nursing practice and the understanding of mental health disorders, this edition includes twelve additional chapters, placing more emphasis on specific groups such as children and young people, women, older people, asylum seekers, and refugees. Case studies include patients with anxiety, schizophrenia, and bipolar disorder as well as victims of sexual abuse, those with an eating disorder, homeless patients, and those with dementia and autism. The book also examines specialist services such as psychiatric liaison and spiritual care and includes discussion on psychiatric diagnosis and mental health legislation in relation to human rights. This is an essential text for all psychiatric and mental health nurses at the diploma and degree level, as well as qualified mental health nurses seeking to update their knowledge. It will also be a useful reference for professionals in

other disciplines such as social work, medicine, and psychology.

Clinical Skills: an introduction for nursing and healthcare covers the essential clinical skills required by nurses. It offers an ideal introduction to clinical skills for adult nursing students, and it will also be useful for student nurses in other fields of practice, for trainee nursing associates and for other healthcare students who need to carry out clinical procedures when caring for people in a healthcare environment. Written in an engaging and accessible style, the book will help students to: develop their proficiency in carrying out the nursing procedures required to qualify as a Registered Nurse understand when and how to provide nursing intervention and support to people in their care broaden and deepen their knowledge through the use of realistic scenarios apply their knowledge in a person-centred and compassionate way reflect on their own values and learning experiences to enhance their nursing practice improve their nursing skills by using the 'hints for practice' and 'alerts' The clear, reader-friendly presentation will help students develop the underpinning knowledge and understanding of the clinical skills they will need throughout their healthcare career. Pre-publication reviews "I found the chapters very accessible and easy to read which was refreshing as a lot of textbooks can be quite overwhelming in content and language." Former nursing student, Edge Hill University "It is very useful that all the procedures are broken down into steps. This gives the reader a clear guideline and good direction on where to begin." Former nursing student, University of Cumbria "This book is brilliant in so many ways... the step-by-step instruction were so useful and have really helped me to consolidate my learning. I will be recommending it to fellow students." Adult nursing student, University of East Anglia "The patient scenarios are one of my favourite aspects of the book, especially the continuity of particular case studies throughout the book. This is going to be an excellent addition to bookshelves and a fantastic reference." Newly Qualified Nurse, ex-Sheffield Hallam University

Learning Disability Nursing Practice McGraw-Hill Education (UK)

This text encapsulates not only the origins of nursing in the learning disability field but also contemporary perspectives and areas for specialist nursing practice. The book is divided into four sections: origins, perspectives, practice, and further perspectives. Section one (origins) describes Great Barr Colony and explores the conceptions of practice of actual attendants and nurses who worked there. It gives readers an in-depth focus on aspects of work and practice not accounted for in the literature to date. Section two (perspectives) explores social policy perspectives from the past eras of the workhouse, the colony and the hospital,

through to the present age of citizenship. Research in learning disability nursing practice is identified through scoping exercises to identify its current status. The section questions the research and practice developments that have come of age and that constitute a challenge within an evidence-based health and social care world. Section three (practice) identifies a wide range of specialist areas of nursing practice, including community learning disability nursing, epilepsy, forensics, health facilitation, autism, mental health, challenging behaviour, children's services and working with people with profound and multiple learning disabilities. Section four (further perspectives) addresses areas of contemporary and future concern, namely, educational curricula for nurses and the importance of inter-professional education and practice development.
