Coherence Solution • Bus-Snooping Protocols: (Not scalable) Used in bus-based systems where all the processors observe memory transactions and take proper action to invalidate or update the local cache content if needed. -Send all requests for data to all processors -Processors snoop to see if they have a copy and respond accordingly -Requires broadcast, since caching information ...Cache coherence protocol by sundararaman and nakshatraThe Second

Edition of The Cache Memory Book introduces systems designers to the concepts behind cache design. The book teaches the basic cache concepts and more exotic techniques. It leads readers through some of the most intricate protocols used in complex multiprocessor caches. Written in an accessible, informal style, this text demystifies ...The Cache Memory Book, Second Edition, Cache memory, also called CPU memory, is random access memory (RAM)

that a computer microprocessor can access more quickly than it can access regular RAM. This memory is typically integrated directly with the CPU chip or placed on a separate chip that has a separate bus interconnect with the CPU. Cache memory, also called CPU memory, is random access memory (RAM) that a computer microprocessor can access more quickly than it can access regular RAM. This memory is typically integrated directly with the CPU chip or placed on

a separate chip that has a separate bus interconnect with the CPU.
