This package for educators includes a looseleaf three-ring binder, a videotape, and a CD-ROM. The material is not meant as a linear history of this century's art, but rather as a guide to some of the Museum's exceptional works. It can be used on its own in the classroom or as

enhancement for a trip to the Museum. Each of 32 paintings is presented with a full-page reproduction, an essay, and strategies for discussion. The videotape contains a 10-minute exploration of one piece of installation art. The CD-ROM is an electronic version of the printed material. Though it may be a peripheral point, Georgia O'Keefe is the only woman whose work is represented.

Rebecca Harding Davis

was a prominent author of radical social fiction during the latter half of the nineteenth century. In stories that combine realism with sentimentalism, Davis confronted a wide range of contemporary American issues, giving voice to working women, prostitutes, wives seeking divorce, celibate utopians, and female authors. Davis broke down distinctions between the private and the public worlds, distinctions that trapped women in the ideology of domesticity. By engaging

current strategies in literary hermeneutics with a strong sense of historical radicalism in the Gilded Age, Jean Pfaelzer reads Davis through the public issues that she forcefully inscribed in her fiction. In this study, Davis's realistic narratives actively construct a coherent social work, not in a fictional vacuum but in direct engagement with the explosive movements of social change from the Civil War through the turn of the century.

With more than five hours of video instruction, the Digital Video Companion CD-ROM is the ideal study companion. The CD-ROM is based on three solid educational principles: Motivation, Instruction, and Evaluation. Instruction is at the core of the Digital Video Companion, so each section of McKeague's

texts are covered by a 5- to 10-minute video lesson. The problems worked during the video lesson are listed next to the viewing screen, so students can try working them in advance. A slider bar gives immediate access to any part of the video lesson. In order to help students evaluate their progress, each chapter of the Digital Video Companion contains a chapter text with answers. To further assist students, MathCue tutorial software is now integrated into the Digital

Video Companion.
MathCue Tutorial lets students practice with problems, then scores them and offers annotated, step-by-step solutions.

With landscapes there is no room for experimentation. Real changes to the landscape become an indelible part of it ; mostly for decades or even centuries. That is why level-headed and foresighted planning is required before final decisions are made.

Computer-based models allow the testing and visualization of development options and decision alternatives. For this reason virtual representation of landscape processes is gaining increasing importance in planning. The Thematic Synthesis Report V of the National Research Programme 48 "Landscapes and Habitats of the Alps" shows the potential of computer-based models and visualizations for spatial and landscape planning

and examines the current state of research. The models developed within NRP 48 deal with the most important issues in spatial and landscape planning in the Alps ; mechanisms and landscape changes through changing agricultural use patterns, tourism and intensive settlement development, and changes in the natural hazards potential due to global warming. Synthesis Report V throws light on chances and obstacles of models and visualizations in planning practice and

demonstrates how the formulation of use cases facilitates the development and improvement of computer-based models and the corresponding software for the world of practice.
