The first plain-paper office copier -- which was introduced in 1960 and has been called the most successful product ever marketed in America -- is unusual among major high-technology inventions in that its central process was conceived by a single person.

David Owen's fascinating narrative tells the story of the machine nobody thought we needed but now we can't live without. Chester Carlson grew up in unspeakable poverty, worked his way through junior college and the California Institute of Technology, and made his discovery in solitude in the depths of the Great Depression. He offered his big idea to two dozen major corporations -- among them IBM, RCA, and General Electric -- all of which turned him down. So persistent was this failure of capitalist vision that by the time the Xerox 914 was manufactured by an obscure photographic-supply company in Rochester, New York, Carlson's

original patent had expired. Xerography was so unusual and nonintuitive that it conceivably could have been overlooked entirely. Scientists who visited the drafty warehouses where the first machines were built sometimes doubted that Carlson's invention was even theoretically feasible. Drawing on interviews, Xerox company archives, and the private papers of the Carlson family, David Owen has woven together a fascinating and instructive story about persistence, courage, and technological innovation -- a story that has never before been fully told. *Flaunt* CNET Networks Inc. Through more than forty case studies,

nearly twenty interviews with experienced professionals, and a series of (nonscientific) surveys, *Flaunt* is a resource for design students as well as young, experienced, freelance, and independent designers. It explains how one can find a way to cohesively, succinctly and creatively showcase their work through an accessible, effective, and creative portfolio. *Flaunt* showcases a variety of alternatives through a selection of portfolios that represent both the most common approaches as well as some offbeat executions. Hopefully, this book will help ease the anxiety and burden of creating a portfolio and, perhaps, even help demystify

the process of putting it together, along with the expectations of presenting it.

Successfully scrape data from any website with the power of Python

About This Book A hands-on guide to web scraping with real-life problems and solutions

Techniques to download and extract data from complex websites

Create a number of different web scrapers to extract information

Who This Book Is For This book is aimed at developers who want to use web scraping for legitimate purposes.

Prior programming experience with Python would be useful but not essential. Anyone with general knowledge of

programming languages should be able to pick up the book and understand the principals involved.

What You Will Learn

- Extract data from web pages with simple Python programming
- Build a threaded crawler to process web pages in parallel
- Follow links to crawl a website
- Download cache to reduce bandwidth
- Use multiple threads and processes to scrape faster
- Learn how to parse JavaScript-dependent websites
- Interact with forms and sessions
- Solve CAPTCHAs on protected web pages
- Discover how to track the state of a crawl
- In Detail The Internet contains the most useful set of data ever assembled, largely publicly accessible for free. However, this

data is not easily reusable. It is embedded within the structure and style of websites and needs to be carefully extracted to be useful. Web scraping is becoming increasingly useful as a means to easily gather and make sense of the plethora of information available online. Using a simple language like Python, you can crawl the information out of complex websites using simple programming. This book is the ultimate guide to using Python to scrape data from websites. In the early chapters it covers how to extract data from static web pages and how to use caching to manage the load on servers. After the basics we'll get our hands dirty with building a more

sophisticated crawler with threads and more advanced topics. Learn step-by-step how to use Ajax URLs, employ the Firebug extension for monitoring, and indirectly scrape data. Discover more scraping nitty-gritties such as using the browser renderer, managing cookies, how to submit forms to extract data from complex websites protected by CAPTCHA, and so on. The book wraps up with how to create high-level scrapers with Scrapy libraries and implement what has been learned to real websites. Style and approach This book is a hands-on guide with real-life examples and solutions starting simple and then progressively becoming more complex. Each chapter

in this book introduces a problem and then provides one or more possible solutions.

 The Hitchhiker's Guide to the Galaxy meets the joy and glamour of Eurovision in bestselling author Catherynne M. Valente's science fiction spectacle, where sentient races compete for glory in a galactic musical contest...and the stakes are as high as the fate of planet Earth. A century ago, the Sentience Wars tore the galaxy apart and nearly ended the entire concept of intelligent space-faring life. In the aftermath, a curious tradition was invented—something to cheer up everyone who was left and bring the shattered worlds together in the spirit of peace, unity, and understanding. Once every cycle, the great galactic civilizations

gather for the Metagalactic Grand Prix—part gladiatorial contest, part beauty pageant, part concert extravaganza, and part continuation of the wars of the past. Species far and wide compete in feats of song, dance and/or whatever facsimile of these can be performed by various creatures who may or may not possess, in the traditional sense, feet, mouths, larynxes, or faces. And if a new species should wish to be counted among the high and the mighty, if a new planet has produced some savage group of animals, machines, or algae that claim to be, against all odds, sentient? Well, then they will have to compete. And if they fail? Sudden

extermination for their entire species. This year, though, humankind has discovered the enormous universe. And while they expected to discover a grand drama of diplomacy, gunships, wormholes, and stoic councils of aliens, they have instead found glitter, lipstick, and electric guitars. Mankind will not get to fight for its destiny—they must sing. Decibel Jones and the Absolute Zeroes have been chosen to represent their planet on the greatest stage in the galaxy. And the fate of Earth lies in their ability to rock.
