 Scepticism, a philosophical tradition that casts doubt on our
 ability to gain knowledge of the world and suggests suspending
 judgement in the face of uncertainty, has been influential since its
 beginnings in ancient Greece. Harald Thorsrud provides an
 engaging, rigorous introduction to the arguments, central themes
 and general concerns of ancient Scepticism, from its beginnings
 with Pyrrho of Elis (c.360-c.270 BCE) to the writings of Sextus
 Empiricus in the second century CE. Thorsrud explores the
 differences among Sceptics and examines in particular the

separation of the Scepticism of Pyrrho from its later form -
 Academic Scepticism - which arose when its ideas were
 introduced into Plato's "Academy" in the third century BCE. He
 also unravels the prolonged controversy that developed between
 Academic Scepticism and Stoicism, the prevailing dogmatism of
 the day. Steering an even course through the many differences of
 scholarly opinion surrounding Scepticism, Thorsrud provides a
 balanced appraisal of its enduring significance by showing why it
 remains so philosophically interesting and how ancient
 interpretations differ from modern ones.

Big Ideas from Ancient Greece offers a short introduction to the
 world of ancient Greek philosophy from the perspective of a
 contemporary theologian. Ancient Greece is widely regarded as
 the birthplace of Western philosophy. Many of the ideas
 expounded by the philosophers of that day went on to shape
 modern scientific and philosophical thought — everything from
 atomic theory to speculations about the afterlife. In this insightful
 look at twelve of the most important figures from antiquity,

British philosopher-theologian Steven Colborne sizes up Socrates and analyses Aristotle, offering a contemporary perspective on some of the most amazing philosophical ideas of all time. The book explores fascinating questions such as: Is everything made of water? Do ideas exist in reality? What are God's attributes? Can we really know anything? Whether you're a seasoned philosopher or just a curious amateur, you'll be gripped by Colborne's profound yet accessible reflections. *Big Ideas from Ancient Greece* is destined to become a textbook introduction to the enduringly fascinating world of ancient Greek thought.

This unparalleled comparative study of early Eastern and Western philosophy challenges every existing belief about the philosophical foundations of Western civilization. Spanning thirty years of intense intellectual inquiry and research, the author proves what many scholars before him have sensed but couldn't empirically explain: that the seemingly autonomous and separate metaphysical schemes of Greek and Indian cultures have mutually influenced each other over a long period of time, to the point that today's Western world must be considered the product of both Eastern and Western thought. The author's groundbreaking research systematically unveils striking similarities between the early metaphysical ideas central to Eastern and Western philosophies. Thomas McEvilley explores the key philosophical paradigms of these cultures, such as monism, the doctrine of reincarnation in India and Egypt, and early pluralism in Greece and India, to show how trade, imperialism, and migration currents have allowed these ideas to circulate and intermingle freely throughout India, Greece, and the Near East. This sweeping inter-disciplinary study will captivate students and scholars of philosophy, cultural studies, and classics, who will find that their field has been put on an entirely new footing.

This book examines the birth of the scientific understanding of motion. It investigates which logical tools and methodological principles had to be in place to give a consistent account of motion, and which mathematical notions were introduced to gain control over conceptual problems of motion. It shows how the idea of motion raised two fundamental problems in the 5th and 4th century BCE: bringing together being and non-being, and bringing together time and space. The first problem leads to the exclusion of motion from the realm of rational investigation in Parmenides, the second to Zeno's paradoxes of motion. Methodological and logical developments reacting to these puzzles are shown to be present implicitly in the atomists, and explicitly in Plato who also employs mathematical structures to make motion intelligible. With Aristotle we finally see the first outline of the fundamental framework with which we conceptualise motion today.

Universe and Inner Self in Early Indian and Early Greek Thought Allworth

Hermann Hesse, the author, has narrated a lot about Siddhartha and his spiritual journey. A lot has been discussed about Siddhartha. He is loved by everyone. He is a source of joy for everybody, but he, Siddhartha, is not a source of joy for himself, he finds no delight in himself. Siddhartha has started to nurse discontent in himself, he has started to feel that the love of his father and his mother, and love of his friend, will not bring him

joy forever and ever, will not nurse him, freed him, satisfy him. Siddhartha has many queries in his mind like as, "Do the sacrifices give a happy fortune?", "What about the Gods?", "Was it really Prajapati who had created the world?" "Was it not the "Atman", the singular one?" Siddhartha meets his father and says, "With your permission, my father, I have come to tell you that it is my longing to leave your house tomorrow and go to ascetics. My desire is to become a Samara." His father says-"You will go into the go forest and be a Samara , when you will find blissfulness in the forest, come back and teach me to be blissful." This is just an excerpt, the whole book consists of spiritualistic way of narration, thus becomes interesting one. Once you start reading can't resist to leave the book in the mid.

A contemporary reimagining of the Daphne and Apollo myth, *The Latinist* is a page-turning exploration of power, ambition, and the intertwining of love and obsession. Tessa Templeton has thrived at Oxford University under the tutelage and praise of esteemed classics professor Christopher Eccles. And now, his support is the one thing she can rely on: her job search has yielded nothing, and her devotion to her work has just cost her her boyfriend, Ben. Yet shortly before her thesis defense, Tessa learns that Chris has sabotaged her career—and realizes their relationship is not at all what she believed. Driven by what he mistakes as love for Tessa, Chris has ensured that no other institution will offer her a position, keeping her at Oxford with him. His tactics grow more invasive as he determines to prove he has her best interests at heart. Meanwhile, Tessa scrambles to undo the damage—and in the process makes a startling discovery about an obscure second-century Latin poet that could launch her into academic stardom, finally freeing her from Chris's influence. A contemporary reimagining of the Daphne and Apollo myth, *The Latinist* is a page-turning exploration of power, ambition, and the intertwining of love and obsession.

Uses textual and archaeological evidence to argue that emerging Egyptian and Greek architectural technologies were crucial to the origins and development of Greek philosophy. *Anaximander and the Architects* opens a previously unexplored avenue into Presocratic philosophy—the technology of monumental architecture. The evidence, coming directly from sixth century B.C.E. building sites and bypassing Aristotle, shows how the architects and their projects supplied their Ionian communities with a sprouting vision of natural order governed by structural laws. Their technological innovations and design techniques formed the core of an experimental science and promoted a rational, not mythopoetical, discourse central to our understanding of the context in which early Greek philosophy emerged. *Anaximander's prose book* and his rationalizing mentality are illuminated in surprising ways by appeal to the ongoing, extraordinary projects of the archaic architects and their practical techniques. Robert Hahn is Associate Professor of Philosophy at Southern Illinois University at Carbondale. He is the author of *Formal Deductive Logic*, Fifth Edition; *Conduct and Constraints: Testing the Limits of the 'Harm Principle';* and *Kant's Newtonian Revolution in Philosophy*.

First published in 1939. This book consists chiefly of extracts from Chuang Tzu, Mencius and Han Fei Tzu. Chuang Tzu's appeal is to the imagination; the appeal of Mencius is to the moral feelings; realism, as expounded by Han Fei Tzu, finds a close parallel in modern Totalitarianism and as a result these extracts from a book of the third century B.C. nonetheless have a very contemporary connection.

Focusing on texts by Homer, Herodotus, Thucydides, Plato, and Aristotle, among others, they examine perennial issues, including rights and virtues, democracy and the rule of law, community formation and maintenance, and the ways in which theorizing of several genres can and cannot assist political practice.

Marie-Claire Beaulieu unifies the multifarious representations of the sea and sea crossings in Greek myth and imagery by positing the sea as a cosmological boundary between the mortal world, the underworld, and the realms of the immortal. Through six in-depth case studies, she shows how, more than a simple physical boundary, the sea represented the buffer zone between the imaginary and the real, the transitional space between the worlds of the living, the dead, and the gods.

An exploration of how the Greeks reacted to and interacted with India from the third to first centuries BCE When the Greeks and Macedonians in Alexander's army reached India in 326 BCE, they entered a new world. The plants were unrecognizable, the customs of the people various and puzzling. Alexander's conquest ended with his death in 323 BCE, but the Greeks would settle in the Indian region for the next two centuries. From observations about botany and mythology to social customs, The Greek Experience of India explores how the Greeks reacted to and constructed life in India during this period. Richard Stoneman offers a valuable look at Megasthenes, ambassador of the King Seleucus to Chandragupta Maurya, and provides a discussion of Megasthenes' now-fragmentary book Indica. Stoneman considers the art, literature, and philosophy of the Indo-Greek kingdom and how cultural influences crossed in both directions. The Greek Experience of India is a masterful account of the encounters between two remarkable civilizations.

The definitive social history of tuberculosis, from its origins as a haunting mystery to its modern reemergence that now threatens populations around the world. It killed novelist George Orwell, Eleanor Roosevelt, and millions of others – rich and poor. Desmond Tutu, Amitabh Bachchan, and Nelson Mandela survived it, just. For centuries, tuberculosis has ravaged cities and plagued the human body. In Phantom Plague, Vidya Krishnan, traces the history of tuberculosis from the slums of 19th-century New York to modern Mumbai. In a narrative spanning century, Krishnan shows how superstition and folk-remedies, made way for scientific understanding of TB, such that it was controlled and cured in the West. The cure was never available to black and brown nations. And the tuberculosis bacillus showed a remarkable ability to adapt – so that at the very moment it could have been extinguished as a threat to humanity, it found a way back, aided by authoritarian government, toxic kindness of philanthropists, science denialism and medical apartheid. Krishnan's original reporting paints a granular portrait of the post-antibiotic era as a new, aggressive, drug resistant strain of TB takes over. Phantom Plague is an urgent, riveting and fascinating narrative that deftly exposes the weakest links in our battle against this ancient foe.
