MCCANN HAILIE

THE SECOND REPORT ON THE STATE OF THE WORLD'S ANIMAL GENETIC RESOURCES FOR FOOD AND AGRICULTURE Frontiers Media SA

This book highlights recent efforts to sustain agricultural productivity in Tunisia under a stressed environment and aridity conditions. This book's authors gathered a unique set of applications and approaches, including techniques applied to increase yield and preserve the environment, such as organic farming and using biochar amendment and its effects on soils' physicochemical properties. This book also presents water resources management and water management practices for sustainable soil production, diagnosis, and new farming technologies to enhance water-use efficiency. The book also addresses current livestock strategies intended to maintain production sustainability, increase fish productivity, and initiatives for sustainable tourism development. Given its scope, the book offers a valuable guide for policy planners, decision-makers, stakeholders,

researchers, and graduate students in Tunisia and neighboring countries with similarly stressed environmental conditions.

Fractures and resilience of agri-food value chains in the context of COVID-19: A review of recent evidence OECD Publishing

This book presents the advantages of the circular economy as a powerful - and inevitable - model for tackling the current challenges against shrinking resources and establishing the resource efficient economy. The experienced contributors present the status and strategies of circular economy implementation in several countries with hands on experience to protect the environment while promoting the circular economy through legislative requirements, best practices adopted and popularizing the idea of circulation of resources amongst the researchers & academia, policy makers, industry, and the general public at large. The book advocates model that consists of designing products and processes with a view to endlessly recycling them evolving a greater scope of sustainable development.

Laboratory Animals International Food Policy Research Insitute

Boosting intra-African trade and deepening regional integration offer an effective vehicle to speed up Africa's economic transformation. Increasing the volumes of intra-African trade in agricultural products and the elimination of non-tariff barriers have the potential to boost industrialization and enhance competitiveness, at country and industry levels, through higher investments in connectivity and infrastructure, both physical and digital.

Pathways for agrifood systems transformation and regional cooperation in the Mediterranean Oxbow Books

The fourteenth joint edition of the OECD-FAO Agricultural Outlook provides market projections for major agricultural commodities, biofuels and fish, as well as a special feature on the prospects and challenges of agriculture and fisheries in the Middle East and North Africa.

Agricultural Cooperation CTA

This report presents the outcomes of the twenty-fourth session of the GFCM Scientific Advisory Committee on Fisheries. The Committee reviewed the work carried out during the 2022–2023 intersession, including in the context of the MedSea4Fish programme, and provided advice on the

status of priority stocks and ecosystems and on potential management measures addressing key fisheries and vulnerable species in the Mediterranean. At the regional level, the Committee provided advice on: i) European eel, red coral and common dolphinfish fisheries in the Mediterranean; ii) minimum conservation reference size for GFCM priority species, including deep-water red shrimp and European hake at the regional level as well as small pelagics in the Adriatic sea and round sardinella in the eastern Mediterranean; and iii) the socioeconomic impacts of a potential extension of bottom trawling limits. With regard to small-scale fisheries, the Committee supported the need to revise the monitoring framework of the Regional Plan of Action for small-scale fisheries in the Mediterranean and the Black Sea. It discussed additional work in support of the GFCM, endorsing dedicated research programmes, including on recreational fisheries and on jellyfish in the Alboran Sea, as well as a draft regional plan of action to monitor and mitigate interactions between fisheries and vulnerable species in the Mediterranean and the Black Sea and identified further actions towards the implementation of standardized monitoring plans for fisheries restricted areas (FRAs) and the development of pilot studies to identify boundaries of known vulnerable marine ecosystems. It also discussed issues related to decarbonization and climate change, estimation of discards and fishing capacity. In line with the subregional approach, the Committee formulated advice on i) blackspot seabream in the western Mediterranean; ii) small pelagics in the Alboran Sea; iii) a FRA in the Cabliers Coral Mound Province; iv) Norway lobster, red mullet and striped red mullet in the central Mediterranean; v) round sardinella, small-scale fisheries and non-indigenous species in the eastern Mediterranean; and vi) small pelagics and key demersal stocks in the Adriatic Sea. Finally, the Committee agreed upon its workplan for 2023-2025.

Report of the twenty-fourth session of the Scientific Advisory Committee on Fisheries, FAO headquarters, Rome, Italy, 20-23 June 2023 Food & Agriculture Org.

Agricultural waste can be a source of energy, fertilizer, and other inputs at farm and industrial levels. Handling and managing agricultural waste are challenging tasks worldwide, especially in the context of environmental pollution control and sustainable agriculture. Thus, efficient management in terms of reuse, recycling, and reduction of agricultural waste is principally needed not only for the green economy but also for farmers' profitability. *Agricultural Waste - New Insights* provides an understanding of agricultural waste production and management, discussing crop residue, biodegradables, biomass, composting and vermiculture, agricultural waste economics, air pollution, environmental safety, waste management and handling, on-farm waste reuse, and agricultural waste value addition. It provides key aspects of emerging technologies and their applications in the domain of agriculture waste management.

National Water Security World Bank Publications

Animal genetic resource diversity underpins the supply livestock products and services across a wide range of production environments. It promotes resilience and serves as a basis for adapting livestock management to changing conditions. It is vital to livelihoods of many of the world's poor people. It can contribute to the delivery of ecosystem services such as landscape management and the maintenance of wildlife habitats. However, it is often undervalued, underused and under threat. This report updates the global assessment provided in the first report on *The State of the World's Animal Genetic Resources for Food and Agriculture*, published in 2007. It focuses particularly on changes that have occurred during the period since the first report was published. It serves as a basis for a review, and potential update, of the Global Plan of Action for Animal Genetic Resources, which since 2007 has provided an agreed international framework for the management of livestock biodiversity. Drawing on 129 country reports, it presents an analysis of the state of livestock diversity, the influence of livestock-sector trends on the management of animal genetic resources, the state of capacity to manage animal genetic resources, including legal and policy frameworks, and the state of the art in tools and methods for characterization, valuation, use, development and conservation.

The 1965 Africa and West Asia Agricultural Situation CABI

This volume is the outcome of collaborative European research among archaeologists, archaeobotanists, ethnographers, historians and agronomists, and frequently uses experiments in archaeology. It aims to establish new common ground for integrating different approaches and for

viewing agriculture from the standpoint of the human actors involved. Each chapter provides an interdisciplinary overview of the skills used and the social context of the pursuit of agriculture, highlighting examples of tools, technologies and processes from land clearance to cereal processing and food preparation. This is the second of three volumes in the *EARTH* monograph series, *The dynamics of non-industrial agriculture: 8,000 years of resilience and innovation*, which shows the great variety of agricultural practices in human terms, in their social, political, cultural and legal contexts.

Foreign Agricultural Trade of the United States Food & Agriculture Org.

The *Agricultural Outlook 2018-2027* is a collaborative effort of the OECD and FAO prepared with input from the experts of their member governments and from specialist commodity organisations. It provides a consensus assessment of the medium term (ten year) prospects for agricultural and fish commodity markets at national, regional and global levels. This year's edition contains a special focus on the agriculture and fish sectors of the Middle East and North Africa (MENA) region. **Development Centre Studies Regional Integration and Internal Reforms in the Mediterranean Area** ICARDA

Animal Influenza, Second Edition is a comprehensive text on animal influenza. Organized by species, coverage includes avian, swine, equine and mammals, with each section including data on influenza viruses, the infection and disease they cause, and strategies used in control. Covers the full range of topics within avian, swine, equine and mammalian influenzas in one comprehensive and authoritative text Provides a summarization of peer-reviewed and empirical data on influenza viruses, the infection, and diseases they cause Discusses strategies used in control of the disease Leading experts are drawn together to provide an international and multi-disciplinary perspective Fuses latest developments in basic scientific research with practical guidance on management of the disease

Laboratory Animals: Regulations and Recommendations for Global Collaborative Research is the only publication to offer a compilation of standards across the world in the care, welfare and use of animals in research. Timely in the new legislation in numerous regions of the world, this book provides the information in easily accessible, readable language. For professionals across laboratory animal science and biomedical research, *Laboratory Animals: Regulations and Recommendations for Global Collaborative Research* provides a broad picture of the regulations required in other areas of the world and is essential to appropriately manage animal care and use programs. - Offers a worldwide view and global compilation of regulations, guidelines and recommendations for laboratory animal research - Saves valuable time researching different regional legislation and regulations - Provides insight into factors that play roles in the regulatory framework for countries and geographic regions - Written in "layman's" terms to easily understand legislation and regulations

Explaining and Exploring Diversity in Agricultural Technology CIFOR

Foreign Agriculture Springer

This book covers a broad spectrum of topics related to GMOs and allied new gene-based technologies, biodiversity, and ecosystem processes, bringing together the contributions of researchers and regulators from around the world. The aim is to offer a clear view of the benefits and effects of genetically modified crops, insects, and other animals on the soil microbiome and ecological processes. Contributors examine issues related to the development of risk assessment procedures and regulations designed to maximize benefits while minimizing risks. Beyond the scientific challenges of GMOs, the book explores the broad and contentious terrain of ethical considerations. The contributors discuss such questions as the unintended, possibly unforeseen, consequences of releasing GMOs into ecosystems, and the likelihood that the full effects of GMOs could take years, even decades, of close monitoring to become evident. The importance of developing a precautionary approach is stressed. The final chapter describes the critical issues of governance and regulation of new and emerging gene-based technologies, as nations grapple with the consequences of adopting the Cartagena Protocol on Biosafety (CPB). The volume includes an extensive Annex which outlines legal perspectives on the state of GMO governance around the

world, with more than 20 examples from nations in Africa, South and Central America, Asia, Australasia, and Europe.

Animal Influenza BoD - Books on Demand

This book shows how the change of water paradigm has become urgent, and provides evidence for new policies that expand water balance to green and virtual water. The issue of water security concerns drinking water supply but also food safety, linked to agricultural policy. Both rain-fed and irrigated agriculture play complementary roles in food security, and the water issue implies a holistic view of water resources. This view constitutes the book's backstory. The reader will find original ideas that can be applied everywhere because the example of Tunisia is typically a basis to illustrate a universally prevalent situation. The book deals with other important issues: desalination, wastewater recycling, water quality, groundwater overdraft, water savings, governance, knowledge valuing, education, information: upgrading the whole water systems for the future implies emancipation of the whole society.

Agricultural Research Springer Nature

Sustainable agrifood systems are crucial for achieving the Sustainable Development Goals (SDGs) by 2030, yet structural inequalities and recent crises underscore the urgent need for transformative change. This report focuses on the Mediterranean region, examining challenges and opportunities for agrifood systems transformation within its unique socio-economic and political context. Drawing on global and regional momentum, the report identifies barriers hindering transformation, proposes policy recommendations, and highlights opportunities for regional cooperation. It leverages insights from the UN Food Systems Summits and a typological approach to categorize countries based on their agrifood systems and economic development status. The analysis reveals diverse challenges but also positive attributes such as dietary traditions and biodiversity. While most initiatives prioritize defining goals and establishing support ecosystems, there's a need for greater policy coherence and governance mechanisms. The report identifies strategies to address these gaps, including providing policy guidance, expanding collaborative networks, enhancing data management, and unlocking sustainable finance. Ultimately, an integrated approach that harmonizes various agrifood systems, aligns with local realities, and strengthens partnerships is essential for transformative change. By leveraging existing initiatives, expanding collaboration, and addressing unique regional challenges, the report charts a united pathway towards sustainable agrifood systems in the Mediterranean, fostering prosperity and resilience.

The 1965 Western Hemisphere Agricultural Situation Springer Nature

Written by some of the world's leading goat meat scientists, and drawing from the most recent publications in the field, this book comprehensively covers the most important areas of goat meat production. Chapters discuss the role of genetics, breeding, reproduction, and nutrition in producing good quality, profitable goat meat. The mineral, amino acid and fatty acid composition of goat meat is also addressed, along with a discussion of its nutritive value, aimed at highlighting its health benefits over other red meats.

GMOs OECD Publishing

The authors of this study highlight the opportunities trade liberalisation agreements offer for supporting reforms to encourage industrial restructuring through financial transfers, providing incentives for producers to diversify, and securing new markets.

Agriculture, Rural Development, and Related Agencies Appropriations for 1992 Food & Agriculture Org.

This publication i) illustrates how costs and benefits of energy interventions including their impacts along the agrifood value chain can be measured at country level, ii) applies the analysis to 11 country case studies, iii) identifies barriers, possible solutions, business models and success factors for the adoption of energy technologies, and iv) draws general recommendations for investors and decision makers. This report summarizes the analysis and main findings stemming from the FAO project "Investing in Energy Sustainable Technologies for the Agrifood Sector" (INVESTA). FAO has been working together with GIZ and partners of the international initiative Powering Agriculture: An Energy Grand Challenge for Development (PAEGC) since 2014. PAEGC, also partnered by the German Federal Ministry for Economic Cooperation and Development (BMZ), supports the development and deployment of clean energy innovations that increase agriculture productivity and stimulate low carbon economic growth in the agriculture sector of developing countries to help end extreme poverty and extreme hunger.
