Building a Garage is a practical, step-by-step guide which covers all aspects of the build from the planning and design stage through to construction and completion. Whether you would like to build a garage yourself or employ a builder, whether you want to construct a double or a single garage, whether you wish to build with bricks or wood, and whether you require a garage just to house your car or also to provide storage and workshop facilities, this is the book for you. Covers the various types of garage that can be constructed including those made from bricks and blocks, pre-cast concrete slabs, and softwood and hardwood timber, examines planning permission, building regulations, obtaining quotations, finding a builder, hiring plant and equipment, risk assessment, safety, insurance, how to obtain professional advice, site preparation and waste disposal. The author pays particular attention to building the foundations and constructing a solid base which are essential for all types of garages, and discusses all other aspects of construction, including the damp course, drainage, ventilation, the walls, lintels, joists, the door and window frames, all the different kinds of roofs and the installation of garage doors, including those operated by remote control. Separate chapters consider oak-frame garages, inspection pits and different types of driveway. Superbly illustrated with 180 colour photographs and diagrams and with a helpful list of key points at each chapter end.

### *How to Build Safer Houses with Confined Masonry* John Wiley & Sons

Brickwork for Apprentices has been the established reference on brickwork for generations of bricklayers. Continuously in print since 1944, John Hodge's classic text has now been fully revised in its fifth edition by Malcolm Thorpe – who acted as a CITB Advisor and was involved in the draughting of the Intermediate Construction Award syllabus (bricklaying route) – to cover the brickwork craft-related units of the latest Construction Awards and related Trowel Occupations NVQs from CITB / City & Guilds at Levels 2 and 3. The fifth edition incorporates extended coverage on the relatively new area of thin joint systems, to match the latest industry-based requirements and technical developments in the field. Content has been brought fully in line with recent changes to the Building Regulations, ensuring that this text will remain an essential reference for qualified bricklayers and other professionals working in the construction industry, as well as NVQ students new to the industry and wishing to embark on a career in bricklaying. A new feature in this edition is the inclusion of multiple choice questions at the back of the book, matched to the current NVQ requirements, to provide students of the CITB / City & Guilds Trowel Occupations NVQs with essential practice and revision for exam preparation.

*Masonry and Plastering* CRC Press

The appearance of brick and stone masonry owes as much to the character of the mortar joints as to the stone and bricks themselves. Unsuitable repointing can affect not only the look but also the durability of masonry, and is amongst the most frequent causes of damage to the character and fabric of historic buildings. The comprehensive repointing of a building is rarely necessary. Generally only those parts that are most exposed to the weather or are affected by specific problems such as leaking rainwater pipes or gutters are likely to be in need of attention. Sound historic mortar should be left undisturbed as it can be an important part of the character and significance of a building. This guidance, aimed at homeowners and non-specialist building professionals, provides a brief technical guide to the key issues and stages that need to be considered when repointing brick or stone walls of older buildings.
