 The Kalevala, or runic, songs is a tradition at least a few thousand years old. It was shared by Finns, Estonians and other speakers of smaller Baltic-Finnic languages inhabiting the eastern side of the Baltic Sea in North-Eastern Europe. This book offers a combined perspective of a musicologist and a linguist to the structure of the runic songs. Archival recordings of the songs originating mostly from the first half of the 20th century were used as source material for this study. The results reveal a complex interaction between three different processes participating in singing: speech prosody, metre, and musical rhythm.

What do all human languages have in common and in what ways are they different? How can language be used to trace different peoples and their past? Are certain languages similar because of common descent or language contact? Assuming no prior knowledge of linguistics, this textbook introduces readers to the rich diversity of human languages, familiarizing students with the variety and typology of languages around the world. Linguistic terms and concepts are explained, in the text and in the glossary, and illustrated with simple, accessible examples. Eighteen language maps and numerous language family charts enable students to place a language geographically or genealogically. A supporting website includes additional language maps and sound recordings that can be used to illustrate the peculiarities of the sound systems of various languages. 'Test yourself' questions throughout the book make it easier for students to analyze data from unfamiliar languages.
