technology. The Garmin Nuvi Pocket Guide There has not been conducted much research in religious studies and (linguistic) anthropology analysing Protestant missionary linguistic translations. Contemporary Protestant missionary linguists employ grammars, dictionaries, literacy campaigns, and translations of the Bible (in particular the New Testament) in

order to convert local cultures. The North American institutions SIL and Wycliffe Bible Translators (WBT) are one of the greatest scientific-evangelical missionary enterprises in the world. The ultimate objective is to translate the Bible to every language. The author has undertaken systematic research, employing comparative linguistic methodology and field interviews, for a history-of-

ideas/religions and epistemologies explanation of translated SIL missionary linguistic New Testaments and its premeditated impact upon religions, languages, sociopolitical institutions, and cultures. In addition to taking into account the history of missionary linguistics in America and theological principles of SIL/WBT, the author has examined the intended cultural transformative effects of

Bible translations upon cognitive and linguistic systems. A theoretical analytic model of conversion and translation has been put forward for comparative research of religion, ideology, and knowledge systems.

A consumer guide integrates shopping suggestions and handy user tips as it describes and rates dozens of digital electronic

products, including cell phones, digital cameras, televisions, computers, and home theater products.

PC Mag
Springer
Our intention in this collection is to provide, largely through original writings, an extended account of pi from the dawn of mathematical time to the present. The story of pi reflects the most seminal, the most serious, and sometimes

the most whimsical aspects of mathematics. A surprising amount of the most important mathematics and a significant number of the most important mathematicians have contributed to its unfolding directly or otherwise. Pi is one of the few mathematical concepts whose mention evokes a response of recognition and interest in those not concerned professionally

with the subject. It has been a part of human culture and the educated imagination for more than twenty-five hundred years. The computation of pi is virtually the only topic from the most ancient stratum of mathematics that is still of serious interest to modern mathematical research. To pursue this topic as it developed throughout the millennia is to follow a thread

through the history of mathematics that winds through geometry, analysis and special functions, numerical analysis, algebra, and number theory. It offers a subject that provides mathematicians with examples of many current mathematical techniques as well as a palpable sense of their historical development. Why a Source Book? Few books serve wider

potential audiences than does a source book. To our knowledge, there is at present no easy access to the bulk of the material we have collected.

The Politics of Missionary Scriptural Translations

 NATIONAL BESTSELLER •
 For anyone who wants to learn a foreign language, this is the method that will finally make the words stick.
 "A brilliant and

thoroughly modern guide to learning new languages.”—Gary Marcus, cognitive psychologist and author of the New York Times bestseller *Guitar Zero* At thirty years old, Gabriel Wyner speaks six languages fluently. He didn’t learn them in school—who does? Rather, he learned them in the past few years, working on his own and practicing on the subway, using simple techniques

and free online resources—and here he wants to show others what he’s discovered. Starting with pronunciation, you’ll learn how to rewire your ears and turn foreign sounds into familiar sounds. You’ll retrain your tongue to produce those sounds accurately, using tricks from opera singers and actors. Next, you’ll begin to tackle words, and connect sounds and spellings to imagery

rather than translations, which will enable you to think in a foreign language. And with the help of sophisticated spaced-repetition techniques, you’ll be able to memorize hundreds of words a month in minutes every day. This is brain hacking at its most exciting, taking what we know about neuroscience and linguistics and using it to create the most efficient and enjoyable

way to learn a foreign language in the spare minutes of your day.

There has been an exponential growth of personal GPS device sales over the last few years and Garmin is leading the way. In particular, the Garmin nüvi navigators have revolutionized what we expect from a GPS navigation device, or from any device for that matter. In this handy new Pocket Guide, mobile device expert Jason O'Grady

reveals the secrets to using these leading personal GPS devices, including the nuvi 350 which provides automatic routing, turn-by-turn voice directions, and touchscreen control--making it easy to find your way anywhere. In addition the built-in "Travel Kit" offers an MP3 player, an audio book player from Audible.com, a jpeg-format picture viewer, a world travel clock with

time zones, a currency converter, a measurement converter, and a calculator.

With this essential companion you'll be a Garmin GPS master in no time!

A guide to getting the most out of a GPS system provides information on such topics as building and hooking up data cables, modifying the iPAQ cradle, grabbing screenshots, and customizing GPS games.

All Terrain Vehicles Trails Guide
Funtreks Incorporated
This is the only comprehensive guide to mapping software that clearly explains how to interface your GPS receiver with your computer to create maps, annotate aerial photos, and even create 3-D maps. It includes where to find free software and maps, how to use aerial photos and satellite imagery, and how to view your favorite backcountry locations in 3-D. It brings sophisticated features once available only to professional cartographers within reach, at low cost or even free, to everyone who loves maps. Readers will discover how to make maps for free, download aerial photos, create and customize their own maps, use hidden tips and tricks, reduce the learning curve and get mapping right away, locate trailheads using a real-time moving map on a laptop or PDA, and how to best transfer information between a GPS, computer, and electronic

maps.

Great trails for UTVs and dirt bikes, too. [ATV Trails Guide](#) John Wiley & Sons

Structural Elements Design Manual is a manual on the practical design of structural elements that comprise a building structure, namely, timber, concrete, masonry, and steel. Practical guidance on the design of structural elements is provided in accordance with the appropriate British Standard or Code of Practice. Plenty of worked examples are included.

Comprised of five chapters, this book begins with an overview of interrelated matters with which the structural engineer is concerned in the design of a building or similar structure. The British Standards and Codes of Practice are also considered, along with loading, structural mechanics, and theory of bending. The discussion then turns to timber, concrete, masonry, and

steel elements, with emphasis on safety considerations and material properties. This monograph should prove useful not only to students of structural and civil engineering, but also to those studying for qualifications in architecture, building, and surveying who need to understand the design of structural elements.

Pi: A Source Book
This textbook provides an

introduction to digital forensics, a rapidly evolving field for solving crimes. Beginning with the basic concepts of computer forensics, each of the book's 21 chapters focuses on a particular forensic topic composed of two parts: background knowledge and hands-on experience through practice exercises. Each theoretical or background section concludes with a series of review questions, which are prepared to test students' understanding of the materials, while the practice exercises are intended to afford students the opportunity to apply the concepts introduced in the section on background knowledge. This experience-oriented textbook is meant to assist students in gaining a better understanding of digital forensics through hands-on practice in collecting and preserving digital evidence by completing various exercises. With 20 student-directed, inquiry-based practice exercises, students will better understand digital forensic concepts and learn digital forensic investigation techniques. This textbook is intended for upper undergraduat e and

graduate-level students who are taking digital-forensic related courses or working in digital forensics research. It can also be used by digital forensics practitioners, IT security analysts, and security engineers working in the IT security industry,

particular IT professionals responsible for digital investigation and incident handling or researchers working in these related fields as a reference book.

PC World

Describes 80 easy, moderate, and difficult trails, mostly convenient to

Denver and the Front Range. The trails are color-coded, with symbols showing the kinds of vehicles allowed, including unlicensed UTVs, ATVs and dirt bikes. Also includes mileage logs, aerial terrain views, GPS coordinates, and historical highlights.
