most educational psychology books, which take one theory at a time, explain its assumptions and principles and then identify implications for educational practice, *Essentials of Educational Psychology* focuses more on the commonalities than the differences among theories, because although researchers from different traditions have approached human cognition and behavior from many different angles, they sometimes arrive at more or less the same conclusions. This book integrates ideas from many theoretical perspectives into a set of principles and concrete strategies that psychology as a whole can offer you. See for Yourself exercises will help you discover more about yourself as a thinker and learner and also help you come to a deeper and more personal understanding of educational psychology's core ideas.  Classroom observation has become a tool for analysing and improving English Language Teaching (ELT). This book represents the state of the art in language education and classroom interaction research from a data-driven empirical perspective. The micro-analytic, multimodal, and videographic approaches represented here understand classrooms as sites of complex, naturally occurring interaction. The volume demonstrates that the investigation of this communicative setting is the basis for insights into the inner workings of classrooms and the development of strategies for teacher education. The introductory article complements the volume by giving a comprehensive overview of the theories and methods that have come to bear in classroom observation.

How Teachers Make a Difference Routledge
What do pupils actually do in school? There are remarkably few studies that take the pupils' perspective and reconstruct

experience from their point of view within the context of their own cultures and careers. This volume brings together a number of research studies on various aspects of how pupils cope with schools. The theoretical papers consider amongst other issues a developmental model of the growth of pupil strategies based on primary and secondary socialisation; a discussion of 'interactionist empiricism' which argues for co-ordinated research between micro and macro perspectives and an extended overview of the general sociological background of work on teacher and pupil strategies. The empirical articles consider a number of themes ranging from strategies employed in answering teacher questions to the power and influence of the pupil peer group in the development of attitudes and behaviour.

Reflections on Practice Macmillan International Higher Education

Some students enter classrooms with an "I dare you try to teach me" look on their faces, and others bounce into class excited to learn and anxious to please the teacher. We know we can't automatically blame teachers or schools when students don't want to learn. But we also know that sometimes teachers and schools don't always set students up for success, and they don't always help them love what they're learning. *Why Kids Love (and Hate) School: Reflections on Practice* investigates some of the school and classroom practices that help students love school—and some that send students in the opposite direction. Intended for classroom teachers, teacher education students, and school administrators, chapters in the book investigate a variety of topics: how schools can build effective school cultures, the "struggle" students encounter in learning, practices of other countries that help students love school, testing practices that cause students to hate school—and much more. Perfect for courses in: Introduction to Education, General Methods, Management/Assessment, Educational Research, Educational Administration/Leadership, Teacher Leadership, Curriculum Theory, Curriculum Development.
