Engine production for the typical car manufactured today is a study in mass production. Benefits in the manufacturing process for the manufacturer often run counter to the interests of the end user. What speeds up production and saves manufacturing costs results in an engine that is made to fall within a wide set of standards and specifications, often not optimized to meet the original design. In short, cheap and fast engine production results in a sloppy final product. Of course, this is not what enthusiasts want out of their engines. To maximize the performance of any engine, it must be balanced and blueprinted to the exact tolerances that the factory should have adhered to in the first place. Four cylinder, V-8, American or import, the performance of all engines is greatly improved by balancing and blueprinting. Dedicated enthusiasts and professional racers balance and blueprint their engines because the engines will produce more horsepower and torque, more efficiently use fuel, run cooler and last longer. In this book, expert engine builder and veteran author Mike Mavrigian explains and illustrates the most discriminating engine building techniques and perform detailed procedures, so the engine is perfectly balanced, matched, and optimized. Balancing and blueprinting is a time consuming and exacting process, but the investment in time pays off with superior performance. Through the process, you carefully measure, adjust, machine and fit each part together with precision tolerances, optimizing the design and maximizing performance. The book covers the block, crankshaft, connecting rods, pistons, cylinder heads, intake manifolds, camshaft, measuring tools and final assembly techniques. For more than 50 years, balancing and blueprinting has been an accepted and common practice for maxi

This book details all the differences between an internal combustion engine vehicle & an electric vehicle. It explains in plain & simple English how engines work, where the fuels come from, what the difference is between different battery chemistries & the difference is between different electric motor types along with how an electric vehicle actually works. With regard to electric cars & hybrids, what are the differences with the electric charging modes, the cables you need, the government grants & initiatives that are available & finally what sort of maintenance will be required with an electric vehicle. All costs are explained along with emission zones & what governmental policies are currently in place & those which are planned. Although written primarily for the UK, Europe, North America & Asia have also been included to allow this book to be relevant globally.

How difficult it can be to forgive others or to accept forgiveness or to accept that someone who had offended the community has been reconciled and accepted back into it. For two millennia Christians have pondered the scope of the forgiveness Jesus taught and lived. They have celebrated practices and rites that have enabled the faithful to forgive, to be forgiven, and to accept that God brings reconciliation even when we find it almost impossible

Multi-time author and well-regarded performance engine builder/designer John Baechtel has assembled the relevant mathematics and packaged it all together in a book designed for automotive enthusiasts. This book walks readers through the complete engine, showcasing the methodology required to define each specific parameter, and how to translate the engineering math to hard measurements reflected in various engine parts. Designing the engine to work as a system of related components is no small task, but the ease with which Baechtel escorts the reader through the process makes this book perfect for both the budding engine enthusiast and the professional builder.

The creator of Winnie-the-Pooh shares his musings on some of the matters of his day in this delightful collection of essays, short stories, and poems. Not That It Matters is “a collection of essays from the end of that extraordinary silver age of English belles-lettres at the turn of the last century, when men such as Shaw and Belloc earned their daily bread by scribbling in newspapers and magazines about anything they could scrape a thousand or so words out of: socialism, dogs, the weather, how they celebrated Christmas, capital punishment, Wagner. For those who like this sort of thing, this volume is very nearly perfect. There are pieces on snobbery, oranges, cricket, bad fiction, ‘Smoking as a Fine Art’ (‘My first introduction to Lady Nicotine was at the innocent age of eight’), chess, thermometers, Holy Writ (‘Isaiah was the ideal author. . . . He kept to one style’), and—prophetically—those bores who fetishize ‘good brown ale’” (National Review). “Milne writes on goldfish, daffodils, writing personal diaries, the charm of lunch, intellectual snobbery, and even what property program presenters would now call ‘kerb appeal’—but which was simply ‘looking at the outside of a house’ in Milne’s day. . . . It is still a delight and a joy to have Not That It Matters and its ilk waiting on my shelf.” —Stuck in a Book
