Examining a century of university history, Larry Cuban tackles the age-old question: What is more important, teaching or research? Using two departments (history and medicine) at Stanford University as a case study, Cuban shows how universities have organizationally and politically subordinated teaching to research for over one hundred years. He explains how university reforms, decade after decade, not only failed to dislodge

the primacy of research but actually served to strengthen it. He examines the academic work of research and teaching to determine how each has influenced university structures and processes, including curricular reform. Can the dilemma of scholars vs. teachers ever be fully reconciled? This fascinating historical journey is a must read for all university administrators, faculty, researchers, and anyone concerned with educational reform.

Veiligheidscultuur in een organisatie Human Rights Watch

Los PGSBC han tenido conceptual y prácticamente un desarrollo que los ha convertido, de ser solo una herramienta de observación y retroalimentación, a ser un componente de los sistemas de gestión con múltiples oportunidades de interactuar con el resto de los componentes de los sistemas, con una potencialidad de involucrar a la gerencia y de construir interacciones entre todos los actores de una organización que faciliten el perfeccionamiento de la cultura de la seguridad de las mismas. En esta obra se aborda el tema complejo, por su carácter esencialmente subjetivo, de la cultura de la seguridad, sus características, cómo medirla y transformarla, unida a la experiencia de algunos casos en los que los autores de la obra han participado y que son objeto de atención. Del mismo modo, se tratará el liderazgo hacia la seguridad.

Femininity, Masculinity, and Sexuality in Morocco and Hollywood Frontiers Media SA

In *City of Strangers*, Andrew M. Gardner explores the everyday experiences of workers from India who have migrated to the Kingdom of Bahrain. Like all the petroleum-rich states of the Persian Gulf, Bahrain hosts an extraordinarily large population of transmigrant laborers. Guest workers, who make up nearly half of the country's population, have long labored under a sponsorship system, the kafala, that organizes the flow of migrants from South Asia to the Gulf states and contractually links each laborer to a specific citizen or institution. In order to remain in Bahrain, the worker is almost entirely dependent on his sponsor's goodwill. The nature of this relationship, Gardner contends, often leads to exploitation and sometimes violence. Through extensive observation and interviews Gardner focuses on three groups in Bahrain: the unskilled Indian laborers who make up the most substantial portion of the foreign workforce on the island; the country's entrepreneurial and professional Indian middle class; and Bahraini state and citizenry. He contends that the social segregation and structural violence produced by Bahrain's kafala system result from a strategic arrangement by which the state insulates citizens from the global and neoliberal flows that, paradoxically, are central to the nation's intended path to the future. *City of Strangers* contributes significantly to our understanding of politics and society among the states of the Arabian Peninsula and of the migrant labor phenomenon that is an increasingly important aspect of globalization.

In this thoroughly revised and updated second edition of *Human Resources Management for Public and Nonprofit Organizations*, Joan E. Pynes--a respected authority in public administration--demonstrates how strategic human resources management is essential for proactively managing change in an environment of tighter budgets, competition from private organizations, the need to maintain and train a more diverse workforce, and job obsolescence brought about by shifts in technology. Complete with a free online instructor's manual, this new edition offers current compensation and budgetary guidance and helps practitioners navigate the newest legal and technological challenges and opportunities in human resource management.

Review of previous edition: "Trevor Kletz's book makes an invaluable contribution to the systematic, professional and scientific approach to accident investigation". The *Chemical Engineer* Fully revised and updated, the third edition of *Learning from Accidents* provides more information on accident investigation, including coverage of accidents involving liquefied gases, building collapse and other incidents that have occurred because faults were invisible (e.g. underground pipelines). By analysing accidents that have occurred Trevor Kletz shows how we can learn and thus be better able to prevent accidents happening again. Looking at a wide range of incidents, covering the process industries, nuclear industry and transportation, he analyses each accident in a practical and non-theoretical fashion and summarises each with a chain of events showing the prevention and mitigation which could have occurred at every stage. At all times *Learning from Accidents*, 3rd Edition emphasises cause and prevention rather than human interest or cleaning up the mess. Anyone involved in accident investigation and reporting of whatever sort and all those who work in industry, whether in design, operations or loss prevention will find this book full of invaluable guidance and advice.

This book is the first to formulate an ideology of emancipation for women in Morocco. Beginning with constructs of the body, femininity and masculinity, it analyzes the central role played by the sociopolitical writing of sexuality in creating gender hierarchy. The author focuses on Morocco, while drawing parallels with Hollywood cinema, one of the great producers of femininity and masculinity, and conducts an exhaustive examination of constructs of femininity and masculinity in language, social practices, cultural productions and legal texts. The objectives of this project are tripartite: it exposes the dynamics that devalue women's humanity; it charts the schemas of their sexual, economic and sociopolitical exploitation; and it advances concrete solutions for re-establishing women's human dignity.

This comprehensive report, published as part of the Football Players Health Study at Harvard University, more than two years in the making and 493 pages long, is an unprecedented step towards improving player health, concluding with several important recommendations. To date, there has been no analysis of the universe of stakeholders that may influence the health of NFL players, nor any systematic analysis of their existing or appropriate legal and/or ethical obligations. While clinical health care interventions are essential, player health also depends on understanding the wider context in which players work. The report examines 20 diverse stakeholders: NFL players, the NFL, the NFLPA, NFL club medical staff, second opinion, neutral and personal doctors, NFL clubs and personnel, NFL coaches, contract advisors, financial advisors, equipment managers and manufacturers, players' family members, officials, the media, NFL business partners, and fans. In total, the report makes 76 recommendations. Highlights of the key proposals are summarized below: * Conflicts of interest: The current arrangement under which a team's medical staff, including doctors and athletic trainers, have responsibility both to the players and to the club presents an inherent structural conflict of interest. A division of responsibilities between two distinct groups of medical professionals is needed to minimize such conflict and ensure that players receive medical care that is as unbiased and uninfluenced by competing interests as possible. Care and treatment should be provided by one set of medical professionals, called the "Players' Medical Staff," appointed by a joint committee with representation from both the NFL and NFLPA. The evaluation of players for business purposes should be conducted by a separate set of medical personnel, known as the "Club Evaluation Doctors." * Player health and adversarial collective bargaining: The NFL and NFLPA should refrain from making improvements to player health policies a "bargaining chip" in labor negotiations, to the extent that this is not already the case. Players should never be asked to trade their healthcare for other benefits in the collective bargaining process. * Ethical guidelines: Various stakeholders - including club doctors, athletic trainers, coaches, contract advisors, and financial advisors - should adopt, improve and enforce Codes of Ethics specific to the environment of the NFL.* Ongoing research into the health effects of the game: The NFL and NFLPA should continue to initiate and support efforts to scientifically and reliably identify the health risks and benefits of playing professional football. * Access to data: The NFL and, to the extent possible the NFLPA, should make aggregate, de-identified injury data publicly available for independent reanalysis. They should also continue to improve their robust collection of data and offer it to qualified professionals for analysis. * Meaningful penalties: The collective bargaining agreement (CBA) should be amended to impose meaningful fines for any club or person found to have violated Sections 1 through 6 of Article 39 of the 2011 CBA (players' rights to medical care and treatment). * Investing in players' health and care: The NFLPA should consider investing greater resources to investigate and enforce player health issues and enforce player rights, including Article 39 of the CBA. Published alongside the report are a list of the Top 10 Recommendations in the report (also included in the Executive Summary at the beginning of the report), and A Patient Bill of Rights for NFL Players - including current and proposed rights under the CBA, NFL policy, law and/or codes of ethics (which can be found on the Football Players Health Study at Harvard University website).

The Governance Revolution Staywell Company

Human Behavior in Hazardous Situations introduces a new generation within safety management, fully developed with neuropsychological insights, developed in collaboration with, and put to test by, the chemical and process industries. Until now, there has been little theoretical framework on how, and especially why, people behave the way they do in hazardous situations. Human Behavior in Hazardous Situations presents new theories, based on a human behavioral approach, to offer a fresh perspective on safety management. By way of case studies, practical tips and exercises, Dr Jan Daalmans demonstrates how this neuropsychological approach can be applied for those safety managers working in the Chemical, Process and Pharmaceutical industries. Presents new brain-based approaches to safety, with a historical perspective on the evolution of the safety management. Practical tips and guidance for those working in the chemical and process industries. Including exercises and case studies to demonstrate the practical application of techniques.

Mooring is one of the most complex and dangerous operations for ship and terminal crew. If something goes wrong, the consequences can be severe. Effective Mooring gives crew a general introduction to mooring and guidance on how to stay safe during mooring operations. It is written in an easy-to-understand style for seafarers worldwide and can be used as a training guide for both new and experienced crew. Produced by the Oil Companies International Marine Forum (OCIMF), the book is written for crew on board oil tankers, barges and terminals, but the principles can be applied to any vessel.
