 Common rail direct fuel injection is a direct fuel injection system for diesel engines.. It features a high-pressure (over 2,000 bar or 200 MPa or 29,000 psi) fuel rail feeding solenoid valves, as opposed to a low-pressure fuel pump feeding unit injectors (or pump nozzles).Third-generation common rail diesels now feature piezoelectric injectors for increased precision, with fuel pressures up ...Common rail - Wikipedia
 The ECU collects and processes signals from various on-board sensors. An ECU electronic module contains microprocessors, memory units, analog to digital converters and output interface units. Depending upon the parameters, a number of different maps can be stored in the onboard memory. This allows the ECU to be tailored to the specific engine and vehicle requirements, depending on the application.

 CRDI or common rail direct injection system is a method of injection of fuel into the engine cylinders of petrol and diesel engines. In the engines, a high pressure common rails used to inject the fuel in individual valves. In the modern generation engines this fuel injection system is used mostly because of technological advancement. In this method a common and single line is used to inject the ...

 Common rail direct fuel injection is a fuel system that is employed in most of the present diesel cars in the world. It is modified form of direct fuel injection system that is used in petrol and diesel engines. CRDI helps to improve the performance, power and reduce harmful emission from diesel engines.
