The use of complementary therapies is exploding, increasing the pressure to establish a rigorous science to support its practice. *Clinical Research in Complementary Therapies: Principles, Problems and Solutions* provides students with the tools they need to research complementary and integrative medicine (CIM) and so fill this gap. Essential for both undergraduate and postgraduate students, this second edition is significantly updated and enhanced. Part 1 deals with research strategies and methods, explaining the major types of clinical research in CIM and how these inter-relate. New chapters are included on whole systems research, qualitative research and questionnaire development. Not all therapies can be treated the same way nor channeled through the signal process of randomized controlled trials. Therefore, detailed description of mixed methods approaches including observational, qualitative, cost-benefit and comparative effectiveness research are described. Part 2 deals with specific complementary therapies and how they are investigated by experts in each field. The book analyses the key questions asked and the controversies debated in complementary medicine research and offers clear and innovative guidance for answering these questions. FEATURES • Provides an overarching synthesis of methods in CIM and how they are to be used collectively including the role of comparative effectiveness research • Suggests both general and specific factors which need to be considered in assessing or planning complementary therapy research • Pinpoints aspects of research which are different in orthodox research and complementary therapy research • Reviews the types of research carried out in specific complementary therapies and analyses issues which arise • Includes information on measuring the economic cost and benefits of complementary medicine, clinical audit and the role of placebos use • Builds upon recent research results, looks at the lessons these provide for all complementary therapies and suggests key issues to address in future research. • Provides an overarching synthesis of methods in CIM and how they are to be used collectively including the role of comparative effectiveness research • Suggests both general and specific factors which need to be considered in

Free Papers The Influence of Pancuronium on Primary Conjugated Bile Acids A. Fassoulaki, T. Mihos, A. Mihos and P. Kaniaris Experimental studies have been reported in which a prolonged action of steroid neuro muscular blocking agents followed bile acids administration(1, 2). A prolonged neuro muscular action of pancuronium has also been detected in patients with biliary obstruction(3). In the present study serum bile acids and intracellular liver enzymes were estimated after anaesthesia in which pancuronium was used as a muscle relaxant (Fig. 1). An attempt is made to investigate the effect of pancuronium on bile acid levels. Material and Methods Twelve female patients aged between 40 and 50 years were studied. All of them were visited in the ward the night before the operation by the anaesthesiologist where their clinical condition was assessed and their consent was obtained to participate in the present study. None of them had a history of hepatic disease or was taking drugs. The operation performed in all cases was modified radical mastectomy and intracellular liver enzymes are routinely determined in these patients preoperatively. The twelve patients were reassured and stated that they did not want to have any tranquillizer for premedication.

Philosophy should give the human being a mental basis that will allow man to lead a happy life and solve the problems of the now. Philosophy does not consist of making things complicated and

incomprehensible like today's degenerate philosophies do. In this book, no philosophical phrases are discussed in order to play mental soccer. This book gives basics about life, which one can apply to lead to a fulfilled, happy existence. Basic questions about life itself are solved. What is life? What is man? Is it that a creature arose from mud by chance as science tells you? Or is it that matter is motivated by a soul as the priest makes you believe. Why does man think the way he thinks? What is the goal of existence?

Unhappy with your face? Your body is trying to tell you something. Every line, wrinkle, spot, mole and crease means something. They did NOT just randomly show up on your face. Every part of your face is connected to an organ or body part. If that body part is not functioning properly, it will show up on your face. No amount of cream will change that. If you want to improve your face, you must improve your health. And lucky for you- your face tells you exactly what's wrong with you. Forget plastic surgery- you can do it yourself. After this event, you will never look at people the same way again. You will instantly be able to tell what issues they have. And they will wonder why you now look 20 years younger !
