The purpose of this paper is to propose a change with regards to fall risk prevention at the hospital system where the writer works. When a fall prevention program was initiated that encompassed the use of an assessment tool to rate the fall risk level that was used uniformly for all patients the number of falls dropped by 70% according to the previous year (Lara-Medrano, Alcalázar-Quinónes, Galarza-Delgado, and Baena-Trejo, 2014). The facility currently uses the concept of Every patient is a fall risk which isn't effective due to the fact that the statistics show they are above average for falls. The plan being presented discusses the use of the Johns Hopkins Fall Risk Assessment Tool along with additional interventions in order to categorize patients as; low, moderate or high fall risk and then assign the appropriate interventions to the level of fall risk. To implement the plan it will be shared using a PowerPoint with the caregivers during staff meetings so they are familiar with the changes. House supervisors and charge nurses will be super users and available each shift to help if any questions or issues arise. Finally the results will be disseminated back to everyone involved via reports shared at leadership meetings and managers will take it to their staff.

Practice based on evidence requires a fundamental change in the way that nurse leaders and staff think about practice and the practice environment. Evidence-based practice, or EBP, promotes improved interventions, care, and patient outcomes. Translating evidence-based findings into practice can be challenging. Using practical and clearly defined approaches, Johns Hopkins Nursing evidence-based Practice: Implementation and Translation provides a road map for instituting best practices.

With its new condensed format, completely reorganized and updated content, respected author team, and new lower price, Perry and Potter's Nursing Interventions and Clinical Skills, 5th Edition is your all-around best choice for learning the skills and techniques you'll use every day in practice. Covering 181 skills, this highly accessible manual conveniently groups all related skills together, so you can find information quickly. The companion Evolve website features 50 video clips, skills checklists, and much more, ensuring your successful mastery of each skill.

Contains 180 skills and techniques (basic, intermediate, and advanced) you'll use every day in practice. Presents every skill in a logical, consistent format: Assessment, Planning, Implementation, Evaluation -- improving the quality of patient care. Pairs each step with an appropriate rationale, helping you understand and remember why specific techniques are used. Features Safety Alerts that highlight unusual risks inherent in the next step of the skill, helping you plan ahead at each step of nursing care. Uses a Glove icon as a reminder to don clean gloves before proceeding to the next step of the skill, improving patient safety. Guides you in Delegation and Collaboration, explaining when to delegate a skill to assistive personnel, and indicating what key information must be shared. Highlights Special Considerations such as information unique to pediatric or

geriatric patients, to raise awareness of additional risks you may face when caring for a diverse patient population. Provides sample documentation of nurses notes so that you can learn to communicate effectively to the patient care team. Contains multimedia resources such as video clips, skills performance checklists, interactive exercises, and more, all easily available to you on the companion Evolve website at no additional cost. Content has been reorganized to make topics easier to find, improving ease of use. Covers new topics that will help you develop the skills needed to practice according to the TJC and ACCN recommendations. Covers new skills that will prepare you for nursing practice in a wide variety of environments. Features a unique new chapter, Using Evidence in Practice, that introduces you to using evidence to solve clinical problems. Introduces you to Consistent Patient Identification Protocol as recommended by The Joint Commission, improving quality of care and patient safety. Includes enhanced and greatly expanded end-of-chapter exercises, now featuring case study questions, NCLEX alternate format questions, and multiple-choice questions.

Yoost and Crawford's *Fundamentals of Nursing* is back for a second-edition encore! The text that made its name by focusing on simple language and active learning continues its focus on helping you truly understand, apply, and retain important nursing information and concepts. Using a warm and conversational style, this new second edition guides you towards a basic understanding of the nursing profession and then logically progresses through the nursing process and into the safe and systematic methods of applying care. Each chapter features realistic and complex case studies and critical thinking exercises woven throughout the content to help you continually apply what you've learned to actual patient care. A conceptual care mapping approach — created by Yoost and Crawford themselves — further your ability to make clinical judgments and synthesize knowledge as you develop plans of care after analyzing and clustering related patient assessment data. All of this paired with a wealth of student-friendly learning features and clinically-focused content offers up a fundamentally different — and effective — way for you to easily master the fundamentals of nursing. **UNIQUE!** Warm, friendly writing style slows down the pace of information to give readers time to critically think and master all

fundamental concepts and skills.

UNIQUE! Building block approach groups topics and concepts together

thematically, in the order needed for readers to build their knowledge.

UNIQUE! Objective-driven approach presents clearly defined, numbered objectives that coordinate with all content and then wrap up with Objective

Summaries. **UNIQUE!** Active learning activities are incorporated throughout every chapter to help readers learn to apply chapter content to broader nursing concepts and realistic patient scenarios.

UNIQUE! Conceptual care mapping is taught and used throughout the text in

conjunction with the Conceptual Care Map Creator. **UNIQUE!** Emphasis on QSEN reinforces the Quality and Safety Education for Nurses competencies,

including: patient-centered care, teamwork and collaboration, evidence-based practice, quality improvement, safety, and informatics. Special feature

boxes cover the areas of: diversity consideration, evidence-based practice, informatics, patient education, healthy

literacy, health assessment questions, interprofessional collaboration and

delegation, ethical and legal practice, home care considerations, safe practice alerts, QSEN, critical thinking exercises, and nursing care guidelines. **NEW!**

Interprofessional collaboration and delegation content appears throughout the text along with new IPE activities

that are integrated into the Evolve resources. **NEW & UNIQUE!** Review and exam questions tied to learning

objectives use a building-block style approach that starts at lower Bloom's taxonomy levels in early chapters and

builds to more complex levels as readers acquire more knowledge. **NEW!**

Emphasis on assignment and delegation covers the differences between them

and how and when they're appropriate for an RN. NEW! Content on complementary therapies has been integrated throughout the text to reflect the changes to the NCLEX exam. NEW! Additional information has been added in the areas of HCAHPS, Health Literacy, Patient Education, Drugs of Abuse, Zika, Ebola, and more.

Falls among the elderly are common and result in personal injury, mortality, and increased healthcare costs. Employing the Elderly Falls Screening Test (EFST), Timed Up and Go (TUG) and Tinetti Scale, a multidisciplinary team at Johns Hopkins Hospital conducted an assessment of 104 neurology patients to identify fall risk factors within the ambulatory care setting. Results indicated a single question within the EFST, "Have you fallen or nearly fallen in the last year?" most accurately identified the majority of patients at high risk. Recommended was to formalize the asking of this question during patient appointing so that individualized fall prevention measures could be implemented effectively. Environmental hazards were also identified during the assessment and included potential threats to patient safety within the waiting area, hallways, bathrooms, and examination rooms. The result was a system-wide process to reduce or eliminate associated risks.
