With C. Martin Hinckley's new book *Make No Mistake! An Outcome Based Approach to Mistake-Proofing*, that vision can become a reality. If you work for a company that emphasizes traditional quality control methods, it's unlikely that you've seen defects eliminated despite your substantial efforts. *Make No Mistake!* clarifies the reasons why such traditional methods fail and shows how world-class quality can be achieved at a minimal cost through mistake-proofing — the practice of controlling virtually every source of potential errors. As the author states, "The great value of mistake-proofing is that, independent of the cause, psychological factor, production stage, or potential consequences, it blocks or warns about an undesired outcome at a point in the process when the consequences can be minimized." Truly the first of its kind, *Make No Mistake!* is a compendium of the best methods for reducing complexity, variation, confusion and the other root causes of defects — but the centerpiece of this powerful mistake-proofing tool is an outcome-based classification system that focuses on preventing rather than detecting defects. Even more importantly, Hinckley's mistake-proofing documentation forms will help you adapt this methodology to your own defect prevention efforts. *Make No Mistake!* is an amazing compilation of mistake-proofing tools that is encyclopedic in scope. Because mistake-proofing is a skill that improves through familiarity with previous solutions, Hinckley's new classification systems is the key to rapidly finding outstanding solutions to current problems on the shop floor. *Make No Mistake!* is one book that will be invaluable in your company's quest for quality. *Make No Mistake!* includes: Over 200 mistake-proofing examples from varied industries Easy-to-use mistake-proofing documentation forms you can use on the job Introduction to principles of mistake-proofing and design for assembly A quick, step-by-step methodology for developing superior mistake-proofing concepts Listing of select suppliers of mistake-proofing devices

The book introduces the reader to the concepts of Scientific Molding and Scientific Processing for Injection Molding, geared towards developing a robust, repeatable, and reproducible (3Rs) molding process. The effects of polymer morphology, thermal transitions, drying, and rheology on the injection molding process are explained in detail. The development of a robust molding

process is broken down into two sections and is described as the Cosmetic Process and the Dimensional Process. Scientific molding procedures to establish a 3R process are provided. The concept of Design of Experiments (DOEs) for and in injection molding is explained, providing an insight into the cosmetic and dimensional process windows. A plan to release qualified molds into production with troubleshooting tips is also provided. Topics that impact a robust process such as the use of regrind, mold cooling, and venting are also described. Readers will be able to utilize the knowledge gained from the book in their day-to-day operations immediately. The second edition includes a completely new chapter on Quality Concepts, as well as much additional material throughout the book, covering fountain flow, factors affecting post mold shrinkage, and factor selections for DOEs. There are also further explanations on several topics, such as in-mold rheology curves, cavity imbalances, intensification ratios, gate seal studies, holding time optimization of hot runner molds, valve gated molds, and parts with large gates. A troubleshooting guide for common molded defects is also provided.

This book details the factors involved in the injection moulding process, from material properties and selection to troubleshooting faults, and includes the equipment types currently in use and machine settings for different types of plastics. Material flow is a critical parameter in moulding and there are sections covering rheology and viscosity. High temperature is also discussed as it can lead to poor quality mouldings due to material degradation. The text is supported by 74 tables, many of which list key properties and processing parameters, and 233 figures; there are also many photographs of machinery and mouldings to illustrate key points. Troubleshooting flow charts are also included to indicate what should be changed to resolve common problems. Injection moulding in the Western World is becoming increasingly competitive as the manufacturing base for many plastic materials has moved to the East. Thus, Western manufacturers have moved into more technically difficult products and mouldings to provide enhanced added value and maintain market share. Technology is becoming more critical, together with innovation and quality control. There is a chapter on advanced processing in injection moulding covering multimaterial and assisted moulding technologies. This guide will help develop good technical skills and appropriate processing techniques for the range of plastics and products in the marketplace. Every injection moulder will find useful information in this text, in addition, this book will be of use to experts looking to fill gaps in their knowledge base as well as those new to the industry. ARBURG has been manufacturing injection moulding machines since 1954 and is one of the major global players.
