(Retired) shuns the
idea of being politically
correct with this
insider's account of
what it's like to be a
Washington, D.C.
police officer. He leads
readers on a series of
adventures that span
thirty years in law
enforcement,
beginning as a police
rookie in 1983, to his
days with the force's
elite SWAT team, to his
days with the force's
Harbor Patrol Branch,
and right up to his
retirement in 2012. He
learned early on that
being a police officer is
like being an artist: It's
open to interpretation.
You must make
nonbelievers believe
and crush anyone who
challenges your
authority. Over time,
his fellow officers
became family, and

they supported each
other through good
times and bad. They
did their jobs no matter
how dangerous the
situation-and concerns
about public
perception rarely
entered the equation.
Develop a newfound
respect for the dangers
that police officers face
on a daily basis, as well
as changes that are
leading to "The Erosion

buying and riding
Japanese bikes from
the 1960s to the early

on mainstream,
affordable models from
the `big four': Honda,

illustrated in color
throughout, the book
provides a brief history
of the Japanese

motorcycle industry, its post-war rise and displacement of traditional British, European and American marques. Specific bikes are then grouped and discussed in detail, providing an essential reference for buyers and enthusiasts alike.

Mennonites Parragon Publishing India Kevin Cameron is one of the most widely read motorcycle journalists in the world--for reasons that this collection makes immediately and undeniably clear. Here are the feature articles and columns that have made Cameron a must-read for motorcycle aficionados: stories of the racing life; interviews with top-notch racers; profiles of builders and engineers (like John Britten); accounts of changes in the racing world; analyses of

riding techniques and winning technology; reports of races; and popular pieces about engine and suspension theory. With short introductions to each piece, Cameron puts his on-the-spot writing on motorcycle racing into context, and offers a quick, clear history of the best on bikes.

The authors offer evidence that U.S. interest rate policy has an important influence in the determination of credit spreads on emerging market bonds over U.S.

benchmark treasuries and therefore on their cost of capital. Their analysis improves on the existing literature and understanding by addressing the dynamics of market expectations in shaping views on interest rate and monetary policy changes and by recognizing nonlinearities in the link between U.S. interest rates and emerging market bond spreads, as the level of interest rates affect the market's perceived probability of default and the solvency of emerging market borrowers. For a country with a moderate level of debt, repayment prospects would remain good in the face of an increase in U.S. interest rates, so there would be little

increase in spreads. A country close to the borderline of solvency would face a steeper increase in spreads. Simulations of a 200 basis points (bps) increase in U.S. interest rates show an increase in emerging market spreads ranging from 6 bps to 65 bps, depending on debt/GDP ratios. This would be in addition to the increase in the benchmark U.S. 10 year Treasury rate.

Spanning the nineteenth and twentieth centuries, this fascinating history explores the lives and achievements of great women in science across the globe. Ten Women Who Changed

Science and the World tells the stories of trailblazing women who made a historic impact on physics, biology, chemistry, astronomy, and medicine. Included in this volume are famous figures, such as two-time Nobel Prize winner Marie Curie, as well as individuals whose names will be new to many, though their breakthroughs were no less remarkable. These women overcame significant obstacles, discrimination, and personal tragedies in their pursuit of scientific advancement. They persevered in their research, whether creating life-saving drugs or expanding our knowledge of the cosmos. By daring to ask 'How?' and 'Why?',

each of these women made a positive impact on the world we live in today. In this book, you will learn about:

Astronomy Henrietta Leavitt (United States, 1868–1921) discovered the period-luminosity relationship for Cepheid variable stars, which enabled us to measure the size of our galaxy and the universe. **Physics** Lise Meitner (Austria, 1878–1968) fled Nazi Germany in 1938, taking with her the experimental results which showed that she and Otto Hahn had split the nucleus and discovered nuclear fission. Chien-Shiung Wu (United States, 1912–1997) demonstrated that the widely accepted ‘law of parity’, which stated that left-spinning and right-spinning

subatomic particles would behave identically, was wrong. **Chemistry** Marie Curie (France, 1867–1934) became the only person in history to have won Nobel prizes in two different fields of science. Dorothy Crowfoot Hodgkin (United Kingdom, 1910–1994) won the Nobel Prize for Chemistry in 1964 and pioneered the X-ray study of large molecules of biochemical importance. **Medicine** Virginia Apgar (United States, 1909–1974) invented the Apgar score, used to quickly assess the health of newborn babies. Gertrude Elion (United States, 1918–1999) won the Nobel Prize for Physiology or Medicine in 1988 for her advances in drug

development. Biology
Rita Levi-Montalcini
(Italy, 1909–2012) won
the Nobel Prize for
Physiology or Medicine
in 1986 for her co-
discovery in 1954 of
Nerve Growth Factor
(NGF). Elsie
Widdowson (United
Kingdom, 1906–2000)
pioneered the science
of nutrition and helped
devise the World War II
food-rationing
program. Rachel
Carson (United States,

famously with her

"Books geographically

dominate the study of
Mennonites in America.
The intriguing history
of Mennonites in the
American West
remains untold. In
*From Digging Gold to
Saving Souls*, Brian
Froese introduces
readers for the first
time to the California
Mennonite experience.
Although a few
Mennonites did dig for
gold in the 1850s, the
real story of
Mennonites in
California begins in the
1890s with westward
migrations for fertile

soil and healthy sunshine. By the mid-twentieth century, the Mennonite story in California had developed into an interesting tale of religious conservatives--traditional agrarians--finding their way in an increasingly urban and religiously pluralistic California. Some California Mennonites negotiated new identities by endorsing conservative evangelicalism; some found them in reclamations of sixteenth-century Anabaptists. Still other Mennonites found meaningful religious experience by engaging in social action and justice even when these actions appeared in "secular" forms. These emerging identities--Evangelical, Anabaptist, and

secular--covered a broad spectrum, yet represented a selective retaining and discarding of Mennonite religious practices and expressions. From *Digging Gold to Saving Souls* touches on such topics as migration, pluralism, race, gender, pacifism, institutional construction, education, and labor conflict, all of which defined the experience of Mennonites of California. Brian Froese shows how this experience was a rich, complex, and deliberate move into modern society. In *From Digging Gold to Saving Souls*, he introduces readers to a dynamic people who did not simply become modern, but who chose to modernize on their

own terms"--

Bernt Spiegel's *The Upper Half of the Motorcycle* was a best-selling motorcycling book in its original German with multiple editions and printings to its credit. Now translated into English, its provocative message is available to a wider audience. Spiegel's metaphor considers the rider and the motorcycle as a single unit, the rider being the upper half. Taking a multidisciplinary approach, the author draws on anthropology, psychology, biology, physics, and other disciplines to analyze the theory and function of the man-machine unit. Motorcycle riding is seen as a junction where people have

created machines for personal transport and then become so adept at using them that the machine becomes like an extension of the rider themselves. The ultimate goal for riders is the integration of the man-machine interface and subsequent skill development to the point of virtuosity. Spiegel considers the various aspects of motorcycle riding that must be understood, practiced, and mastered before virtuosity can be attained. Many anecdotes, supplementary material, and in-depth treatment of specialized topics is contained in sidebars and footnotes. Numerous diagrams and photographs illustrate the book's principles allowing the

reader to consider and develop their riding skill set.
