This book constitutes

the refereed

proceedings of the 7th

International

Conference on Model

Transformation, ICMT

2014, held in York, UK,

in July 2014. The 14

revised papers were

carefully selected from

38 submissions. The

papers have been

organized in topical

sections on model

transformation testing,

foundations of model

synchronization,

applications of model

synchronization and

tracing and reverse

engineering of

transformations.

Proceedings Springer

"This is an ambitious

book. It aims at

nothing less than a

comprehensive

account of the state of

the art of social work

research

internationally and an

intellectually original

statement that will

help to define and

shape social work research. Those with a serious interest in social work research will agree that this is a major undertaking and one that should put social work research 'on the map'." - Ian Sinclair, University of York, UK "This terrific Handbook provides an essential map for navigating the complex currents of social work research today. It resists polemical and simplistic binaries to chart a course that emphasizes diversity, pluralism and sensitivity to political contexts in many featured exemplars. As key chapters note, inherent tensions at the heart of social work itself are mirrored in current debates about the purposes and methods of social work research. Rather than

patch over differences, the volume invites us to understand historical roots of unresolvable tensions, and live with them. The international scope of the volume is unique--scholars from more than a dozen different countries were involved --and its broad scope counters the tendency toward parochialism of much North American literature. The Handbook should be essential reading for students and academics." - Catherine Riessman, Boston University, USA The SAGE Handbook of Social Work Research provides a comprehensive, internationally-focused account of leading social work research, offering an original and defining statement on

contemporary theory and practice within the field. The groundbreaking Handbook engages critically with the nature and role of social work research and evaluation in contemporary societies around the globe, and asks four key questions: - What is the role and purpose of social work research? - What contexts shape the practice and purpose of social work research? - How can we maximise the quality of the practice of social work research? - How can the aims of social work in its varied domains be met through social work research? Ranging over local, national and international issues, and exploring questions of theory

and practice, this is a diverse and constructively organized overview of the field. It will quickly be recognized as a benchmark in the expanding field of social work research, setting the agenda for future work in the arena.

Digital health has faced obstacles from poor IT systems

implementation to lack of consumer acceptance. Very little is known about the management, development, and design of digital health projects, the level of IT adoption, and the role of digital leadership that is needed to successfully drive health projects. Digital health, if successfully implemented, offers tremendous opportunities in health data analytics for consumers of health services and service providers that include health information portability, personalization of health information by consumers, easy access and usefulness of health information, and better management of electronic data records by health institutions

and the government. Research suggests that despite assurances provided to consumers, digital information security and digital health innovation have been a challenge and are only slowly being accepted.

Opportunities and Challenges in Digital Healthcare Innovation is an innovative research publication that identifies digital health innovation opportunities and obstacles and proposes frameworks and conceptual models for digital health innovation that empowers consumers of digital health to use the information to make informed decisions and choices. Highlighting topics such as data analytics, health regulations, and telehealth, this book is

ideal for IT consultants, medical software developers, data scientists, hospital administrators, medical practitioners, policymakers, academicians, researchers, and students.

designed exactly on the latest pattern of GATE exam. IGI Global Taking the concept and the practice of reflective teaching forward, this book introduces a well-structured, flexible framework for use by teachers at all levels of development, from pre-service to novice to the most experienced. The framework outlines five levels of reflective practice—Philosophy; Principles; Theory-of-Practice; Practice; Beyond Practice—and provides specific techniques for teachers to implement each level of reflection in their work. Designed to allow readers to take either a deductive approach, moving from theory-into-practice, or an inductive approach where they start from

a practice-into-theory position, the framework can be used by teachers alone, in pairs, or in a group. Globalization, Transformation, and Cultures in Early Childhood Education and Care Disha Publications Person-centred care is the idea that the healthcare professional shifts their focus from routine tasks and processes to the individual needs of the patients. It has been highlighted as the cornerstone of high quality care. But whilst few practitioners intend to work in a non-person-centred way, for reasons such as priorities, organisational policies, workplace culture and resources, a person-centred approach can be very difficult to

achieve. This book provides a practice-focused exploration of how the ideas of person-centeredness can be developed and incorporated in to everyday practice: - It forms each chapter around an engaging case study, with examples from adult and child health, mental health, learning disabilities and many more. - It introduces the theoretical basis of person-centred care, including the benefits it has for working environments, staff and patients. - It demonstrates how meaningful practice development partnerships can be made with patients, including who to involve and how to involve them. - It takes the reader through the steps of developing a

person-centred ethos- from encouraging people to participate in the development, to evaluating the progress and sustaining it in the long run. With clear and accessible guidance through the use of chapter overviews, key points, activities and web-based resources, this is an important book for anyone interested in developing a person-centred approach to care.

Critical Practice in P-12 Education: Transformative Teaching and Learning Elsevier

Health Sciences
This book constitutes the refereed proceedings of the 20th IFIP WG 5.5 Working Conference on Virtual Enterprises, PRO-VE 2019, held in

Turin, Italy, in September 2019. The 56 revised full papers were carefully reviewed and selected from 141 submissions. They provide a comprehensive overview of major challenges and recent advances in various domains related to the digital transformation and collaborative networks and their applications with a strong focus on the following areas related to the main theme of the conference: collaborative models, platforms and systems for digital revolution; manufacturing ecosystem and collaboration in Industry 4.0; big data analytics and intelligence; risk, performance, and uncertainty in collaborative

networked systems; semantic data/service discovery, retrieval, and composition in a collaborative networked world; trust and sustainability analysis in collaborative networks; value creation and social impact of collaborative networks on the digital revolution; technology development platforms supporting collaborative systems; collective intelligence and collaboration in advanced/emerging applications; and collaborative manufacturing and factories of the future, e-health and care, food and agribusiness, and crisis/disaster management.

A Framework for TESOL Professionals Springer Publishing Company
This book constitutes

the refereed proceedings of the 11th International Conference on Model Transformation, ICMT 2018, held as part of STAF 2018, in Toulouse, France, in June 2018. The 9 full papers were carefully reviewed and selected from 24 submissions. This book also presents 1 invited paper. The papers include research, application, and tool demonstration papers presented in the context of four sessions on verification of model transformations, model transformation tools, transformation reuse and graph transformations.

Springer

TAPSOFT '89 is the Third International Joint Conference on Theory

and Practice of Software Development held in Barcelona, Spain, March 13-17, 1989. The conference consisted of three parts: - Advanced Seminar on Foundations of Innovative Software Development - Colloquium on Trees in Algebra and Programming (CAAP '89) - Colloquium on Current Issues in Programming Languages (CC IPL) The TAPSOFT '89 Conference Proceedings are published in two volumes. The first volume includes the papers from CAAP plus the more theoretical ones of the invited papers. The second volume comprises the papers from CC IPL and the invited papers more relevant to

current issues in programming languages.

John Wiley & Sons

This book collects the proceedings of the International Workshop on Intelligent Computing in Pattern Analysis/Synthesis, IWICPAS 2006, held in Xi'an, China alongside the 18th International Conference on Pattern Recognition, ICPR 2006. The book presents 51 revised full papers and 128 revised poster papers, organized in topical sections on object detection, tracking and recognition, pattern representation and modeling, visual pattern modeling, image processing,

compression and coding and texture analysis/synthesis.

Theory and Practice of Model Transformations

Disha Publications

The PRET working conferences are set up as a one-day event in such a way that it attracts an audience from both industry and academia. PRET 2010 was a continuation of the PRET 2009 working conference, which was organized as the industrial track at the 2009 CAISE conference. The PRET 2010 working conference was organized as part of the enterprise engineering week, and was co-located with PoEM 2010 and TEAR 2010 in Delft. The statement that modern-day enterprises are in a constant state of flux is in 2010 even more true

than it was in 2009. The markets are in a state of confusion and seem to have no direction at all, as they are swinging back and forth depending on often contradictory signals and economic forecasts. As a consequence, enterprises, be they private businesses, government departments or other organizations, are taking their measures. Restructuring, divesting, - proving performance and merging are among the usual transformation activities that enterprises conduct to provide answers to the ever-challenging demands that are put on them. In addition to the tricky economic situation, developments like

globalization, rapid technological advancement, aging and the changing mindset of customers contribute to a situation in which nothing is certain anymore and in which change is the only constant. PRET approaches these developments and the impact they have on enterprises from a holistic enterprise engineering perspective. [An Essential Resource WWW.MathNotion.com](http://WWW.MathNotion.com) Thoroughly updated to reflect major advances in the field of immunology, this second edition of *Cancer Immunotherapy Principles and Practice*, from the Society for Immunotherapy of Cancer (SITC), remains the definitive resource for information on tumor immunology and

cancer immunotherapy treatments. An essential reference for both novice and experienced cancer researchers, oncologists, and related practitioners alike, the book not only guides readers through the fundamental scientific principles of the field all the way to translational and practical clinical applications for treating and managing oncologic disease, but also provides a comprehensive understanding of the regulatory processes that support the safe and effective delivery of immunotherapy to patients with cancer. The expanded and updated second edition now spans 68 chapters, including 12 new chapters, covering major topics and

innovations that have shaped the rapid development of immunotherapy and its ascension into the standard of care as first-line treatment for a growing number of disease settings. New to this edition are chapters with deeper insight into our understanding of cancer genomics and determinants of response, immunogenic cell death, cancer and stromal cell-intrinsic pathways of immune resistance, cancer immune exclusion, adoptive cell therapy, metabolomics, tumor mutation burden, immunotherapy in combination with radiation therapy, synthetic biology, and more. Complete with detailed illustrations, tables, and key points

for targeted reference, *Cancer Immunotherapy Principles and Practice, Second Edition* is the most comprehensive and authoritative resource for scientists and clinicians looking to expand their knowledge base of this dynamic field. Key Features: Offers key insights and perspectives on cancer immunology and immunotherapy treatments from renowned experts in the field Covers the basic principles and science behind cancer immunotherapy and tumor immunology Includes treatment strategies for a vast array of available immunotherapy classes and agents, such as cytokine therapies, oncolytic viruses, cancer vaccines, CAR T

therapies, and combination immunotherapies Provides essential information on FDA-approved immunotherapies, including clinical management and outcome data related to response rates, risks, and toxicities Discusses special considerations for immunotherapy in the context of specific disease settings, including skin cancers, genitourinary cancers, gastrointestinal cancers, hepatocellular carcinomas, gynecologic malignancies, breast cancers, lung cancers, head and neck cancers, brain tumors, sarcomas, pediatric cancers, and treatments combined with radiation therapy Clarifies the complex

regulatory aspects behind the development and approval of immunotherapy drugs

Promoting Teacher Reflection in Second Language Education

Springer Nature

The papers in this volume comprise the refereed proceedings of the conference Artificial Intelligence in Theory and Practice (IFIP AI 2010), which formed part of the 21st World Computer Congress of IFIP, the International Federation for Information Processing (WCC-2010), in Brisbane, Australia in September 2010. The conference was organized by the IFIP Technical Committee on Artificial Intelligence (Technical Committee 12) and its Working Group 12.5 (Artificial

Intelligence Applications). All papers were reviewed by at least two members of our Program Committee. - nal decisions were made by the Executive Program Committee, which comprised John Debenham (University of Technology, Sydney, Australia), Ilias Maglogiannis (University of Central Greece, Lamia, Greece), Eunika Mercier-Laurent (KIM, France) and myself. The best papers were selected for the conference, either as long papers (maximum 10 pages) or as short papers (maximum 5 pages) and are included in this volume. The international nature of IFIP is amply reflected in the large number of countries represented

here. I should like to thank the Conference Chair, Tharam Dillon, for all his efforts and the members of our Program Committee for reviewing papers under a very tight de- line. Reconceptualization and Comparison Springer Science & Business Media "Dr. Wheeler has skillfully crafted a text that covers basic psychiatric principles and skills from developing a therapeutic relationship and assessing and diagnosing the client to providing evidence-based psychotherapy for a variety of patient populations... This text is an excellent primer for teaching therapy skills and, although targeting graduate psychiatric nursing students, would prove

equally valuable for students of any mental health discipline. It is also a resource for experienced clinicians wanting to expand their understanding of trauma and how adaptive information processing might be used as an organizing framework for all psychotherapy." -- Linda Mabey, Journal of EMDR Practice and Research DESCRIPTION This is a how-to compendium of evidence-based approaches to practicing psychotherapy for both the experienced and neophyte advanced practice psychiatric nurse. This book integrates neuroscience with relationship science and unites disparate psychotherapeutic approaches into a

model that is concise and straightforward, yet sufficiently comprehensive to provide a framework for practice. The most useful therapeutic models are highlighted with principles, and techniques of treatment for nurse psychotherapists and those with prescriptive authority. This second edition expands the award-winning first edition, providing guidelines, forms, and case studies to assist APPNs in deciding which treatment to use based on psychotherapy outcome studies and practice guidelines. New Chapters in the Second Edition: Motivational Interviewing Dialectical Behavior Therapy Family Group Therapy Eye Movement

Desensitization and Reprocessing (EMDR) Therapeutic Approaches for Addictions New CPT Codes & Reimbursement Awards and Reviews for the First Edition: APNA Media Award AJN Book of the Year Award 5 Star Amazon Reviews 4 Star Doody Review "Lays out a holistic paradigm for advanced psychiatric nursing (APN) practice by drawing upon a neuroscience of information processing, human development, attachment theory, and trauma. . . (and) explains the essentials of psychotherapy by melding principles underlying the therapeutic alliance, adaptive information processing (AIP), change, and a hierarchically arranged

treatment format that fosters healing through the resolution of dysfunctional memory this important text holds true to the historical basis for psychiatric nursing being organized around phases and principles of the nurse-patient relationship." Margaret England, PhD, RN, CNS, Perspectives in Psychiatric Care "Wheeler offers the field a scholarly training manual. . . grounded in Shapiro's (2001) adaptive information processing paradigm . . . (where) the brain is viewed as an information processing system with innate self-healing mechanisms that regulate its internal environment to survive and to maintain a stable, constant

condition through dynamic regulation." Robert M. Greenfield, PhD, Journal of Trauma & Dissociation
Advances in Machine Vision, Image Processing, and Pattern Analysis
 Springer
 Over the past decades, reflection has taken centre stage in nursing education but it is easy to get stuck in a superficial cycle of storytelling and self-examination, without getting any further insights into your own practice and abilities. Reflection for Nursing Life starts with a basic introduction to reflective practice and moves through to look at more critical perspectives, with guidance for reflecting on the complex realities of practice. This accessible text is

designed to support a deeper understanding of the value of reflection and its relationship with the needs of modern practice. Beginning with discussions of self-awareness and the reflective cycle, it goes on to explore ideas about critical incidents, critical reflection models and transformational learning. It integrates cutting-edge neuro-scientific research and thinking about emotional labour and intelligence in healthcare into

mainstream reflective practice, drawing on both new and established ways of guiding learning and professional judgment. Reflection for Nursing Life includes numerous exemplar reflective narratives, diagrams and exercises to help the reader identify their strengths and weaknesses, whilst tips for overcoming weaknesses and developing strengths are also provided. It is the ideal text for nursing students and practitioners looking to improve their reflective practice skills.
