Indicators and rankings are widely used by governments and international organizations to assess the effectiveness, efficiency, and success of policy decisions. The role of indicators is however little examined. This book closes this gap by evaluating the creation of indicators, their impact on policy decisions, and the implications of their use.

What creates corporate reputations and how should organizations respond? Corporate reputation is a growing research field in disciplines as diverse as communication, management, marketing, industrial and organizational psychology, and sociology. As a formal area of academic study, it is relatively young with roots in the 1980s and the emergence of specialized reputation rankings for industries, products/services, and performance dimensions and for regions. Such rankings resulted in competition between organizations and the alignment of organizational activities to qualify and improve standings in the rankings. In addition, today's changing stakeholder expectations, the growth of advocacy, demand for more disclosures and greater transparency, and globalized, mediatized environments create new challenges, pitfalls, and opportunities for organizations.

Successfully engaging, dealing with, and working through reputational challenges requires an understanding of options and tools for organizational decision-making and stakeholder engagement. For the first time, the vast and important field of corporate reputation is explored in the format of an encyclopedic reference. The SAGE Encyclopedia of Corporate Reputation comprehensively overviews concepts and techniques for identifying, building, measuring, monitoring, evaluating, maintaining, valuing, living up to and/or changing corporate reputations. Key features include: 300 signed entries are organized in A-to-Z fashion in 2 volumes available in a choice of electronic or print formats Entries conclude with Cross-References and Further Readings to guide students to in-depth resources. Although organized A-to-Z, a thematic "Reader's Guide" in the front matter groups related entries by broad areas A Chronology provides historical perspective on the development of corporate reputation as a discrete field of study. A Resource Guide in the back matter lists classic books, key journals, associations, websites, and selected degree programs of relevance to corporate reputation. A General Bibliography will be accompanied by visual maps noting the relationships between the various disciplines touching upon corporate reputation studies. The work concludes with a comprehensive Index, which—in the electronic version—combines with the Reader's Guide and Cross-References to provide thorough search-and-browse capabilities

This book honors the work of Ruut Veenhoven, who has been a pioneer and leader in the field of happiness studies for the past 50 years. It brings together experts in the field discussing Veenhoven's work as well as taking up themes from his workshops over the years to analyze how and where the field has expanded following his research. Veenhoven's contributions include developing theories and measuring instruments, creating the world's first and largest database of happiness research, founding the world's first and most frequently cited Journal of Happiness Studies, and student development in and popularization of the field of happiness studies. He has extensive publications through the International Sociological Association and the International Society for Quality of Life Studies, and the research field of happiness studies would not have become as broad today without his enormous contributions. Friends and former students of Veenhoven provide both academic and anecdotal discussions in this festschrift, which is important for anyone interested in the development of happiness research.

Let me make it clear from the outset that what follows is quite simply a reprint of certain portions of our web site. Specifically, those portions dealing with dial test indicators. This book came about as a result of the many requests we have had for a print version, something that can be kept on the bookshelf-a reference perhaps-or reading material, when sitting in front of the computer screen is not an option. When we began the project it became stunningly evident that a print version of the complete web site would exceed 3,000 pages. That could amount to an encyclopedia of ten volumes not to mention quite a bit of work on my part. I also noticed that a straight forward print-out would not make much sense. Web sites are designed in non-linear form. That is, one web page does not lead logically to the next. Each web page contains numerous links which will have the visitor jump all over the site without necessarily being aware that this is a spider web, a maze of information. In order to keep a direct correlation between the printed chapters in this book and what we call "web

pages" on the computer, I have had to make reference to the website's web page numbers. In the text that follows, any reference to web page numbers refers to the web page numbering on our web site. Thus, when the reader finds a topic of interest, it is an easy matter to go to the computer and locate the same information. To make this book manageable in size, I have chosen to focus on test indicators alone. Indicator repairs are what we started with in 1959 and specifically the Swiss-made gages. The website is a continual work in progress. New information gets added about half a dozen times each day. I started to do this simply to create a reference source for our own use. How else could we remember all the information that was unearthed? Looking at the Table of Contents, you will see that the focus remains principally on the quality indicators made by established manufacturers in Switzerland, Germany, Japan and the USA. I feel justified in focusing on what we know best. I recently calculated that I have personally repaired over 35,000 indicators in the years that I have been working. My father easily matched that number along with tens of thousands of dial calipers and micrometers which he and my brother have repaired. What I learned during all these years has all been put into this repository: [www.longislandindicator.com](http://www.longislandindicator.com) Here you will find charts of manufacturers' specifications and spare parts lists, critical evaluations of brands and models, instructions for cleaning, servicing and calibrating indicators and hundreds of web pages of information which often exceed what manufacturers' catalogs provide. In fact, we have had manufacturers refer to our website to learn things about their own products!
