 This book is the distillation of many years experience of working with Weber carburetors. These celebrated carburetors have been fitted to some of the most exciting and memorable cars and have been more widely used by tuners and modifiers, both for road and competition machinery, than any alternative. The mysteries of why and how they work so well and the practicalities of getting the best from them in any application are explained at length. Setting the carburetor to suit a particular engine, fault-finding on an existing installation, and the maintenance and repair of older carburetors are all topics which receive detailed attention. Anyone maintaining or restoring a classic Weber-equipped car, or contemplating a Weber-based conversion, or simply interested in the science of engine performance and tuning, will learn something from these pages.

 In the summer of 1773 the 14-year old Horatio Nelson took part in an expedition to the Arctic, which came close to ending his naval career before it had begun. The expedition was to find a navigable northern passage between the Atlantic and Pacific, and was supported by the Royal Society and King George III. Two bomb vessels HMS Racehorse and Carcass were fitted out and strengthened under the command of Captain Hon. Constantine Phipps. It was an extremely cold Arctic summer and the ships became locked in ice far from Spitzbergen and were unable to cut

their way out until days later when the wind changed and the ice broke up. The ships were extricated and returned home. On the trip, the young Nelson had command of one of the smaller boats of the ships, a four-oared cutter manned by twelve seamen. In this he helped to save the crew of a boat belonging to the Racehorse from an attack by a herd of enraged walrus. He also had a more famous encounter with a polar bear, while attempting to obtain a bearskin as a present for his father, an exploit that later became part of the Nelson legend. Drawing on the ship's journals and expedition commander Phipps' journal from the National Archives, the book creates a picture of the expedition and life on board. Using the ships' muster books it also details the ship's crews giving the different roles and ranks in the ships. The book is illustrated using some of the ship's drawings and charts and pictures of many objects used on the ship, while a navigational chart of the route taken has been created from the logbooks. The book also looks at the overall concept of naval exploration as set in train by Joseph Banks and the Royal Society. The fact that the expedition failed as a result of poor planning with potentially tragic results demonstrates the difficulties and uncertainties of such an expedition. It also looks at a great naval commander at the earliest stage of his career and considers how the experience might have shaped his later career and attitudes. Other great captains and voyages are discussed alongside Nelson, including Captain Cook and his exploration of the south seas and the later ill-fated northern journeys of Franklin and Shackleton.

Getting the Message Through, the companion volume to Rebecca Robbins Raines' *Signal Corps*, traces the evolution of the corps from the appointment of the first signal officer on the eve of the Civil War, through its stages of growth and change, to its service in Operation DESERT SHIELD/DESERT STORM. Raines highlights not only the increasingly specialized nature of warfare and the rise of sophisticated communications technology, but also such diverse missions as weather reporting and military aviation. Information dominance in the form of superior communications is considered to be sine qua non to modern warfare. As Raines ably shows, the Signal Corps—once considered by some Army officers to be of little or no military value—and the communications it provides have become integral to all aspects of military operations on modern digitized battlefields. The volume is an invaluable reference source for anyone interested in the institutional history of the branch.

The top-selling auto repair guide—400,000 copies sold—now extensively reorganized and updated Forty-eight percent of U.S. households perform at least some automobile maintenance on their own, with women now accounting for one third of this \$34 billion automotive do-it-yourself market. A complete reorganization now puts relevant repair and maintenance information directly after each automotive system overview, making it much easier to find hands-on fix-it instructions. Author Deanna Sclar has updated systems and repair information throughout, eliminating discussions of carburetors and adding coverage of hybrid and alternative fuel vehicles. She's also revised schedules for tune-

ups and oil changes, included driving tips that can save on maintenance and repair costs, and added new advice on troubleshooting problems and determining when to call in a professional mechanic. For anyone who wants to save money on car repairs and maintenance, this book is the place to start. Deanna Sclar (Long Beach, CA), an acclaimed auto repair expert and consumer advocate, has contributed to the Los Angeles Times and has been interviewed on the Today show, NBC Nightly News, and other television programs.

Looks at the operations of the International Space Station from the perspective of the Houston flight control team, under the leadership of NASA's flight directors, who authored the book. The book provides insight into the vast amount of time and energy that these teams devote to the development, planning and integration of a mission before it is executed. The passion and attention to detail of the flight control team members, who are always ready to step up when things do not go well, is a hallmark of NASA human spaceflight operations. With tremendous support from the ISS program office and engineering community, the flight control team has made the International Space Station and the programs before it a success.
