Cybercrime is

whether it is
in the form of

therefore
paramount
that the
security

is an issue of

global importance as new technologies have provided a world of opportunity for criminals. This book is a compilation of the collaboration between the researchers and practitioners in the security field; and provides a comprehensive literature on current and future e-security needs across applications, implementation, testing or investigative techniques, judicial processes and

criminal intelligence. The intended audience includes members in academia, the public and private sectors, students and those who are interested in and will benefit from this handbook. *Adoption, Usage, and Global Impact of Broadband Technologies: Diffusion, Practice and Policy* IGI Global This book comprehensively presents the concepts of neutron physics and imaging

including neutron properties, neutron matter interaction, neutron imaging, comparison with X-ray and physics and design of neutron sources. It discusses how neutron imaging has gained importance as a powerful non-destructive technique to understand the internal structures of materials/engineered components in wide range of industries by increasing

their applicability and efficiency. The book also covers the topics of neutron optics and detectors, basic principles of neutron radiography and tomography, related standards, safety, metrology and regulations in neutron imaging. The book presents applications of neutron imaging in the areas of aerospace industry, nuclear power and manufacturing industry,

materials science and engineering, geomechanics, national security, biological, and medical domain. Given its scope, the book will be highly beneficial for postgraduate students, researchers and industry professionals working in the area of engineering and physics, especially non-destructive testing and non-destructive evaluation through neutron imaging.

Springer Science & Business Media
The volume presents high quality papers presented at the Second International Conference on Microelectronics, Computing & Communication Systems (MCCS 2017). The book discusses recent trends in technology and advancement in MEMS and nanoelectronic

s, wireless communications, optical communication, instrumentation, signal processing, image processing, bioengineering, green energy, hybrid vehicles, environmental science, weather forecasting, cloud computing, renewable energy, RFID, CMOS sensors, actuators, transducers, telemetry systems, embedded systems, and sensor network

applications. It includes original papers based on original theoretical, practical, experimental, simulations, development, application, measurement, and testing. The applications and solutions discussed in the book will serve as a good reference material for future works. *Model Driven Engineering Languages and Systems* CRC Press Academics and policymakers frequently

discuss global governance but they treat governance as a structure or process, rarely considering who actually does the governing. This volume focuses on the agents of global governance: 'global governors'. The global policy arena is filled with a wide variety of actors such as international organizations, corporations, professional associations, and advocacy groups, all seeking to 'govern' activity

surrounding their issues of concern. Who Governs the Globe? lays out a theoretical framework for understanding and investigating governors in world politics. It then applies this framework to various governors and policy arenas, including arms control, human rights, economic development, and global education. Edited by three of the world's leading international relations

scholars, this is an important contribution that will be useful for courses, as well as for researchers in international studies and international organizations. **New Applications in IT Standards: Developments and Progress** National Academies Press Provides essential research on developing, teaching, and implementing standards in global organizations

and institutions. **GB/T 30427-2013 Translated English of Chinese Standard (GB/T 30427-2013, GBT30427-2013)** <https://www.chinesestandard.net> This Standard specifies the requirements of service, design, manufacture, and testing of electronic equipment, as well as basic hardware and software requirements considered necessary for durable and reliable

equipment. Additional requirements in other standards or specifications may complement this Standard, if applicable. List of subclauses of this Standard in which agreement between the parties is mentioned is detailed in Appendix B. This Standard applies to all electronic equipment for control, regulation, protection, supply, etc. installed on rail vehicles (including subway and

urban rail vehicle).The equipment may be powered by the batteries or generators of vehicles or powered by a low-voltage power supply with or without a direct connection to the contact system (transformer, voltage divider and auxiliary power supply).For the purposes of this Standard, electronic equipment is defined as equipment mainly composed of

semiconductor devices and recognized associated components. These components will mainly be mounted on printed boards. Note: sensors (current, voltage, speed, etc.) and firing unit printed board for power electronic equipment are covered by this Standard. Complete firing units are covered by GB/T 25122.1. This Standard is not applicable to the power electronic equipment in

the main circuits and auxiliary circuits. *Good Faith Collaboration* <https://www.chinesestandard.net> Emerging Nanotechnologies in Rechargeable Energy Storage Systems addresses the technical state-of-the-art of nanotechnology for rechargeable energy storage systems. Materials characterization and device-modeling aspects are covered in

detail, with additional sections devoted to the application of nanotechnology in batteries for electrical vehicles. In the later part of the book, safety and regulatory issues are thoroughly discussed. Users will find a valuable source of information on the latest developments in nanotechnology in rechargeable energy storage systems. This book will be of great use to researchers

and graduate students in the fields of nanotechnology, electrical energy storage, and those interested in materials and electrochemical cell development. Gives readers working in the rechargeable energy storage sector a greater awareness on how novel nanotechnology oriented methods can help them develop higher-performance batteries and supercapacitor systems Provides

focused coverage of the development, process, characterization techniques, modeling, safety and applications of nanomaterials for rechargeable energy storage systems. Presents readers with an informed choice in materials selection for rechargeable energy storage devices. Clinical Trials Handbook

 The electromagnetic compatibility (EMC) immunity requirements specified in this Part of GB/T 17799 are applicable to electrical and electronic equipment used in residential, commercial and light industrial

environments, covering the immunity requirements in the frequency range of 0 Hz~400 GHz. Frequency bands not specified in this Part do not need to be measured. If there are no relevant specific product or product type EMC immunity standards, the general EMC immunity standards in this Part apply. This Part applies to equipment directly connected to the low-voltage public mains network or to a dedicated DC power supply powered by a low-voltage public mains network. This Part also applies to battery-powered equipment or equipment powered by non-public, non-industrial low-voltage distribution systems that are to be used in the locations described below. The environments included in this Part are indoor and outdoor environments in residential, commercial and light industrial premises. The descriptions of some site environments are listed below, including (but not limited to): - Residential place, such as: residence, apartment, etc.; - Retail outlets, such as stores, supermarkets, etc.; - Commercial buildings, such as offices, banks, etc.; - Public entertainment areas, such as: cinemas, public bars, dance halls, etc.; - Outdoor

places, such as gas stations, parking lots, playgrounds and sports centers, etc.; - Light industrial places, such as workshops, laboratories, maintenance centers, etc. Any place that receives low-voltage power supply directly from the public mains network belongs to residential, commercial and light industrial environments. inspection rules, marking, packaging, transportation , and storage of electronic screw weighers (also known as screw reamer scales, screw feeder scales, hereinafter referred to as ?;ãscrew weighers?;À). This standard also provides standardized requirements and test procedures for testing the metrological or technical characteristics of screw weighers in a traceable manner. This standard is

applicable to the continuous accumulating automatic weighing apparatus (electronic screw weighers) of the screw conveyor type, which works in a continuous weighing method by using the principle of gravity, is used with single speed, multi-speed, or variable-speed screw conveyors together, and can determine the flow rate and cumulative mass of bulk

 Can scholarly journal articles and other scholarly works be made freely available on the Internet? The open access movement says "yes," and it is having a significant impact on scholarly publishing. There are two major open access strategies: (1) open access journals publish articles

(typically peer-reviewed articles) that are free of charge and may be able to be reused under an open license (e.g., a Creative Commons license), and (2) self-archiving of digital e-prints (typically prepublication versions of articles) by authors in digital repositories, where they can be accessed free of charge and sometimes reused. Transforming Scholarly Publishing through Open

Access: A Bibliography, which has over 1,100 references, provides in-depth coverage of published journal articles, books, and other works about the open access movement. Many references have links to freely available copies of included works. **INCOSE Systems Engineering Handbook** Springer Nature This Standard specifies the

requirements, test methods, inspection rules, marking, packaging, transportation and storage of infrared gas analyzers. This Standard is applicable to the non-dispersive infrared gas analyzers for the continuous determination of a certain or several components in mixed gas. *Research Challenges in Information Science* Academic Press This book constitutes the

proceedings of the 15th International Conference on Research Challenges in Information Sciences, RCIS 2021, which was planned to take place in Limassol, Cyprus, but had to change to an online event due to the COVID-19 pandemic. The conference took place virtually during May 11-14, 2021. It focused on the special theme "Information Science and Global Crisis". The scope of RCIS is summarized by the thematic areas of information systems and their engineering; user-oriented approaches; data and information management; business process management; domain-specific information systems engineering; data science; information infrastructures, and reflective research and practice. The 29 full papers and 6 work-in-progress papers presented in this volume were carefully reviewed and selected from 99 submissions. They were organized in topical sections named: Business and Industrial Processes, Information Security and Risk Management, Data and Information Management, Domain-specific Information Systems Engineering, User-Centered Approaches, Data Science and Decision Support, and Information Systems and

Their Engineering. The volume also contains 13 poster and demo papers, and 4 doctoral consortium papers. In addition, two-page summaries of tutorials and research project papers can be found in the back matter.

How Wikipedia collaboration addresses the challenges of openness, consensus, and leadership in a historical pursuit for a universal encyclopedia. Wikipedia, the online encyclopedia, is built by a community—a community of Wikipedians who are expected to “assume good faith” when interacting with one another. In Good Faith Collaboration, Joseph Reagle

examines this unique collaborative culture. Wikipedia, says Reagle, is not the first effort to create a freely shared, universal encyclopedia; its early twentieth-century ancestors include Paul Otlet's Universal Repository and H. G. Wells's proposal for a World Brain. Both these projects, like Wikipedia, were fuelled by new technology—w

hich at the time included

<p>index cards and microfilm. What distinguishes Wikipedia from these and other more recent ventures is Wikipedia's good-faith collaborative culture, as seen not only in the writing and editing of articles but also in their discussion pages and edit histories. Keeping an</p>	<p>open perspective on both knowledge claims and other contributors, Reagle argues, creates an extraordinary collaborative potential. Wikipedia's style of collaborative production has been imitated, analyzed, and satirized. Despite the social unease</p>	<p>over its implications for individual autonomy, institutional authority, and the character (and quality) of cultural products, Wikipedia's good-faith collaborative culture has brought us closer than ever to a realization of the century- old pursuit of a universal encyclopedia.</p>
