This is a methods book for elementary majors and preservice/beginning elementary teachers. It takes a very practical approach to learning to teach elementary school mathematics in an emerging Age of the Common Core State Standards. The Common Core State Standards in Mathematics (CCSSM) is not meant to be “the” official mathematics curriculum; it was purposefully developed primarily to provide clear learning expectations of mathematics content that are appropriate at every grade level and to help prepare all students to be ready for college and the workplace. A quick glance at the Table of Contents in this book indicates a serious engagement with the recommended mathematics underlying the kindergarten through grade 5 portions of the CCSSM first, with issues in content-practice assessment, learning, teaching, and classroom management pursued next and in that order. In this book we explore what it means to teach to the CCSSM within an alignment mindset involving content-practice learning, teaching, and assessment. The CCSSM content standards, which pertain to mathematical knowledge, skills, and applications, have been carefully crafted so that they are teachable, learnable, coherent, fewer, clearer, and higher. The practice standards, which refer to institutionally valued mathematical actions, processes, and habits, have been conceptualized in ways that will hopefully encourage all elementary students to engage with the content standards more deeply than merely acquiring mathematical knowledge by rote and imitation. Thus, in the CCSSM, proficiency in content alone is not sufficient, and so does practice without content, which is limited. Content and practice are both equally important and, thus, must come together in teaching, learning, and assessment in order to support authentic mathematical understanding. This blended, multisourced text is a “getting smart” book. It helps elementary majors and preservice/beginning elementary teachers work within the realities of accountable pedagogy and develop a proactive disposition that is capable of supporting all elementary students in order for them to experience growth in mathematical understanding necessary for middle school and beyond, including future careers.

Mindset Mathematics: Visualizing and Investigating Big Ideas, Grade K Redleaf Press
Kindergarten Math: Getting started teaching your student math for the first time can seem overwhelming for some or a great adventure for others. Whatever your perspective, this curriculum/workbook has all that you need to get your student off to a great start! Attractive artwork, easy to understand instructions, and adequate spacing make this curriculum tailored to your student's beginning abilities. The curriculum is interactive with lots of coloring opportunities to delight your student and refresh their attention as they learn the meatier aspects of math. Your student will complete two full pages of learning activities per day that integrates several learning skills in each session. By working sequentially through the entire curriculum your student will be able to master all of the required math skills for this grade level mandated by state education departments. The curriculum begins with a variety of activities such as writing, reading, counting, and coloring skills that are developed while your student learns to recognize and write the numbers 1-20 as well as their names. Phonics based short sentences with number words are inserted periodically for your student to practice reading and for you to gain perspective of his or her growing accomplishments. Next, your student moves on to exercises that include: How many?, matching objects to numbers, counting groups of objects, and identifying objects in groups. After mastering number recognition your student will continue on to learning about number order. Number order will help your student with sequencing as well as with what comes before, after, and in between. This leads to being able to discern which number is most or least in a group of numbers as well as if numbers are the same or different. Learning about shapes is also an important part of a student's math experience. Your student will learn to identify shapes by how they are constructed. He or she will learn how to count shapes, sort shapes, and write the words for shapes. And there are plenty of opportunities to color and draw shapes throughout the workbook. Putting numbers and shapes together naturally prepares your student for the next unit of learning involving the telling of time. Your student will learn to recognize and tell time on both standard and digital clocks. The study of time includes minutes, quarter hours, half hours, hours, and learning to identify time before and after a pre-selected time. Finally, your student will learn to recognize and know the value of our American monetary coins. Your student will increase their counting and sorting skills by working with this currency. When your student closes the last page of this curriculum he or she will be well prepared for the next grade. This curriculum is in a workbook format that your student will consume with pleasure. The many pictures and activities will delight the learning process as well as ease its mastery. Flash cards for daily practice are included for you to cut out and use as needed. This spiral bound workbook lays flat for ease of use by young students.
