Initially designed as a fast medium bomber, the Junkers Ju 88 was also used as a Zerstörer heavy fighter by the Luftwaffe. It saw its combat debut over Poland in 1939, and heavy fighter variants saw action on every front up to VE Day. The ultimate Ju 88 fighter variant was the G-model of 1944, which boasted a FuG 220 or 227 radar, an astounding array of cannon and machine gun armament and advanced Junkers Jumo or BMW engines. A dedicated nightfighter, the first Ju 88G-1s entered service with the Nachtjagd in the summer of 1944, replacing Ju 88C/Rs as well as some Bf 110Gs. Despite suffering heavy losses in the final

months of the war, Ju 88Gs also inflicted serious casualties on Bomber Command throughout the war. From patrolling over the Bay of Biscay, to the Arctic circle opposing Allied convoys and, most successfully, as radar-equipped nightfighters engaging RAF heavy bombers during defence of the Reich operations from late 1941, this is the story of the Ju 88 aces who menaced Allied aircraft and shipping throughout World War 2.

Texans and Harvards in Latin America Schiffer Publishing

The Airfix Book of Scale Modelling is the essential guide to getting the most out of this fascinating and rewarding hobby, explaining how to build scale models to suit all levels of modelling skill. With full colour photography throughout, the book covers the history of modelling and of the Airfix company, and shows how injection moulded kits are made. It then describes and reviews the major modelling scales, as well as outlining the range of paints, tools

and accessories that are available. Chapters include guides to choosing a kit, tools for the job, painting, decals, conversions, figure-painting, dioramas and more. Common problems and how to solve them are addressed, and there is also a series of step-by-step construction projects, including expert builds of the F86 Sabre jet, the Aston Martin DBR9, a Panzer IV tank, the Airfix yeoman figure (reissued for the London 2012 Olympics), a Trafalgar class submarine and a scenic diorama.

Fighters of the Iron Cross Bloomsbury Publishing

While the Allies largely relied on mass production to help them win World War II, Germany put a great deal of their limited resources into new technologies and wonder weapons. In addition to these tangible assets, which were used with varying degrees of success, the drawing boards of Germany were littered with dozens of advanced designs that never reached the prototype or production stages. Many of these operational and paper projects advanced the pace and influenced the direction of aircraft development in the decades following World War II, with many of the German engineers responsible for these innovations seamlessly continuing their roles in the United States and the USSR. Modellers have had a long fascination for the Luftwaffe's jet arsenal and secret weapons of fact and fiction and this new Osprey Masterclass will explore the Luftwaffe jets and rocket planes that saw service at the end of World War II.

Canadian Aircraft of WWII Kagero

The P-47 Thunderbolt, affectionately nicknamed the 'Jug', was one of the most famous fighter aircraft of World War II. Used as both a high-altitude escort fighter and a low-level fighter-bomber, it quickly gained a reputation for being tough and resilient. Many

different air forces operated this plane, and it sported a wide range of camouflage schemes, finishes and markings, including stunning nose art. Modellers have been well served with Thunderbolt kits over the years, right up to the latest highly accurate releases. This book takes a step-by-step approach to modelling a wide variety of P-47 types in 1/48-scale, from 'Razorbacks' in USAAF colours to RAF T-bolts in the Far East. It provides expert advice on conversions (including a Bubbletop to a P-47M), adding aftermarket items, detailing, and ways to achieve top quality weathering and finishes.

Three in Thirteen Pen and Sword Military

The Focke-Wulf Fw 190 is regarded as one of the best fighters of World War II. Designed by Kurt Tank, it first saw combat in the summer of 1941 and went on to be produced in several variants. It remains a hugely popular subject for aviation scale-modellers. This book, the first of two to cover the Fw190, provides a detailed, step-by-step guide to modelling the Fw 190's A, F and G variants in 1/72, 1/48, and 1/32 scale. Key aspects such as creating mottled camouflage patterns, undercarriage and cockpit detailing, final weathering and finishing, and diorama bases to display your models are covered.

Sport Aviation Bloomsbury Publishing

Contains 124 extraordinary color profiles, portraying examples of nearly all types of single-seated fighter aircraft used by the Luftwaffe in World War II. All of the detailed profiles represent aircraft flown by German aces, some of the most famous and successful as well as those of lesser known. Also contains over 100 color illustrations of Luftwaffe unit markings, uniform insignia, camouflage colors, unit code styles, kill markings, and

related features.

Modelling Luftwaffe Jets and Wonder Weapons Casemate Publishers

R. C. ('Dick') Riley (1921-2006) was one of the country's foremost railway photographers; starting with mono just prior to World War 2, he moved over to colour in the early 1950s, when such film was both expensive and slow. Working in the banking industry gave him the opportunity to travel widely and, aided by his trackside pass and contacts within the railway industry, he was able to access locations and views from which many other photographers were excluded. From his early work through to the end of main line steam in 1968 he took countless thousands of transparencies; over the years a number have been published but there remain a significant number that have yet to see the light of day. This large landscape format book showcases over 200 colour images taken by Dick Riley between the early 1950s and 1968. Whilst the bias will be towards the Southern and Western regions, the book will also include a significant number of illustrations on both the Eastern and London Midland regions. Dick Riley was also a prolific photographer of industrial railways, and the book will include a brief selection featuring these sites, as well as recording aspects such as signs and minutiae, which were largely ignored by other photographers. The book will also include vignettes of these photographs. The text has been compiled by his close friend and executor Rodney Lissenden, who had access to Dick Riley's personal diaries for anecdotal tales relating to the images concerned.

Wings of the Luftwaffe Voyageur Press (MN)

The events of World War 2 proved beyond any doubt that the

strategic bombing campaign greatly contributed to the Allies' ultimate victory over Nazi Germany. British night bombing raids and daylight carpet bombing missions flown by the USAAF crews rained destruction on German cities killing thousands of civilians in the process. Amidst this massive loss of civilian life the destruction of German industrial targets seemed almost like a side note. The arms race that kicked off even before the war began produced military aircraft capable of reaching ever higher operational ceilings. At first thin air at high altitudes was the domain of reconnaissance machines, but before long fighter and bomber aircraft began to venture there as well. In those early days high-altitude flight was a challenging business: it required the use of pressurized cockpits and boosted powerplants capable of delivering adequate power at altitude.

Ju 88 Aces of World War 2 AK-INTERACTIVE, S.L.

Gunships: The Story of Spooky, Shadow, Stinger, and Spectre tells the dramatic story of transforming military cargo transports into deadly ground-attack aircraft used by the U.S. and other countries in worldwide conflicts from the Vietnam War to the

Middle East today. This comprehensive and detailed accounting of gunships begins with piston-powered, WWII-era C-47s and progresses to the four-engine turboprop C-130 Hercules, showing how gunships evolved from using 20mm miniguns to 105mm Howitzers with digital-age Battle Management Centers housed onboard. These highly effective airplanes made history by removing the safe haven of night operations from the enemy, and allowing strategic victory that might not have otherwise been possible. Author Wayne Mutza not only carefully researched all of these aircraft and their paths to reality, but also tells the tale of the brave and persevering men who believed in this unique weapon system and who saw its development through to the end. This book features a wealth of outstanding color photographs, many of which have never before been published, and also contains detailed appendices documenting gunship production data, combat units, and aircraft losses.

Modelling a Focke-Wulf Fw 190A-5 Bloomsbury Publishing

The Messerschmitt Bf 110 was undoubtedly one of the most significant aircraft of World War II. Despite suffering setbacks in the summer of 1940 at the hands of the RAF, it continued to be used effectively in other theatres and roles until the last days of the war, particularly as a night fighter against RAF Bomber Command's strategic bombing campaign over the Reich. This title shows you how to correct and convert basic 1/48-scale kits of the Bf 110 into many different variants, using a wide selection of aftermarket detail sets, conversions, accessories and decals for both day and night fighter schemes.

Frog Model Aircraft, 1932-1976 Bloomsbury Publishing

This “incredibly engaging and deeply personal” story of World War II pilot Joe Singleton “draws the reader into the dangerous world of night fighting” (Manhattan Book Review). Joe Singleton was an unlikely hero. A junior manager at a paints and varnish company at the outbreak of war, he was surprised to discover he had a hidden talent for flying. Despite RAF Fighter Squadrons crying out for replacements after the carnage of the Battle of Britain, Joe was posted to the rapidly developing world of night fighting. He flew first Defiants, then Beaufighters, finding himself in the thick of the very earliest stages of ground-controlled interception and airborne radar engagements. His skills finally began to bear fruit when piloting a Mosquito, and he took part in several successful missions. But the pinnacle came on the night of March 19, 1944: scrambling to intercept a big German raid on Hull, he located and shot down a Junkers 188, then went on to shoot down two more, all in the space of thirteen dramatic minutes. He and his navigator survived the crash-landing that ensued, and he went on to be feted as a national hero. *Three in Thirteen* is a unique sortie-by-sortie account of his journey from bewildered recruit to celebrated expert, illustrated with extracts from Joe’s RAF logbook and unpublished photographs and illustrations. Roger Dunsford’s extensive experience as an RAF pilot brings a vivid immediacy to Joe’s experiences, combined with astute analysis of the planes, the tactics, and the events of that fateful night. “Inspirational and thoroughly engaging—a true hero’s story.” —Books Monthly
