During the Meiji Era, of 1868-1912, British influence in Japan was stronger than that of any other foreign power. Although role models were sought from Englishmen and Scotsmen, whether diplomats, engineers, educators or philosophers, the first priority for the Japanese was to achieve a transfer of industrial and technical skills. As important customers, who brought good profits to

British industry, the Japanese were accommodated when they stipulated on awarding a contract that their own people should work in office, shipyard or factory. Much new research material discovered in Japan, England and Scotland has enabled the detailed examination of a relationship - with Britain as Senior and Japan as Junior partner - which lasted until 1914. It was on these foundations that Japan was able subsequently to build a great industrial nation.

An important tool for scientific study in any field is a formal language in which the phenomena can be described and hypotheses formulated. In this book a formal notation is developed for the description of the cognitive structure of arguments. The analyses based on this notation are more fine-grained than the analyses in previous attempts, and they are applicable not only to arguments but to all types of moves in a discourse.

Further, the notational system provides a basis for the description of relations between arguments and the structure of the discourse as a whole. In the final chapter, some empirical studies of retention of arguments in memory and of précis writing are reported, based on hypotheses formulated in terms of the notational system.

Beginning with a thorough discussion of the classical one-dimensional theory, this text considers the modern theory of Fourier series since Zygmund's classic study. It covers developments of the 1970s from Fefferman's famous disc counterexample to Cordoba's geometric theory.

This research product provides a thorough examination of the question: "How can the Army assess, develop, and retain strategic thinkers?" Expert input from within and outside the military provide a variety of perspectives that highlight areas of

convergence and divergence, as well as, exemplar techniques, processes and insights that inform and change the conceptualization and practice of strategic thinking in the military. This compendium does not provide the answer to all of the Army's strategic thinking challenges, but it does provide many possible avenues to explore with the goal of enhancing the Army's strategic thinking capabilities. Topics and subjects covered include: qualitative thinking, metacognitive ability, cognitive flexibility, abductive reasoning, system theory, critical thinking, visualization, PME curriculum, strategic theory. Examination of literature on strategic thinking does not lead to one common definition of strategic thinking. However, there are some identified common attributes of strategic thinking. Strategic thinking is built on a systems perspective,

intent driven, hypothesis driven, intelligently opportunistic (capitalizing on new possibilities as the situation changes), and involves the ability to think in time (linking past, present, and future elements). The confusion about the definition of strategic thinking is exacerbated by the confounded concepts of strategic thinking, strategic planning, strategy, and the strategic thinker. In addition to the lack of common definition of strategic thinking, Heracleous notes that there is no common definition of strategic planning or common understanding of the relationship between strategic thinking and strategic planning. Liedtka outlines several differences between strategic thinking and strategic planning that include reliance on systems thinking, the role of measurement and control, and a focus on the outcome (strategy) versus the process. For the purpose of this compendium, we have focused extensively on concepts related to strategic thinking (cognitive processes) and the strategic thinker (characteristics of a

person). This work does not extensively address the concepts of strategy (outcome) or strategic planning (programmatic, analytical process). Strategic thinking in the military comes with unique challenges and opportunities. It is different than strategic thinking in the private sector. LANGUAGE TRAINING The ability to speak a foreign language is a core unconventional warfare skill and is being incorporated throughout all phases of the qualification course. The students will receive their language assignment after the selection phase where they will receive a language starter kit that allows them to begin language training while waiting to return to Fort Bragg for Phase II. The 3rd Bn, 1st SWTG (A) is responsible for all language training at the USAJFKSWCS. The Special Operations Language Training (SOLT) is primarily a performance-oriented language course. Students are trained in one of ten core languages

with enduring regional application and must show proficiency in speaking, listening and reading. A student receives language training throughout the Pipeline. In Phase IV, students attend an 8 or 14 week language blitz depending upon the language they are slotted in. The general purpose of the course is to provide each student with the ability to communicate in a foreign language. For successful completion of the course, the student must achieve at least a 1/1/1 or higher on the Defense Language Proficiency Test in two of the three graded areas; speaking, listening and reading.

Charles Maier, one of the most prominent contemporary scholars of European history, published *Recasting Bourgeois Europe* as his first book in 1975. Based on extensive archival research, the book examines how European societies progressed from a moment of social vulnerability to one of political and economic stabilization. Arguing that a common trajectory calls for a multi country analysis, Maier provides a comparative history of three European nations and argues that they did not simply return to a prewar status quo, but achieved a new balance of state authority and interest group representation. While most previous accounts

presented the decade as a prelude to the Depression and dictatorships, Maier suggests that the stabilization of the 1920s, vulnerable as it was, foreshadowed the more enduring political stability achieved after World War II. The immense and ambitious scope of this book, its ability to follow diverse histories in detail, and its effort to explain stabilization—and not just revolution or breakdown—have made it a classic of European history.

This book is an outgrowth of lectures given on several occasions at Chalmers University of Technology and Goteborg University during the last ten years. As opposed to most introductory books on complex analysis, this one assumes that the reader has previous knowledge of basic real analysis. This makes it possible to follow a rather quick route through the most fundamental material on the subject in order to move ahead to reach some classical highlights (such as Fatou theorems and some Nevanlinna theory), as well as some more recent topics (for example, the corona theorem and the H^1 -BMO duality) within the time frame of a one-semester course. Sections 3 and 4 in Chapter 2, Sections 5 and 6 in Chapter 3, Section 3 in Chapter 5, and Section 4 in Chapter 7 were not contained in my original lecture notes and therefore might be considered special topics. In addition, they are completely independent and can be omitted with no loss of continuity. The order of the topics in the exposition coincides to a large degree with historical developments. The first five chapters

essentially deal with theory developed in the nineteenth century, whereas the remaining chapters contain material from the early twentieth century up to the 1980s. Choosing methods of presentation and proofs is a delicate task. My aim has been to point out connections with real analysis and harmonic analysis, while at the same time treating classical complex function theory.

The narrative around flexible working needs flipping. After being able to work flexibly for 14 of her 23 years in education across teaching, school leadership and MAT leadership roles, Emma Turner realised that sadly, she's actually in the minority and has just been kinda lucky. Across the education system, although there is a recent groundswell of support for developing more life friendly, innovative and flexi ways of working, there are still a great deal of misconceptions, biases and prejudices about flexible working and flexible workers. Through her 'playlist' of educational floor fillers, Emma explores some of the successful ways in which flexible working can be viewed by both employers and employees for staff at all levels, including senior and school leadership. Designed to open up the flexible working conversation, this book outlines what can work, what has worked and what could work. This new

way of viewing the flexible narrative from an experienced flex-pert encourages all to revisit our views on flexible working.

the Federalist Papers, the Articles of Confederation, the U.S. Constitution, and the Amendments to the U.S. Constitution features supporting essays in which leading scholars provide historical context and analysis. An introduction by Ian Shapiro offers an overview of the publication of the Federalist Papers and their importance. In three additional essays, John Dunn explores the composition of the Federalist Papers and the conflicting agendas of its authors; Eileen Hunt Botting explains how early advocates of women's rights, most prominently Mercy Otis Warren, Judith Sargent Murray, and Charles Brockden Brown, responded to the Federalist-Antifederalist debates; and Donald Horowitz discusses the Federalist Papers from the perspective of recent experiments with democracy and constitution-making around the world. These essays both illuminate the original texts and encourage active engagement with them. Special reports. Procedural history Jeffrey Frank Jones The passage of Citizens United by the Supreme
