"The last 30 years have

been dramatic for the financial services industry. In the 1990s and 2000s, boundaries between the traditional industry sectors, such as commercial banking and investment banking, broke down and competition became increasingly global in nature. Many forces contributed to this breakdown in interindustry and intercountry barriers, including financial innovation, technology, taxation, and regulation. Then in 2008-2009, the

financial services industry experienced the worst financial crisis since the Great Depression. Even into the mid-2010s, the U.S. and world economies have not recovered from this crisis. It is in this context that this book is written. As the economic and competitive environments change, attention to profit and, more than ever, risk become increasingly important. This book offers a unique analysis of the risks faced by investors and savers interacting through both

financial institutions and financial markets, as well as strategies that can be adopted for controlling and better managing these risks. Special emphasis is also put on new areas of operations in financial markets and institutions such as asset securitization, off-balance-sheet activities, and globalization of financial services"--

A Global View John Wiley & Sons

markets are not just driven by the big investment houses and fund managers. Along with these, private banks, insurance houses, hedge funds, sovereign wealth funds and a range of boutique investment managers, regional institutions and brokers of different sizes and nationalities all operate and interact to form the bedrock of the global financial infrastructure. It explains the core financial market business of these institutions and considers how they have become

the firms that we see today, providing readers with a clear understanding of which market sectors are likely to see the most involvement from the different types of institution and, importantly, why they are involved in these market areas. Key features include: a series of case studies looking at examples of some of these institutions including an explanation of the EIB and the UK agency UKFI. They also look at the financial crisis

and the impact on AIG and Northern Rock, two institutions that clearly illustrate what can go wrong and how the other market players have to step in when this happens. an international perspective looking at representative institutions from Europe, Asia and North America, showing global similarities and differences. a Post Financial Crisis perspective on the structure of international banks in today's markets. coverage of the major players on both the buy

Market Players MIT Press Behavioral finance presented in this book is the second-generation of behavioral finance. The first generation, starting in the early 1980s, largely accepted standard finance's notion of people's wants as "rational" wants—restricted to the utilitarian benefits of high returns and low risk. That first generation commonly described people as

"irrational"—succumbing to cognitive and emotional errors and misled on their way to their rational wants. The second generation describes people as normal. It begins by acknowledging the full range of people's normal wants and their benefits—utilitarian, expressive, and emotional—distinguishes normal wants from errors, and offers guidance on using shortcuts and avoiding errors on the way to satisfying normal wants. People's normal

wants include financial security, nurturing children and families, gaining high social status, and staying true to values. People's normal wants, even more than their cognitive and emotional shortcuts and errors, underlie answers to important questions of finance, including saving and spending, portfolio construction, asset pricing, and market efficiency.
