The majority of existing innovation textbooks either discuss innovation in an all to general way or lean towards a general management or technology perspective. This book combines the fields of marketing and innovation management, acknowledging that marketing plays an important and proactive role in radical product, brand and market innovaton processes.

Structured around two key themes - 'Knowledge, Processes and Capabilities for Market Creation' and 'Co-Creation of Meaningful Experiences with Customers', this book fills an important gap in the market.

Globalization has created an

interconnected world, but has not diminished violence and militarism. The Economics of Killing describes how the power of global elites, entrenched under globalization, has created a deadly cycle of violence. In this groundbreaking work, Vijay Mehta shows how attempts at peaceful national development are routinely blocked by Western powers. He centers the 2008 financial crisis in US attempts to block China's model of development. He shows how Europe and the US conspire with regional dictators to prevent countries from developing advanced industries, and how this system has fed terrorism. Mehata argues that a different world is possible, based on policies of disarmament, demilitarization, and sustainable development. This original and thought-

provoking book will be of great interest to anyone concerned about the consequences of endless war fueled by the West.

The phrase "creation ex nihilo" refers to the primarily Christian notion of God's creation of everything from nothing. *Creation ex nihilo: Origins, Development, Contemporary Challenges* presents the

findings of a joint research project at Oxford University and the University of Notre Dame in 2014-2015. The doctrine of creation ex nihilo has met with criticism and revisionary theories in recent years, from the worlds of science, theology, and philosophy. This volume concentrates on several key areas: the relationship of the doctrine to its purported biblical sources, how the doctrine emerged in the first several centuries of the Common Era, why the doctrine came under heavy criticism in the modern era, how some theologians have responded to the objections, and the relationship of the doctrine to claims of modern science, for example, the fundamental law of physics that matter cannot be created from nothing. Although the Bible never expressly

states that God made everything from nothing, various texts are taken to imply that the universe came into existence by divine command and was not assembled from preexisting matter or energy. The contributors to this volume approach this topic from a range of perspectives, from exposition to defense of the doctrine itself. This is a unique and fascinating work whose aim is to present the reader with a compelling set of arguments for why the doctrine should remain central to the grammar of contemporary Christian theology. As such, the book will appeal to theologians as well as those interested in the relationship between theology and science. Contributors: Gary A. Anderson, Markus Bockmuehl, Janet Soskice, Richard J.
