BSAVA Manual of Canine Practice John Wiley & Sons

This, the second edition of the BSAVA Manual of Canine and Feline Musculoskeletal Imaging, has been

extensively updated reflecting the dramatic changes that have taken place in radiography over the past 10 years. With the increasing availability of digital radiography in general veterinary practice and a greater accessibility to cross-sectional imaging techniques the editors have included five new chapters covering the basics of the different imaging modalities with particular reference to their use in musculoskeletal imaging. Comparisons are drawn between the different techniques and a generous use of illustrations and images bring an example driven clarity and understanding to the written word. As in the previous edition, the manual is structured along

anatomical lines and the updated chapters have all been expanded to include more ultrasound as well as CT, MRI and scintigraphy. The practical nature of the manual makes it ideal for use in general practice as well as being a rich source of information for students and newly qualified veterinary surgeons. However, the depth of information supplied by an international panel of authors makes the BSAVA Manual of Canine and Feline Musculoskeletal Imaging second edition a useful reference for orthopaedic surgeons and specialist radiologists. Additionally, there is an accompanying CD featuring video clips as well as all the images

used throughout the manual. *BSAVA Manual of Canine and Feline Reproduction and Neonatology* BSAVA Following the success of previous editions, the BSAVA Manual of Canine and Feline Dentistry and Oral Surgery 4th edition is a timely publication in what is an internationally growing specialist field. It is an accessible source of core information for general small animal veterinary surgeons, students and nurses/technicians interested in developing their knowledge and practical skills in dentistry and oral surgery. New for this edition are the inclusion of step-by-step operative techniques with

detailed full-colour photographs and new illustrations, including the process for taking dental radiographs, and techniques for the management of periodontal disease, dental and oral trauma, developmental disorders and neoplasia, and closed and open tooth extractions.

Companion animals are undergoing previously un contemplated treatments and surviving what would once have been rapidly fatal conditions. This NEW Manual is aimed at the whole veterinary team, drawing on all their skills to help patients achieve as full a function and quality of life as possible after surgery, trauma or disease, and to

manage chronic conditions effectively for the benefit of animal, owner and the practice team. Part One discusses the principles of rehabilitation, supportive and palliative care. The science behind pain and its management, clinical nutrition and physical therapies is explored, and clinical applications reviewed with reference to published evidence of efficacy and/or effectiveness. In Part Two, this truly innovative Manual presents a collection of Case Studies across a range of canine and feline patients - from discospondylitis to glaucoma in dogs and from triaditis to leg amputation in cats. The following are considered for every

case, with expert assessment from the contributors to Part One of the book: • Acute and chronic pain management • Fear, stress and conflict concerns • Nutritional requirements • Physiotherapy • Hydrotherapy • Acupuncture • Nursing and supportive care • Owner advice and homecare recommendations. BSAVA Manual of Canine and Feline Ophthalmology BSAVA This new edition of the popular manual expands on the conditions covered in the second edition; common problems are assessed and the various treatment options considered. Guidance on long-term management of chronic conditions has also been expanded

and extensively revised. Increased focus on diagnostic techniques for chronic kidney disease and incontinence Chapters covering the management of urinary incontinence and glomerulopathies Features a new chapter on kidney injury

physical principles of ultrasonography and discusses the equipment required as well as the general principles of the ultrasound examination. It then moves on to discuss body systems in individual chapters, with each chapter following a similar format:

- Indications

Dermatology constitutes a large percentage of the daily caseload in small animal practice and can represent a challenge for the busy practitioner, as many different diseases have similar presenting signs. For this reason, a structured understanding of how to approach a dermatological case is essential for a successful outcome. The 4th edition of the BSAVA Manual of Canine and Feline Dermatology has been completely updated, chapters have been

expanded and structurally divided to include the management of specific diseases and common dermatological cases, such as ectoparasite infestation and its treatment and prophylaxis, atopic dermatitis and its management, superficial and deep pyoderma and their treatment, feline-specific conditions and their management, autoimmune and immune-mediated diseases and a targeted management, etc. New chapters have also been added to this new edition, such as topical treatments, nutrients of the skin and regional dermatoses. The manual begins by providing the reader with a grounding in

examination and investigative techniques, including a new chapter on cytology. The second section focuses on a problem-oriented approach to common dermatological conditions and their management. The final part of the manual covers the major skin diseases of dogs and cats.

BSAVA Manual of Canine and Feline

This unique book, written by specialists from the UK, the USA, Canada, Australia and South Africa, bridges the disciplines of clinical pathology, internal medicine and critical care in a single volume. The Manual is divided into three sections: haematology, haemostasis and transfusion medicine. Within each section, review chapters are augmented by contributions on selected topics of interest to the practitioner. Methods of sample collection and interpretation for

routine haematology, haemostatic function and bone marrow analysis are reviewed and new developments, such as flow cytometry for typing leukaemias, outlined. The diagnosis and management of a range of major infectious, immune-mediated and neoplastic diseases of the haematopoietic system are discussed. A chapter on canine babesiosis is timely, given the recent reports of cases in the UK, and a chapter is also included on the feline pathogen *Haemobartonella felis*. A wealth of excellent colour photographs throughout the book illustrates cell types and abnormalities, plus techniques such as blood transfusion. The range of coverage and

the practical information in this Manual will render it of great value in the practice setting.
