The story of the Edison Schools is a gripping tale of money, kids, and greed. What began in the 1980s as an enterprise to transform public schools quickly became a troubled business battling falling test scores and dismal stock prices. How did the most ambitious for-profit education company in U.S. history lose respect, money, and credibility in such a short time? Revealing how American McEducation went from glory to crisis, The Edison Schools tracks entrepreneur Christopher Whittle's plan to introduce a standardized nationwide curriculum and cut administrative waste. Education

specialist Kenneth J. Saltman finds that the critics' predictions came true in Edison schools across the country: Experienced teachers left in droves, students were virtually given answers to standardized tests to drive up scores, and difficult students were "counseled" out.

Being an inventor at the dawning of the twentieth century was an exciting time for Weston Fulton, Tennessee's most prolific. The Industrial Revolution was well underway, and technology was changing rapidly. Because of Fulton's numerous inventions and patent requests, the U.S. Patent Office dedicated a room solely to his applications, and the press began calling

him the "Edison of the South." His most important invention, the seamless metal bellows, has gone to the bottom of the sea as the triggering device for the U.S. Navy's depth charges and to the surface of the Moon to help supply drinking water for the astronauts. Dewaine Speaks, a longtime employee of the company founded by Fulton, gives a detailed description of the many ways Fulton's inventions have influenced mankind.

Giving Kids the Business exposes the ways in which corporate America is turning schools into profit centers, the curriculum into an advertising vehicle, and children into a cash crop. Learn how market-oriented school reforms take money out of your pocket and lower the

quality of public education. This book sounds the alarm over schools being used by marketers to pitch their products to our nations children. }The commercialization of public education is upon us. With much fanfare and plenty of controversy, plans to cash in on our public schools are popping up all over the country. Educator and social commentator Alex Molnar has written the first book to both document the commercial invasion of public education and explain its alarming consequences. Imagine that your son is given a Gushers fruit snack, told to burst it between his teeth, and asked by his teacher to compare the sensation to a geothermic eruption (compliments of General Mills). Imagine your daughter being taught a lesson about self-esteem

by being asked to think about good hair days and bad hair days (compliments of Revlon.) Imagine that to cap off a day of world class learning, your child's teacher shows a videotape that explains that the Valdez oil spill wasn't so bad after all (compliments of Exxon). Giving Kids the Business explains why hot-button proposals like Channel One, an advertising-riddled television program for schools; for-profit public schools run by companies such as the Edison Project and Education Alternatives, Inc.; taxpayer-financed vouchers for private schools; and the relentless interference of corporations in the school curriculum spell trouble for America's future. Anyone curious about how schools are being turned into marketing vehicles, how education is being recast as a

commercial transaction, and how children are being cultivated as a cash crop will want to read Giving Kids the Business. } The commercialization of public education is upon us. With political races, legislative issues, and judicial challenges regarding education reform from Massachusetts to California, this book will explain what's behind the

headlines in every state.
