SDL, a Process for Developing Demonstrably More Secure Software South Western Educational Publishing
 The real challenge of programming isn't learning a language's syntax—it's learning to creatively solve problems so you can build something great. In this one-of-a-kind text, author V. Anton Spraul breaks down the ways that programmers solve problems and teaches you what other introductory books often ignore: how to Think Like a Programmer. Each chapter tackles a single programming concept, like classes, pointers, and recursion, and open-ended exercises throughout challenge you to apply your knowledge. You'll also learn how to: -Split problems into discrete components to make them easier to solve -Make the most of code reuse with functions, classes, and libraries -Pick the perfect data structure for a particular job -Master more advanced programming tools like recursion and dynamic memory -Organize your thoughts and develop strategies to tackle particular types of problems Although the book's examples are written in C++, the creative problem-solving concepts they illustrate go beyond any particular language; in fact, they often reach outside the realm of computer science. As the most skillful programmers know, writing great code is a creative art—and the first step in creating your masterpiece is learning to Think Like a Programmer.

From New York Times bestselling author and senior economic correspondent at The New York Times, how to survive—and thrive—in this increasingly challenging economy. Every ambitious professional is trying to navigate a perilous global economy to do work that is lucrative and satisfying, but some find success while others struggle to get by. In an era of remarkable economic change, how should you navigate your career to increase your chances of landing not only on your feet, but ahead of those around you? In *How to Win in a Winner-Take-All World*, Neil Irwin, senior economic correspondent at the New York Times, delivers the essential guide to being successful in today's economy when the very notion of the "job" is shifting and the corporate landscape has become dominated by global firms. He shows that the route to success lies in cultivating the ability to bring multiple specialties together—to become a "glue person" who can ensure people with radically different technical skills work together effectively—and how a winding career path makes you better prepared for today's fast-changing world. Through original data, close analysis, and case studies, Irwin deftly explains the 21st century economic landscape and its implications for ambitious people seeking a lifetime of professional success. Using insights from global giants like Microsoft, Walmart, and Goldman Sachs, and from smaller lesser known organizations like those that make cutting-edge digital effects in Planet of the Apes movies or Jim Beam bourbon, *How to Win in a Winner-Take-All World* illuminates what it really takes to be on top in this world of technological complexity and global competition.
